**KX-FL612CX-S**

(for Asia, Middle Near East and Africa)

(for Saudi Arabia )

## **⚠ WARNING**

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

When you note the serial number, write down all of the 11 digits. The serial number may be found on the bottom of the unit.

## **IMPORTANT INFORMATION ABOUT LEAD FREE, (PbF), SOLDERING**

If lead free solder was used in the manufacture of this product the printed circuit boards will be marked PbF.

Standard leaded, (Pb), solder can be used as usual on boards without the PbF mark.

When this mark does appear please read and follow the special instructions described in this manual on the use of PbF and how it might be permissible to use Pb solder during service and repair work.

# 1 INTRODUCTION

## 1.1. ABOUT LEAD FREE SOLDER (PbF: Pb free)

### Note:

In the information below, Pb, the symbol for lead in the periodic table of elements, will refer to standard solder or solder that contains lead.

We will use PbF solder when discussing the lead free solder used in our manufacturing process which is made from Tin, (Sn), Silver, (Ag), and Copper, (Cu).

This model, and others like it, manufactured using lead free solder will have PbF stamped on the PCB. For service and repair work we suggest using the same type of solder although, with some precautions, standard Pb solder can also be used.

### Caution

- PbF solder has a melting point that is 50° ~ 70° F, (30° ~ 40°C) higher than Pb solder. Please use a soldering iron with temperature control and adjust it to 700° ± 20° F, (370° ± 10°C). In case of using high temperature soldering iron, please be careful not to heat too long.
- PbF solder will tend to splash if it is heated much higher than its melting point, approximately 1100°F, (600°C).
- If you must use Pb solder on a PCB manufactured using PbF solder, remove as much of the original PbF solder as possible and be sure that any remaining is melted prior to applying the Pb solder.
- When applying PbF solder to double layered boards, please check the component side for excess which may flow onto the opposite side (See figure, below).

### 1.1.1. SUGGESTED PBF SOLDER

There are several types of PbF solder available commercially. While this product is manufactured using Tin, Silver, and Copper, (Sn+Ag+Cu), you can also use Tin and Copper, (Sn+Cu), or Tin, Zinc, and Bismuth, (Sn+Zn+Bi). Please check the manufacturer's specific instructions for the melting points of their products and any precautions for using their product with other materials.

The following lead free (PbF) solder wire sizes are recommended for service of this product: 0.3mm, 0.6mm and 1.0mm.

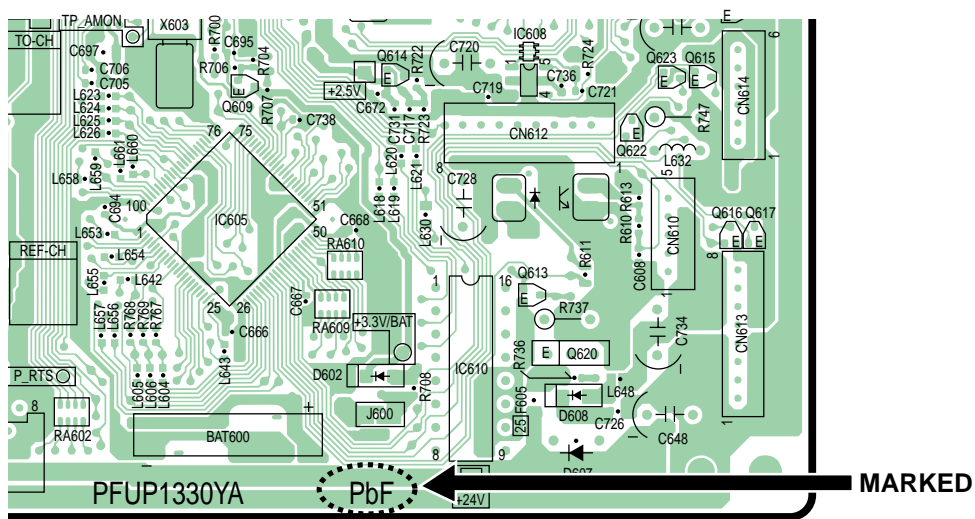

## 1.2. HOW TO RECOGNISE THAT Pb FREE SOLDER IS USED

P.C.Boards marked as "PbF" use Pb Free solder. (See the figure below.)

Pb Free is not used the Power Supply Board of this unit.

(Example :Digital board)

KX-FL512CX DIGITAL BOARD (PCB4) COMPONENT VIEW

**Note :** The "PbF" marked may be found on different areas of the same P.C.Board,depending on manufacture date.

### 1.3. SAFETY PRECAUTIONS

1. Before servicing, unplug the AC power cord to prevent an electric shock.
2. When replacing parts, use only the manufacturer's recommended components.
3. Check the condition of the power cord. Replace if wear or damage is evident.
4. After servicing, be sure to restore the lead dress, insulation barriers, insulation papers, shields, etc.
5. Before returning the serviced equipment to the customer, be sure to perform the following insulation resistance test to prevent the customer from being exposed to shock hazards.

### 1.4. INSULATION RESISTANCE TEST

1. Unplug the power cord and short the two prongs of the plug with a jumper wire.
2. Turn on the power switch.
3. Measure the resistance value with an ohmmeter between the jumpered AC plug and each exposed metal cabinet part (screw heads, control shafts, bottom frame, etc.).

Note: Some exposed parts may be isolated from the chassis by design. These will read infinity.

4. If the measurement is outside the specified limits, there is a possibility of a shock hazard.

### 1.5. FOR SERVICE TECHNICIANS

**ICs and LSIs are vulnerable to static electricity.**

**When repairing, the following precautions will help prevent recurring malfunctions.**

1. Cover the plastic part's boxes with aluminum foil.
2. Ground the soldering irons.
3. Use a conductive mat on the worktable.
4. Do not touch the IC or LSI pins with bare fingers.

### 1.6. BATTERY CAUTION

#### CAUTION

There is a danger of explosion if the battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Dispose used batteries according to the manufacturer's instructions:

The lithium battery is a critical component (type No. CR-2032/V9A). Please observe for the proper polarity and exact location when replacing and soldering the replacement battery.

## 1.7. AC CAUTION

For safety, before closing the lower cabinet, please make sure of the following precautions.

1. The earth lead is fixed with the screw.
2. The AC connector is connected properly.
3. Wind the earth lead around the core 4 times.
4. Wind the earth AC around the core 4 times.

## 1.8. PERSONAL SAFETY PRECAUTIONS

### 1.8.1. MOVING SECTIONS OF THE UNIT

Be careful not to let your hair, clothes, fingers, accessories, etc., become caught in any moving sections of the unit.

The moving sections of the unit are the rollers and a gear. There is a separation roller and a document feed roller which are rotated by the document feed motor. A gear rotates the two rollers. Be careful not to touch them with your hands, especially when the unit is operating.

### 1.8.2. LIVE ELECTRICAL SECTIONS

All the electrical sections of the unit supplied with AC power by the AC power cord are live. Never disassemble the unit for service with the AC power supply plugged in.

**CAUTION:**

AC voltage is supplied to the primary side of the power supply unit. Therefore, always unplug the AC power cord before disassembling for service.

### 1.8.3. LASER BEAM AND FUSER UNIT SECTION

- The printer of this unit utilizes a laser. Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.
- The fuser unit is inside of the unit and gets hot. Do not touch it when removing the jammed paper or cleaning the lower glass.

**Fuser unit**

The fuser unit gets hot. Do not touch it. During or immediately after printing, the area near the recording paper exit (1) also gets warm. This is normal.

(BOTTOM VIEW)

## 1.9. SERVICE PRECAUTIONS

### 1.9.1. PRECAUTIONS TO PREVENT DAMAGE FROM STATIC ELECTRICITY

Electrical charges accumulate on a person. For instance, clothes rubbing together can damage electric elements or change their electrical characteristics. In order to prevent static electricity, touch a metallic part that is grounded to release the static electricity. Never touch the electrical sections such as the power supply unit, etc.

**Electrostatic Discharge!**

### 1.10. FOR BEST PERFORMANCE

- To extend the life of the drum unit, the unit should never be turned OFF immediately after printing. Leave the power turned ON for a minimum of 30 minutes after printing.
- In the printing process, heat is used to fuse toner onto the page. As a result, it is normal for the machine to produce an odor during and shortly after printing. Be sure to use this unit in an area with proper ventilation.
- Do not cover slots or openings on the unit. Inspect the air circulation vents regularly and remove any dust build-up with a vacuum cleaner.
- If the inside of the unit is dirty, clean it with a soft and dry cloth (especially the lower glass).
- When replacing the toner cartridge or drum unit, do not allow dust, water, or liquids to come in contact with the drum. This may affect print quality.
- Store unused paper in the original packaging, in a cool and dry place. Not doing so may affect print quality.
- Do not place the unit in an area where the paper tray may be obstructed (i.e., by a wall, etc.).
- Keep the air circulation vents away from walls etc. more than 50 mm (1 31 / ") to let the unit cool down.

## 2 FEATURES AND SPECIFICATIONS

### 2.1. FEATURES

#### General

- Help function
- Display:
  1. BASIC SETTINGS
  2. FEATURE LIST
  3. DIRECTORY
  4. FAX SENDING/RECEIVING
  5. COPIER
  6. REPORTS
  7. CALLER ID
- LCD (Liquid Crystal Display) readout
- TAM (Telephone answering machine) interface

#### Plain Paper Facsimile Machine

- Letter/A4/Legal, G3 compatible
- Automatic document feeder (20 sheets)
- Quick scan
- Resolution: Standard/Fine/Super fine/Photo/Photo with text.  
(64 level)
  - STANDARD: For printed or typewritten originals with normal-sized characters.
  - FINE: For originals with small printing.
  - SUPER FINE: For originals with very small printing.
  - PHOTO: For originals containing photographs, shaded drawing, etc.
  - PHOTO WITH TEXT: For originals containing photograph and text.
- Broad cast
- 250-sheet paper capacity (60 g/m<sup>2</sup>~ 75 g/m<sup>2</sup>)
- Distinctive ring detection.

#### Integrated Telephone System

- On-hook dialing
- Monitor speaker
- Voice muting
- Redialing function
- Station telephone directory

#### Enhanced Copier Function

- Multi-copy function (up to 99 copies)
- Enlargement and reduction
- Collate
- 64-Level halftone

## 2.2. SPECIFICATIONS

<b>Applicable Lines:</b>	Public Switched Telephone Network
<b>Document Size:</b>	Max. 216 mm in width Max. 600 mm in length
<b>Effective Scanning Width:</b>	208 mm
<b>Effective Printing Width:</b>	A4 : 202mm Letter/Legal : 208mm
<b>Transmission Time*:</b>	Approx. 6 s/page (ECM-MMR)** Approx. 8 s/page (ECM-MMR)***
<b>Scanning Density:</b>	Horizontal: 8 pels/mm (203 pels/inch) Vertical: 3.85 lines/mm -STANDARD 7.7 lines/mm -FINE/PHOTO/PHOTO WITH TEXT 15.4 lines/mm -SUPER FINE
<b>Halftone Level:</b>	64-level
<b>Scanner Type:</b>	Contact Image Sensor (CIS)
<b>Printer Type:</b>	Laser printer
<b>Data Compression System:</b>	Modified Huffman (MH), Modified READ (MR), Modified, Modified READ (MMR)
<b>Modem Speed:</b>	14,400/12,000/9,600/7,200/4,800/2,400 bps; Automatic Fallback
<b>Operating Environment:</b>	10°C—32.5°C, 20—80% RH (Relative Humidity)
<b>Dimensions (H×W×D):</b>	370 mm × 430 mm × 480 mm
<b>Mass (Weight):</b>	Approx. 9.2 kg
<b>Power Consumption:</b>	Standby: Approx. 4 W Transmission: Approx. 12W Reception: Approx. 290 W Copy: Approx. 290 W Maximum: Approx. 950W (When the fuser lamp turns on)
<b>Power Supply:</b>	220-240 V AC, 50/60Hz
<b>Memory Capacity:</b>	Approx. 120 pages of memory transmission. Approx. 170 pages of memory reception. (Based on ITU-T No. 1 Test Chart in standard resolution.)
<b>Laser diode properties:</b>	Laser output: Max. 5 mW Wave length: 760 nm—800 nm Emission duration: Continuous
<b>Print Speed:</b>	14 ppm (page per minute)
<b>Printing Resolution:</b>	600 × 600 dpi

\* Transmission speed depends upon the contents of the pages, resolution, telephone line conditions and capability of the other party's machine.

\*\* Transmission speed is based upon the Original Test Chart. (Refer to **ORIGINAL TEST CHART**(P.216).) If the capability of the other party's machine is inferior to your unit, the transmission time may be longer.

\*\*\* Transmission speed is based upon the ITU-T No. 1 Test Chart and original mode. (Refer to **ITU-T No.1 TEST CHART**(P.217).) If the capability of the other party's machine is inferior to your unit, the transmission time may be longer.

**Note:**

- Any details given in these instructions are subject to change without notice.
- The pictures and illustrations in these instructions may vary slightly from the actual product.

Design and specifications are subject to change without notice.

## 2.3. OPTIONAL ACCESSORIES

Model No.	Description	Specifications
KX-FA83E or KX-FA83A	Toner cartridge	1 toner cartridge
KX-FA84E or KX-FA84A	Drum unit	1 drum unit

## 3 INSTALLATION

### 3.1. LOCATION OF CONTROLS

#### 3.1.1. OVERVIEW

### 3.1.2. CONTROL PANEL

## 3.2. CONNECTIONS

- (1) Connect the handset cord.
  - (2) Connect the telephone line cord.
  - (3) Connect the power cord.
- When the power is turned on for the first time, the unit will print some basic information.

### Caution:

- When you operate this product, the power outlet should be near the product and easily accessible.
- Be sure to use the telephone line cord included in this unit..
- Do not extend the telephone line cord.

### Note:

- To avoid malfunction, do not position fax machine near appliances such as TVs or speakers which generate an intense magnetic field.
- If any other device is connected on the same line, this unit may disturb the network condition of the device.

### 3.3. INSTALLATION

#### 3.3.1. INSTALLATION SPACE

The space required to install the unit is shown below.

The dimensions given are necessary for the unit to operate efficiently.

**Note:**

- Avoid excessive heat or humidity.
- Use the unit within the following ranges of temperature and humidity.
- Ambient temperature: 10°C to 32.5°C
- Relative humidity: 20% to 80% (without condensation)
- Power cord length should be less than 5 meters (16.4 feet). Using a longer cord may reduce the voltage or cause malfunctions.
- Avoid direct sunlight.
- Do not install near devices which contain magnets or generate magnetic fields.
- Do not subject the unit to strong physical shock or vibration.
- Keep the unit clean. Dust accumulation can prevent the unit from functioning properly.
- To protect the unit from damage, hold both sides when you move it.
- Do not place the unit in an area where the paper tray may be obstructed (i.e., by a wall, etc.)
- Keep this surface (Ⓜ) away from walls etc. more than 50 mm to let the unit cool down.

### 3.3.2. PAPER STACKER

Line up the slots (①) in the paper stacker with the pegs (②) on the bottom of the unit, then insert the two tabs of the paper stacker into the slots on the unit (③).

- Do not place the unit in an area where the paper stacker may be easily bumped into.
- Document and recording paper will be ejected from the front of the unit. Do not place anything in front of the unit.
- The paper stacker can hold up to approximately 100 sheets of printed paper. Remove the printed paper before the paper stacker becomes full.

### 3.3.3. DOCUMENT STACKER

Pull the document stacker (①) forward gently until it clicks into place, then press the center part of the document stacker (②) to open the extender (③).

### 3.3.4. PAPER TRAY AND PAPER TRAY COVER

1. Insert the paper tray (①) into the slot (②) on the back of the unit.

2. Pull the tension plate forward (①) and attach the paper tray cover (②), then push the tension plate back (③).

When you use legal paper, do not attach the paper tray cover.

**Note:**

- Do not place the unit in an area where the paper tray may be obstructed (i.e., by a wall etc.).
- Keep this surface (④) away from walls etc. more than 50 mm (1 31/32") to let the unit cool down.

**To remove the paper tray**

Pull the paper tray forward in the direction of the arrow.

### 3.3.5. INSTALLING THE RECORDING PAPER

A4, Letter or legal size recording paper can be used for fax messages. The unit can hold up to 250 sheets of 60/75 g/m<sup>2</sup> to paper, 230 sheets of 80 g/m<sup>2</sup> or 200 sheets of 90 g/m<sup>2</sup> paper. See the note for paper specifications.

- The unit is set for A4 size paper by default. If you want to use legal or letter size paper, change the setting (feature #16).

1. Before inserting a stack of paper, fan the paper to prevent paper jams.

2. Pull the tension plate forward (1).

3. Remove the paper tray cover (1).

4. Insert the paper, print-side down (①).
- The paper should not be over the tabs (②).
  - If the paper is not inserted correctly, readjust the paper, or the paper may jam.

Correct

Incorrect

5. Attach the paper tray cover (①).

6. Push the tension plate back (①).

#### To use A4 size paper

Insert the tabs on the A4 paper guides (①) into the slots.

- "L" is shown on the A4 paper guide for the left side. "R" is shown on the A4 paper guide for the right side.

#### Note:

- When you use letter or legal paper, you do not need to install the A4 paper guides.
- Change the recording paper size to "A4" (feature #16).

### 3.3.6. DOCUMENTS THE UNIT CAN SEND

#### 3.3.6.1. USING THE ADF (AUTO DOCUMENT FEEDER)

**Note:**

- Remove chips, staples or other similar fasteners.
- Do not send the following types of documents. (Use copies for fax transmission.)
  - Chemically treated paper such as carbon or carbonless duplicating paper
  - Electrostatically charged paper
  - Badly curled, creased or torn paper
  - Paper with a coated surface
  - Paper with a faint image
  - Paper with printing on the opposite side that can be seen through the other side (i.e. newspaper)

**Note for the auto document feeder and the scanner glass**

- Check that ink, paste or correction fluid has dried completely.
- To transmit the document with a width of less than A4 size (210 mm), we recommend using a copy machine to copy the original document onto letter-sized paper, then transmitting the copied document.

### 3.3.7. TO SELECT CHARACTERS WITH THE DIAL KEYPAD

Pressing the dial keys will select a character as shown below.

Keys	Characters
①	1 [ ] { } + - / = , . _ ` : ; ?
②	A B C a b c 2
③	D E F d e f 3
④	G H I g h i 4
⑤	J K L j k l 5
⑥	M N O m n o 6
⑦	P Q R S p q r s 7
⑧	T U V t u v 8
⑨	W X Y Z w x y z 9
⑩	0 ( ) < > ! " # \$ % & ¥ * @ ^ ' →
☐	To change capital or lower case letter.
FLASH	<b>Hyphen</b> button (To insert a hyphen.)
HANDSET MUTE	<b>Insert</b> button (To insert one character or one space.)
STOP	<b>Delete</b> button (To delete a character.)
▶	▶ key (To move the cursor to the right.) To enter another character using the same number key, move the cursor to the next space.
◀	◀ key (To move the cursor to the left.)

### 3.3.8. TO SELECT CHARACTERS USING THE (+) OR (-) KEY

To select characters using **+** or **-**

Instead of pressing the dial keys, you can select characters using **+** or **-**.

1. Press **+** or **-** repeatedly to display the desired character.
2. Press **▶** to move the cursor to the next space.
  - The character displayed in step 1 is inserted.
3. Return to step 1 to enter the next character.

#### Display order of characters

### 3.3.9. SETTING YOUR LOGO

The logo can be your company, division or name.

**1** Press **[MENU]**.  
 Display: SYSTEM SET UP  
 PRESS NAVI. [◀ ▶]

**2** Press **[◀]** or **[▶]** repeatedly to display the following.  
 YOUR LOGO  
 PRESS SET

**3** Press **[SET]**  
 • Cursor ( \_ ) will disappear on the display.  
 LOGO= \_

**4** Enter your logo, up to 30 characters, using the dial keypad. See the character table.  
**Example:** "Bill"

1. Press **[2]** 2 times.  
 Cursor  
 LOGO=B /

2. Press **[4]** 3 times.  
 LOGO=Bi

3. Press **[5]** 3 times.  
 LOGO=Bi\_

4. Press **[▶]** to move the cursor to the next space and press **[5]** 3 times.  
 LOGO=Bill\_

**5** Press **[SET]**  
 • The next feature will be displayed.  
 YOUR FAX NO.  
 PRESS SET

**6** Press **[MENU]** to exit the program.

**Note:**

- You can enter your logo by pressing **[+]** or **[-]** (see the previous page) in step 4. In this case, press **[▶]** to move the cursor.

**To change capital or lower case letters**

Pressing the **[H]** key will change to capital or lower case alternatively.

1. Press **[2]** 2 times.  
 Display: LOGO=B

2. Press **[4]** 3 times.  
 LOGO=Bi

3. Press **[H]**.  
 LOGO=Bi\_

4. Press **[5]** 3 times.  
 LOGO=Bill\_

**To correct a mistake**

- Press **[◀]** or **[▶]** to move the cursor to the incorrect character, and make the correction.

**To delete a character**

- Press **[◀]** or **[▶]** to move the cursor to the character you want to delete and press **[STOP]** (Delete).

**To insert a character**

1. Press **[◀]** or **[▶]** to move the cursor to the position to the right of where you want to insert the character.
2. Press **[HANDSET MUTE]** (Insert) to insert a space and enter the character.

### 3.3.10. REPLACING THE TONER CARTRIDGE AND THE DRUM UNIT

When the display shows the following, replace the toner cartridge.

Display: TONER LOW or TONER EMPTY

We recommend you replace the drum unit every fourth time you replace the toner cartridge. To check the drum life and quality, please print the printer test list.

To ensure that the unit operates properly, we recommend the use of **Panasonic toner cartridge (Model No. KX-FA83E/KX-FA83A) and drum unit (Model No. KX-FA84E/KX-FA84A).**

**Caution:**

- We cannot be responsible for any damage to the unit or degradation of print quality which may occur from the use of non-Panasonic toner cartridge and drum unit.
- The drum unit contains a photosensitive drum. Exposing it to light may damage the drum. Once you have opened the protection bag:
  - Do not expose the drum unit to light for more than 5 minutes.
  - Do not touch or scratch the green drum surface.
  - Do not place the drum unit near dust or dirt, or in a high humidity area.
  - Do not expose the drum unit to direct sunlight.
- Do not unplug the fax machine to prevent loss of fax documents in memory.
- Do not leave the toner cartridge out of the protection bag for a long time. It will decrease the toner life.
- Do not pour any toner into the toner cartridge.

1. Before opening the protection bag of the new toner cartridge, shake it vertically more than 5 times.

2. Remove the new toner cartridge from the protection bag. Peel off the seal (1) from the toner cartridge.

3. Lift open the front cover (①), holding OPEN (②).

**Caution:**  
The fuser unit (③) gets hot.  
Do not touch it.

4. Tap on the used toner cartridge several times to allow the remaining toner to fall into the drum unit. Remove the drum and toner unit (①) by holding the two tabs.

- Do not touch the transfer roller (②).
- If you replace the toner cartridge and the drum unit at the same time, skip to step 7.

5. Turn the two levers (①) on the used toner cartridge firmly, until the triangles (②) match.

6. Remove the used cartridge (①) from the drum unit (②).
- The toner may stick to the cartridge and the drum unit. Be careful when handling.
  - Do not drop the toner on the green drum surface (③).
  - Put the used toner cartridge into the protection bag.

7. If you replace the drum unit at the same time, remove the new drum unit from the protection bag. Place the toner cartridge (①) into the drum unit (②) vertically.

8. Firmly press down the toner cartridge to snap into position.

9. Turn the two levers (①) on the toner cartridge firmly.

10. Make sure that the triangles (①) match, to install the toner cartridge correctly.

- If the lower glass (②) is dirty, clean it with a soft dry cloth.

11. Install the drum and toner unit (①) by holding the tabs.

12. Close the front cover (①) by pushing down on both sides, until locked.
- While the unit displays "PLEASE WAIT", do not open the front cover, or disconnect the power cord.

## 4 MAINTENANCE

### 4.1. MAINTENANCE ITEMS AND COMPONENT LOCATIONS

#### 4.1.1. OUTLINE

MAINTENANCE AND REPAIRS ARE PERFORMED USING THE FOLLOWING STEPS.

##### 1. Periodic maintenance

Inspect the equipment periodically and if necessary, clean any contaminated parts.

##### 2. Check for breakdowns

Look for problems and consider how they arose.

If the equipment can be still used, perform copying, self testing or communication testing.

##### 3. Check equipment

Perform copying, self testing and communication testing to determine if the problem originates from the transmitter, receiver or the telephone line.

##### 4. Determine causes

Determine the causes of the equipment problem by troubleshooting.

##### 5. Equipment repairs

Repair or replace the defective parts and take appropriate measures at this stage to ensure that the problem will not recur.

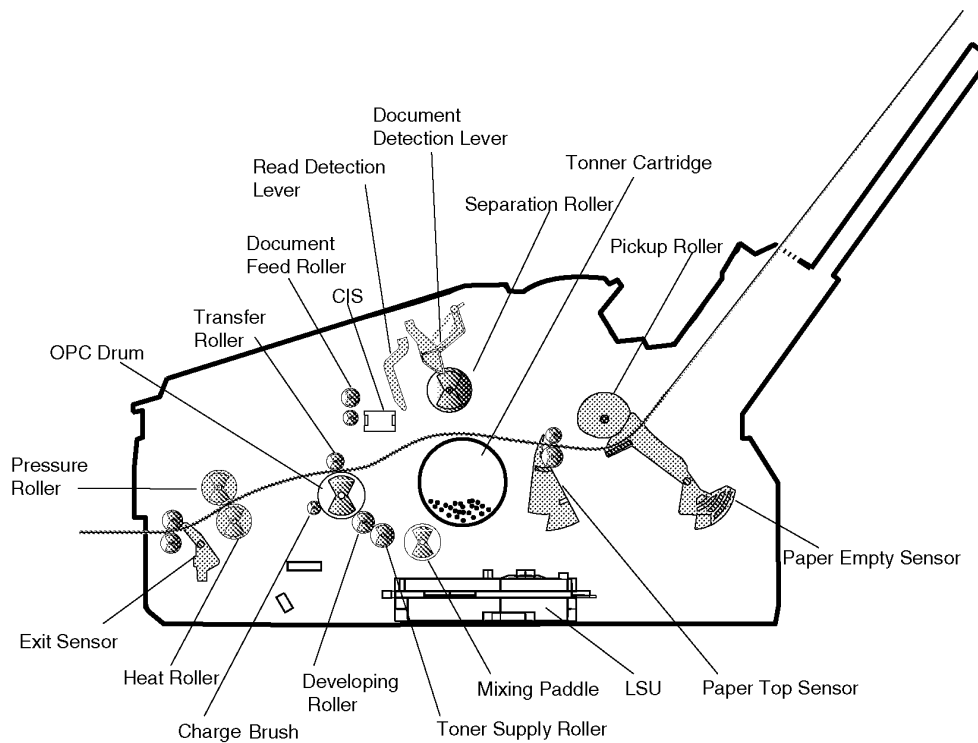

##### 6. Confirm normal operation of the equipment

After completing the repairs, conduct copying, self testing and communication testing to confirm that the equipment operates normally.

##### 7. Record keeping

Make a record of the measures taken to rectify the problem for future reference.

#### 4.1.2. MAINTENANCE CHECK ITEMS/COMPONENT LOCATIONS

### 4.1.2.1. Maintenance List

NO.	OPERATION	CHECK	REMARKS
1	Document Path	Remove any foreign matter such as paper.	—
2	Rollers	If the roller is dirty, clean it with a damp cloth then dry thoroughly.	Refer to <b>MAINTENANCE CHECK ITEMS/COMPONENT LOCATIONS</b> (P.27).()
3	Sensors	Document sensor (PS500), Paper feed sensor (PS501), Printer cover open switch (SW101),ADF cover open sensor (SW501), FB cover open sensor (SW500), ADF CIS position sensor (PS502),FB CIS position sensor (PS503)Resist sensor (PC201),Paper exit sensor (PS50). Paper sensor (PS1)Confirm the operation of the sensors.	See <b>MAINTENANCE CHECK ITEMS/COMPONENT LOCATIONS</b> (P.27) and <b>SENSORS AND SWITCHES SECTION</b> (P.175) <b>TEST FUNCTIONS</b> (P.64)
4	Glass	If the glass is dirty, clean them with a dry soft cloth.	Refer to <b>MAINTENANCE</b> (P.32).
5	Abnormal, wear and tear or loose parts	Replace the part. Check if the screws are tight on all parts.	—

### 4.1.2.2. Maintenance Cycle

No.	Item	Cleaning Cycle	Replacement	
			Cycle	Procedure
1	ADF Separation Roller (Ref.No.50)	3 months	7 years* (100,000 documents)	Refer to <b>HOW TO REMOVE THE SEPARATION ROLLER</b> (P.49).
2	Paper Feed Roller (Ref.No.154)	3 months	7 years (100,000 documents)	Refer to <b>HOW TO REMOVE THE SEPARATION RUBBER</b> (P.47).
3	ADF Separation Rubber (Ref. No.35)	3 months	7 years (100,000 documents)	Refer to <b>HOW TO REMOVE THE SEPARATION RUBBER</b> (P.47).
4	ADF Exit Roller (Ref.No.34)	3 months	7 years (100,000 documents)	Refer to <b>HOW TO REMOVE THE SEPARATION RUBBER</b> (P.47).
5	Pick up Roller (Ref No.108)	3 months	7 years (100,000 documents)	Refer to <b>HOW TO REMOVE THE PICK UP UNIT</b> (P.45).
6	Separation Rubber (Ref. No.99)	3 months	7 years (100,000 documents)	Refer to <b>HOW TO REMOVE THE PICK UP ROLLER</b> (P.44).
7	Document Feed Roller (Ref.No.154)	3 months	7 years (100,000 documents)	Refer to <b>HOW TO REMOVE THE SEPARATION RUBBER</b> (P.47)
8	Transfer Roller (Ref.No.73)	3 months	7 years (100,000 documents)	Refer to <b>HOW TO REMOVE THE TRANSFER ROLLER</b> (P.48).
9	Pressure Roller (Ref.No.120)	3 months	7 years (100,000 documents)	Refer to <b>FUSER SECTION</b> (P.225).
10	Heat Roller (Ref.No.127)	3 months	7 years (100,000 documents)	Refer to <b>FUSER SECTION</b> (P.225).
11	Exit Roller (Ref.No.142)	3 months	7 years (100,000 documents)	Refer to <b>FUSER SECTION</b> (P.225).

If each part has got dirty, clean it with a damp cloth then dry thoroughly.

\* These values are standard and may vary depending on usage conditions.

## 4.2. PRINTING

- The motor pinion rotates in the direction shown in the figure.
- The gears of fixing and developing parts are driven by the GEAR IDLER 67.
- The GEAR PAPER FEED ROLLER drives the roller.
- The GEAR CLUTCH runs idle and GEAR PICKUP PAPER is still.

### 4.3. PRINTING (PAPER PICK UP)

#### During printing

- When the SOLENOID is turned ON, the LEVER PICK UP CLUTCH is hooked on the RING of GEAR CLUTCH. It causes the GEAR PICKUP PAPER to rotate.
- The recording paper is pressed by the PICKUP ROLLER and the top paper is separated and fed.
- Even the SOLENOID is turned OFF, it can not stop on the way of a turn because the tip of LEVER PICK UP CLUTCH is on the CAM of GEAR PICKUP PAPER.
- When the tip of LEVER PICK UP CLUTCH returns to CAM's home position, the GEAR CLUTCH RING is unhooked, then the GEAR PICKUP PAPER is stopped.

#### 4.4. SCANNING (ADF)

- DOCUMENT TRANSMISSION (ADF)

When the tip of the document is set to a point of contact between the separation roller and the separation pad through the document feed roller, then the document is fed there separately. The document feed roller carries the document and the CIS reads it through the glass. The document is exited through the document feed roller.

## 4.5. MAINTENANCE

If a black line, a white line or a dirty pattern appears on your recording paper, on your original, or on the fax document received by the other party, clean the white plate, scanner glass and lower glass.

### 4.5.1. CLEANING THE INSIDE OF THE UNIT

If any of the following problems occurs, clean the inside of the unit:

- Document frequently misfeed.
- Black line, a white line or a dirty pattern appear on the original document when sending or copying.

**Caution:**

- Be careful when handling the drum and toner unit.
- Do not use paper products, such as paper towels or tissues, to clean inside of the unit.

1. Disconnect the power cord and the telephone line cord.
2. Lift open the front cover (①), holding OPEN (②).

**Caution:**  
The fuser unit (③) gets hot.  
Do not touch it.

3. Clean the document separation roller (①) with a cloth moistened with isopropyl rubbing alcohol, and let all parts dry thoroughly.

4. Hold the center part of the front cover (①), and pull open the inner cover (②).
  - Do not touch the transfer roller (③).

5. Clean the document feeder roller (①) with a cloth moistened with isopropyl rubbing alcohol, and let all parts dry thoroughly. Clean the upper glass (②) with a soft and dry cloth.

6. Push back the inner cover.  
7. Remove the drum and toner unit (①) by holding the two tabs.

8. Clean the lower glass (①) with a soft and dry cloth.

9. Reinstall the drum and toner unit (①) by holding the tabs.

10. Close the front cover (1) by pushing down on both sides, until locked.

11. Reconnect the power cord and the telephone line cord.

**Note:**

- Do not touch the transfer roller (1).

## 4.6. DOCUMENT JAMS

If the unit does not release the document during feeding, remove the jammed document as follows.

1. Lift open the front cover (①), holding OPEN (②).

**Caution:**  
The fuser unit (③) gets hot.  
Do not touch it.

2. Hold the center part of the front cover (①), and pull open the inner cover (②).
  - Do not touch the transfer roller (③).

3. Remove the jammed document carefully (①).

4. Push back the inner cover.
5. Close the front cover (①) by pushing down on both sides, until locked.

**Note:**

- Do not pull out the jammed document forcibly before opening the front cover.

## 4.7. RECORDING PAPER JAMS

### 4.7.1. When the recording paper has jammed in the unit

If the unit does not eject any recording paper during reception or copying, the recording paper has jammed and the display will show the following message.

The display will show the following.

Display: PAPER JAMMED

1. Lift open the front cover (①), holding OPEN (②).

**Caution:**  
The fuser unit (③) gets hot.  
Do not touch it.

2. Remove the jammed paper.  
**When the recording paper has jammed near the drum and toner unit:**

Remove the jammed paper (①) carefully by pulling it toward you.

- Do not touch the transfer roller (②).

**When the recording paper has jammed near the recording paper exit:**

2-1. Pull the tension plate forward (①), then remove the paper tray cover (②).

2-2. Remove the recording paper (①), then remove the drum and toner unit (②) to allow the jammed paper (③) to pull free from the rear cabinet.

2-3. Lift both green levers (①) forward until they stop.

2-4. Remove the jammed paper (①) from the fuser unit by pulling it upwards carefully, then install the drum and toner unit.

2-5. Push back the levers (1) to the original position.

3. Close the front cover (1) by pushing down on both sides, until locked.

4. Re-insert the recording paper (1).  
• Before re-inserting, make sure to fan and straighten the recording paper.

5. Attach the paper tray cover (1), then push back the tension plate (2).

#### 4.7.2. When the recording paper is not fed into the unit properly

The display will show the following.

Display:

FAILED PICK UP

1. Pull the tension plate forward (①), then remove the paper tray cover (②). Remove the recording paper (③).

2. Re-insert the recording paper. Attach the paper tray cover, then push back the tension plate.
  - Before re-inserting, make sure to fan and straighten the recording paper.

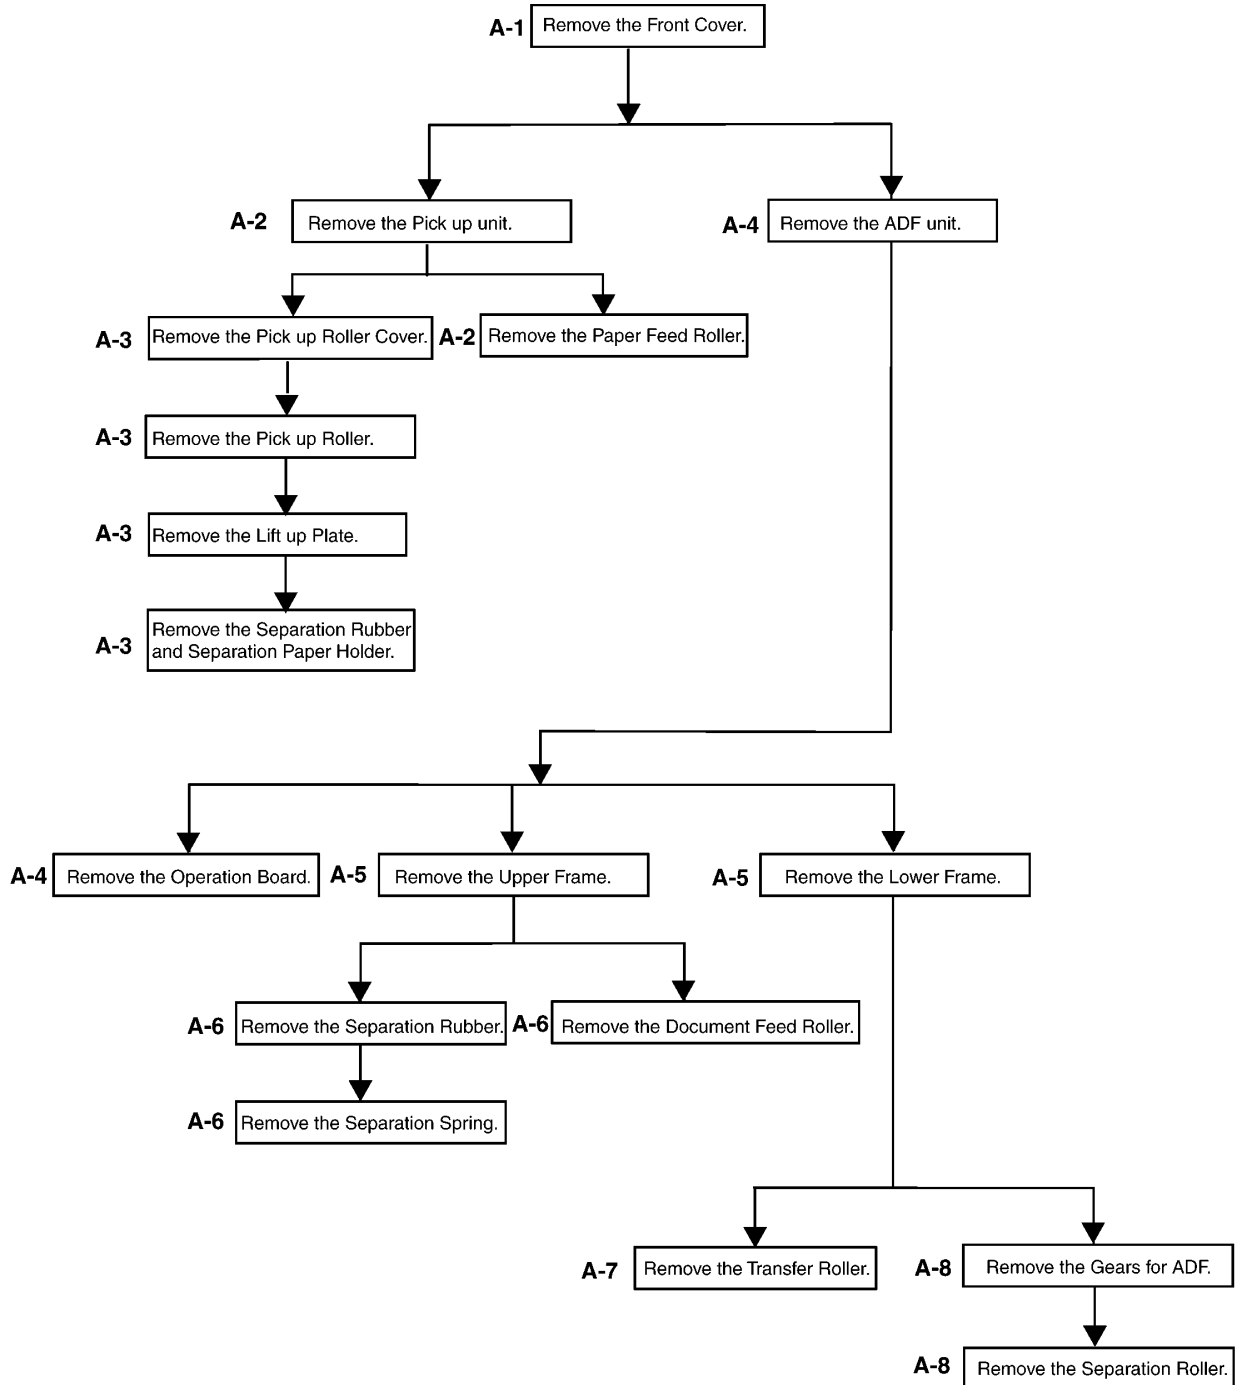

## 5 DISASSEMBLY INSTRUCTIONS

Before disassembling, remove the Drum and Toner unit by holding the two tabs.

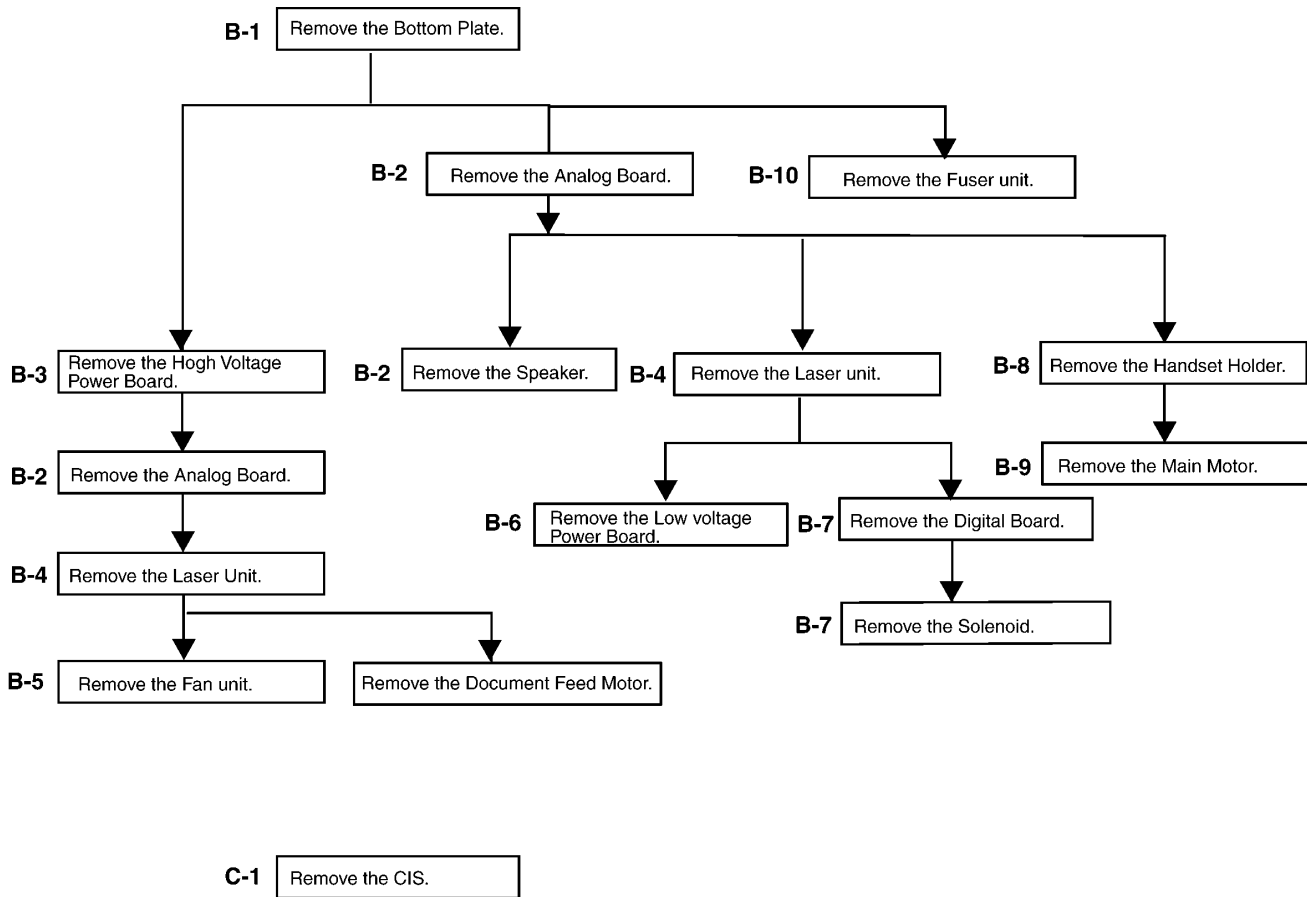

## 5.1. UPPER MAIN CABINET SECTION

### CROSS REFERENCE:

- A1: HOW TO REMOVE THE OPERATION PANEL ASS'Y (P.43)
- A2: HOW TO REMOVE THE PICK UP UNIT (P.44)
- A3: HOW TO REMOVE THE PICK UP ROLLER (P.45)

- B8: HOW TO REMOVE THE HANDSET HOLDER (P.53)
- B9: HOW TO REMOVE THE MAIN MOTOR (P.54)
- B10: HOW TO REMOVE THE FUSER UNIT (P.55)
- C1: HOW TO REMOVE THE CIS (P.56)

### 5.3. HOW TO REMOVE THE OPERATION PANEL ASS'Y

PROCEDURE: A-1

REF.NO.A-1

- (1) Open the Front Cover.
  - (2) Insert the small screwdriver as illustrated in Fig-1
  - (3) Close the Front Cover with the screwdriver remaining like Fig-2 and raise it with the screwdriver.
  - (4) Lift up the Front Cover.(Fig-3)
- \*When disassembling the Front Cover ,  
turn the unit on its side, as shown in Fig-4.

## 5.4. HOW TO REMOVE THE PICK UP UNIT

PROCEDURE: A-1--> A-2

REF.NO.A-2

- 1) Pull the tension plate in the direction of the arrow.
- 2) Remove the 4 screws (A).
- 3) Lift up the Pick up ass'y.
- 4) Remove the 2 spacers.
- 5) Remove the Paper Feed Roller.

## 5.5. HOW TO REMOVE THE PICK UP ROLLER

PROCEDURE: A-1-->A-2-->A-3

REF.NO.A-3

- 1) Remove the 2 screws (A).
- 2) Remove the Pick up Roller Cover.
- 3) Rotate the spacer as illustrated in Fig-1.  
and the release the Pick up roller.
- 4) Remove the Pick up roller.
- 5) Remove the Document Guide.
- 6) Remove the Separation Rubber, Separation Holder, stopper and spring.

## 5.6. HOW TO REMOVE THE OPERATION BOARD

PROCEDURE: A-1--> A-4

REF.NO.A-4

- 1) Pull out the Document Stacker ahead.
- 2) Remove the 5 screws (A)
- 3) Separate the ADF (Auto Document Feeder) unit from the Operation Panel unit.
- 4) Remove the connector (A).
- 5) Release the 2 hooks (a).
- 6) Release the 2 hooks (b) to remove the LCD.
- 7) Remove the Operation Board.

## 5.7. HOW TO REMOVE THE LOWER FRAME

PROCEDURE: A1--> A-4--> A-5

REF.NO.A-5

- 1) Push the two tabs toward the outside of the unit and lift the Lower Frame.

## 5.8. HOW TO REMOVE THE SEPARATION RUBBER

PROCEDURE: A-1--> A-4--> A-5--> A-6

REF.NO.A-6

- 1) Remove the screw (A).
- 2) Remove the Separation Rubber and Separation Spring.
- 3) Remove the 2 spacers as illustrated Fig-1.
- 4) Remove the gear.
- 5) Remove the Document Feed Roller.

## 5.9. HOW TO REMOVE THE TRANSFER ROLLER

PROCEDURE: A-1--> A-4--> A-5--> A-7

REF.NO.A-7

- 1) Remove the 2 spacers as illustrated Fig-1.  
(If the leg of both the sides of the spacer is pinched using tweezers, it can remove easily.)
- 2) Remove the Transfer Roller.

## 5.10. HOW TO REMOVE THE SEPARATION ROLLER

PROCEDURE: A-1--> A-4--> A-5--> A-8

REF.NO.A-8

- 1) Remove the screw (B) and (C).
- 2) Remove the gear (B) and (C).
- 3) Pinch and remove the pin of the gear in the direction of the arrows shown in Fig-1 using a thing like tweezers.
- 4) Rotate the spacer as illustrated Fig-2.
- 5) Remove the Separation Roller.

## 5.11. HOW TO REMOVE THE BOTTOM PLATE

**PROCEDURE: B-1**

**REF.NO.B-1**

- 1) Remove the 5 screws (A).
- 2) Remove the screws (B).
- 3) Remove the screw (C).
- 4) Remove the Bottom Plate.

## 5.12. HOW TO REMOVE THE ANALOG BOARD

**PROCEDURE: B-1--> B-2**

**REF.NO.B-2**

- 1) Remove the 2 screws (A).
- 2) Remove the connector (A) and (B).
- 3) Remove the Analog Board.
- 4) Remove the screw (A').
- 5) Remove the spring.
- 6) Remove the speaker.

## 5.13. HOW TO REMOVE THE HIGH VOLTAGE POWER BOARD

PROCEDURE: B-1--> B-3

REF.NO.B-3

- 1) Remove the 6 screws (A).
- 2) Remove the connector (A).
- 3) Remove the H.V.P.S. (High Voltage Power Board).

## 5.14. HOW TO REMOVE THE LASER UNIT

PROCEDURE: B-1--> B-2--> B-4

REF.NO.B-4

- 1) Remove the 3 screws (A).
- 2) Remove the connector (A) and (B).
- 3) Remove the Laser unit.

## 5.15. HOW TO REMOVE THE FAN UNIT

PROCEDURE: B-1--> B-3--> B-2--> B-4--> B-5

REF.NO.B-5

- 1) Remove the 2 screws (A).
- 2) Remove the connector (A).
- 3) Remove the Fan unit.
- 4) Remove the screw (A').
- 5) Remove the connector (B).
- 6) Remove the Document Feed Motor.

## 5.16. HOW TO REMOVE THE LOW VOLTAGE POWER BOARD

PROCEDURE: B-1--> B-2--> B-4--> B-6

REF.NO.B-6

- 1) Remove the screw (B) and connector (A).
- 2) Remove the AC Inlet.
- 3) Remove the connector (B) and (C).
- 4) Remove the 4 screws (A).
- 5) Remove the Power Board (Low Voltage Power Board).

## 5.17. HOW TO REMOVE THE SOLENOID

PROCEDURE: B-1--> B-2--> B-4--> B-7

REF.NO.B-7

- 1) Remove the 4 screws (A).
- 2) Remove the 10 connectors.
- 3) Remove the Digital Board.
- 4) Remove the 2 screws (A').
- 5) Remove the Solenoid unit.

## 5.18. HOW TO REMOVE THE HANDSET HOLDER

PROCEDURE: A-1--> B-1--> B-8

REF.NO.B-8

- 1) Remove the screws (A).
- 2) Reverse the Main Cabinet.
- 3) Remove the 2 screws (A').
- 4) Remove Handset Holder.

## 5.19. HOW TO REMOVE THE MAIN MOTOR

PROCEDURE: B-1--> B-2--> B-8--> B-9

REF.NO.B-9

- 1) Remove the 3 screw (A) and connector (A).
- 2) Remove the Main Motor Ass'y.
- 3) Remove the screw (B).
- 4) Remove the gear (A) and (B).

## 5.20. HOW TO REMOVE THE FUSER UNIT

PROCEDURE: B-1--> B-10

REF.NO.B-10

First of all,reverse the Main Unit. and remove the bottom Plate.(see the REF.NO.B-1)

- 1) Remove the connector (A) ,(B) and (C).(Fig-1)
- 2) Revert the Main Unit.
- 3) Remove the 2 screws (A).
- 4) Lift up the Fuser unit from the Main Cabinet.

## 5.21. HOW TO REMOVE THE CIS

### PROCEDURE: C-1

#### REF.NO.C-1

- 1) Lift open the Front Cover.
- 2) Pull the tab(gray) back to free it from the pin (white) .  
on both the left and right sides of the unit (Fig-a).
- 3) Push the CIS in the direction of an arrow to release the hooks.(Fig-b).
- 4) Remove the CIS.

## 5.22. NOTE FOR ASSEMBLING

### 5.22.1. FCC (DIGITAL BOARD)

Install the FFC as following pictures,when you connect the FFC to the digital board.

### 5.22.2. DOCUMENT STACKER

- (1) Mark of a Lower Frame and Document Stacker is united and assemble.
- (2) Slide the Document Stacker to the back.

### 5.22.3. THERMOSTAT

Attach the thermostat correctly, as shown in the right figure.  
Do not use the thermostat which changed.

### 5.23. INSTALLATION POSITION OF THE LEAD

25 (4cm)  
Attach the tape equally  
to right and left.

Attach FAN MOTOR LEAD, LEAD/HVPS  
and MOTOR LEAD.

**SECTIONAL VIEW**

Leads is processed in accordance  
with the side of cabinet.

< Caution point >  
If the leads is processed in accordance  
with the edge side of the rib, the leads  
are crushed by LSU.

## 6 TROUBLESHOOTING GUIDE

### 6.1. USER RECOVERABLE ERRORS

If the unit detects a problem, one or more of the following messages will appear on the display.

The explanations given in the [ ] are for servicemen only.

DISPLAY MESSAGE	CAUSE AND REMEDY
CALL SERVICE 1	<ul style="list-style-type: none"> <li>• Polygon motor error. Refer to <b>CALL SERVICE 1</b> (P.84).</li> </ul>
CALL SERVICE 2	<ul style="list-style-type: none"> <li>• Laser beam error. Replace LSU unit. Refer to <b>CALL SERVICE 2</b> (P.85).</li> </ul>
CALL SERVICE 3	<ul style="list-style-type: none"> <li>• Fuser unit cannot heat up. Replace fuser unit. Refer to <b>CALL SERVICE 3</b> (P.86).</li> </ul>
CALL SERVICE 4	<ul style="list-style-type: none"> <li>• Fan motor error. Replace fan motor. Refer to <b>CALL SERVICE 4</b> (P.87).</li> </ul>
CHANGE DRUM ↑ CHANGE SUPPLIES	<ul style="list-style-type: none"> <li>• There is something wrong with the drum unit. Replace the drum unit and the toner cartridge.</li> </ul>
CHECK DOCUMENT	<ul style="list-style-type: none"> <li>• The document is not fed into the unit properly. Reinsert the document. If misfeeding occurs frequently, clean the document feeder rollers and try again.</li> </ul>
CHECK DRUM	<ul style="list-style-type: none"> <li>• The drum unit is not inserted properly. Reinsert it correctly.</li> <li>• The installed drum is worn out. Replace the drum unit with a new one.</li> </ul>
CHECK MEMORY	<ul style="list-style-type: none"> <li>• The memory (telephone numbers, parameters, etc.) has been erased. Re-program.</li> </ul>
COVER OPEN	<ul style="list-style-type: none"> <li>• The front cover is open. Close it.</li> </ul>
DIRECTORY FULL	<ul style="list-style-type: none"> <li>• There is no space to store new entries in navigator directory. Erase unnecessary entries.</li> </ul>
DRUM LIFE OVER REPLACE DRUM ↑ CHANGE SUPPLIES	<ul style="list-style-type: none"> <li>• The drum life is complete. Replace the drum unit immediately.</li> </ul>
FAILED PICK UP	<ul style="list-style-type: none"> <li>• Recording paper was not fed into the unit properly. Reinsert the recording paper.</li> </ul>
FAX IN MEMORY	<ul style="list-style-type: none"> <li>• The unit has a document in memory. See the other displayed message instructions to print out the document.</li> </ul>
FAX MEMORY FULL	<ul style="list-style-type: none"> <li>• The memory is full of received documents due to lack of recording paper or a recording paper jam, etc. Install paper or clear the jammed paper.</li> <li>• When performing memory transmission, the document being stored exceeds the memory capacity of the unit. Transmit the entire document manually.</li> </ul>
LOW TEMP.	<ul style="list-style-type: none"> <li>• The inside of the unit is extremely cold and cannot be operated. Use the unit in a warmer area. While the unit cannot be operated, the received documents are temporarily stored into the memory, and will be printed out automatically when the unit warms up.</li> </ul>
MEMORY FULL	<ul style="list-style-type: none"> <li>• When making a copy, the document being stored exceeds the memory capacity of the unit. Press <b>STOP</b> to clear the message. Divide the document into sections.</li> </ul>
MODEM ERROR	<ul style="list-style-type: none"> <li>• There is something wrong with the modem circuit.</li> </ul>
NO FAX REPLY	<ul style="list-style-type: none"> <li>• The other party's fax machine is busy or has run out of recording paper. Try again.</li> </ul>
OUT OF PAPER	<ul style="list-style-type: none"> <li>• Recording paper is not installed or the unit has run out of paper. Install paper.</li> <li>• Recording paper is not fed into the unit properly. Reinstall paper.</li> </ul>
PAPER JAMMED	<ul style="list-style-type: none"> <li>• A recording paper jam occurred. Clear the jammed paper. [If the printout jams, please refer to <b>RECORDING PAPER JAMS</b> (P.36).]</li> </ul>
PLEASE WAIT	<ul style="list-style-type: none"> <li>• The unit is warming up. Wait for a while.</li> </ul>
POLLING ERROR	<ul style="list-style-type: none"> <li>• The other party's fax machine does not offer the polling function. Check with the other party.</li> </ul>
REDIAL TIME OUT	<ul style="list-style-type: none"> <li>• The other party's fax machine is busy or has run out of recording paper. Try again.</li> </ul>

DISPLAY MESSAGE	CAUSE AND REMEDY

<div style="border: 1px solid black; padding: 2px; text-align: center;">WRONG PAPER</div>	<ul style="list-style-type: none"> <li>• The fax message was printed on paper which is shorter than letter size paper. Use the appropriate size paper.</li> </ul>

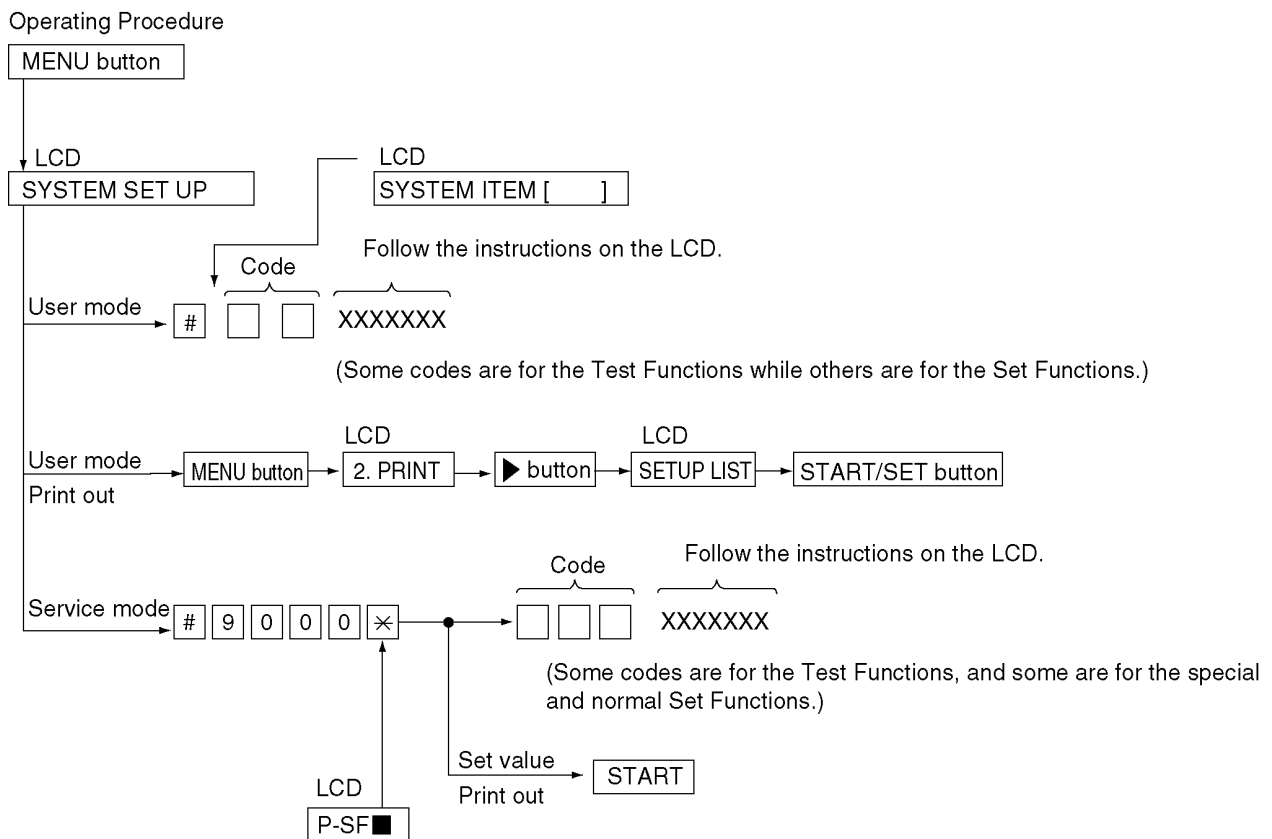

## 6.2. PROGRAMMING AND LISTS

The programming functions are used to program the various features and functions of the machine, and to test the machine. This facilitates communication between the user and the service man while programming the unit.

### 6.2.1. OPERATION

There are 2 basic categories of programming functions, the User Mode and the Service Mode. The Service Mode is further broken down into the normal and special programs. The normal programs are those listed in the Operating Instructions and are available to the user. The special programs are only those listed here and not displayed to the user. In both the User and Service Modes, there are Set Functions and Test Functions. The Set Functions are used to program various features and functions, and the Test Functions are used to test the various functions. The Set Functions are accessed by entering their code, changing the appropriate value, then pressing the SET key. The Test Functions are accessed by entering their code and pressing the key listed on the menu. While programming, to cancel any entry, press the STOP key.

### 6.2.2. OPERATION FLOW

### 6.2.3. SERVICE FUNCTION TABLE

Code	Function	Set Value	Effective Range	Default	Remarks
501	Pause time set	X 100 msec	001~600	030	-----
502	Flash time	X 10 ms	01~99	70	-----
514	Bell signal detect time	X 100msec	1~9	3	-----
520	CED frequency select	1:2100 Hz 2:1100 Hz	1, 2	1	See Symptom/Countermeasure Table for long distance and international calls in (P.118).
521	International mode select	1:ON 2:OFF	1, 2	1	See Symptom/Countermeasure Table for long distance and international calls in (P.118).
522	Auto standby select	1:ON 2:OFF	1, 2	1	The resolution reverts to the default when transmission is complete.
523	Receive equalizer select	1: 0 km 2: 1.8 km 3: 3.6 km 4: 7.2 km	1~4	1	Set RX equalizer to automatic mode.
524	Transmission equalizer select	1: 0 km 2: 1.8 km 3: 3.6 km 4: 7.2 km	1~4	1	
529	Call Service Clear				
544	Document feed position adjustment value set	X mm	0~4	2	If it is difficult to feed documents, raise the set value. If multi documents feed occurs, lower the set value.
550	Memory clear.				See (P.64).
551	ROM check				See (P.64).
552	DTMF single tone test	1:ON 2:OFF	1, 2	2	See (P.64).
553	Monitor on FAX communication select	1:OFF 2:PHASE B 3:ALL	1~3	1	Sets whether to monitor the line signal with the unit's speaker during FAX communication or not.
554	Modem test				See (P.64).
555	Scan check				See (P.64).
556	Motor test			0	See (P.64).
557	LED test				See (P.64).
558	LCD test				See (P.64).
561	KEY test				See (P.64).
571	ITS auto redial time set	X number of times	00~99	05	Selects the number of times that ITS is redialed (not including the first dial).
572	ITS auto redial line disconnection time set	X second	001~999	065	Sets the interval of ITS redialing.
573	Remote turn-on ring number set	X number of rings	01~99	10	Sets the number of rings before the unit starts to receive a document in the TEL mode.
590	FAX auto redial time set	X number of times	00~99	05	Selects the number of redial times during FAX communication (not including the first dial).
591	FAX auto redial time disconnection time set	X second	001~999	065	Sets the FAX redial interval during FAX communication.
592	CNG transmit select	1:OFF 2:ALL 3:AUTO	1~3	2	Lets you select the CNG output during FAX transmission. ALL: CNG is output at phase A. AUTO: CNG id output only when automatic dialing is performed. OFF: CNG id not output at phase A. Refer to (P.111).
593	Time between CED and 300bps	1:75 msec 2:500 msec 3:1 sec	1~3	1	See <b>Symptom/Countermeasure Table</b> for long distance and international calls in (P.118). Refer to (P.112) and (P.118).
594	Overseas DIS detection select	1:detects at the 1st time 2:detects at the 2st time	1, 2	1	See <b>Symptom/Countermeasure Table</b> for long distance and international calls in (P.118). Refer to (P.111) and (P.118).
595	Receive error limit value set	1: 5% 2: 10% 3: 15% 4: 20%	1~4	2	If the number of errors during transmission exceeds this value, the sending side terminates the call.
596	Transmit level set	X dBm	- 15~00	11	Selects the FAX transmission level. Refer to (P.111)and (P.112).
598	Receiving sensitivity	43= -43 dBm	20~48	41	Used when there is an error problem. Refer to (P.118).
599	ECM frame size	1:256 2:64	1, 2	1	-----
628	H.V.P.S. check				See (P.64).

Code	Function	Set Value	Effective Range	Default	Remarks
630	Paper Jam Cause Distinction Code				0:No Paper Jam 1:The paper was pulled into the unit. 2:The paper was longer than the maximum length of the register sensor. 3:The paper exit was not detected after the registration. 4:The paper was longer than the maximum length of the paper exit sensor. 5:The register sensor or paper exit sensor was turned ON before the motor started to rotate. 6:The register sensor chattered. 7:The paper exit sensor chattered.
639	LSU test				See (P.64).
651	Write system program into the Flash Rom with a tool.				See the parts number of the tool. (P.241). The tool includes the operating manual for writing program.
655	Cause Distinction Code of Call Service 3				See (P.83).
710	Memory clear except History data				To reset the value to the default one, except History data. Please restart a power supply after clearing a memory.
717	Transmit speed selection	1:14400BPS 2:12000BPS 3:9600BPS 4:7200BPS 5:4800BPS 6:2400BPS	1~6	1	Adjusts the speed to start training during FAX transmission. Refer to (P.111) and
718	Receive speed selection	1:14400BPS 2:12000BPS 3:9600BPS 4:7200BPS 5:4800BPS 6:2400BPS	1~6	1	Adjusts the speed to start training during FAX reception. Refer to (P.112) and
721	Pause tone detect	1:ON 2:OFF	1, 2	2	Selects the tone detection for pause in dialing.
722	Redial tone detect	1:ON 2:OFF	1, 2	1	Sets the tone detection mode after redialing.
763	CNG detect time for friendly reception	1:10 sec 2:20 sec 3:30 sec	1~3	3	Selects the CNG detection tone of friendly reception.
771	T1 timer	1:35 sec 2:60 sec	1, 2	1	Sets a higher value when the response from the other party needs more time during FAX transmission.
774	T4 timer	X 100 sec	00~99	00	Use this function when delay occurs in the line and communication. (ex. Mobile comm) does not work well.
815	Sensor & Vox check				See (P.64).
852	Print test pattern				See (P.64).
853	Top margin		1~5	3	-----
854	Left margin		1~7	4	-----
874	DTMF ON time	X msec	060~200	90	-----
875	DTMF OFF time	X msec	060~200	90	-----
880	History list				See (P.73).
881	Journal 2 list				See (P.116).
882	Journal 3 list				See (P.116).

### 6.3. TEST FUNCTIONS

The codes listed below can be used to perform simple checks of some of the unit's functions. When complaints are received from customers, they provide an effective tool for identifying the locations and causes of malfunctions.

Test Mode	Type of Mode	Code	Function
		Operation after code input	
MOTOR TEST	Service Mode	"5" "5" "6"	0: Recording paper feed 1: Auto Document feed (STANDARD) 2: Auto Document feed (FINE) 3: Auto Document feed (SUPER FINE)
		START	
MODEM TEST	Service Mode	"5" "5" "4"	Telephone line circuit is connected automatically, output the following signals on the circuit line. 1) OFF 2) 14400bps 3) 12000bps 4) 9600bps 5) 7200 bps 6) 4800bps 7) 2400bps 8) 300bps 9) 2100Hz 10) 1100Hz
		START	
ROM CHECK	Service Mode	"5" "5" "1"	Indicates the version and checks the sum of the ROM.
		START	
LCD CHECK	Service Mode	"5" "5" "8"	Checks the LCD indication. Illuminates all the dots to check if they are normal. Refer to <b>OPERATION PANEL SECTION</b> (P.131).
		START	
DTMF SINGLE TEST	Service Mode	"5" "5" "2"	Outputs the DTMF as single tones. Used to check the frequencies of the individual DTMF tones. Refer to <b>DTMF SINGLE TONE TRANSMIT SELECTION</b> (P.66).
		1...ON 2...OFF	
LED CHECK	Service Mode	"5" "5" "7"	All LEDs above the operation panel board flash on and off, or are illuminated.
		START	
KEY CHECK	Service Mode	"5" "6" "1"	Checks the button operation. Indicates the button code on the LCD while the button is pressed. Refer to <b>BUTTON CODE TABLE</b> (P.66), <b>OPERATION PANEL SECTION</b> (P.131).
		START (any key)	
CIS TEST	Service Mode	"5" "5" "5"	LED lights up, CIS scanning. Refer to <b>CIS (Contact Image Sensor) SECTION</b> (P.138).
LSU TEST	Service Mode	"6" "3" "9"	Laser radiates, Polygon rotates Refer to <b>LSU SECTION</b> (P.137).
MEMORY CLEAR	Service Mode	"5" "5" "0"	To reset the value to the default one, except the top margin (#853), left margin (#854), time / day (#001), logo (#002), Fax no. (#003), History and Directory data. Please restart a power supply after clearing a memory.
		START	
High Voltage Power Supply Board CHECK	Service Mode	"6" "2" "8"	Refer to <b>HIGH VOLTAGE VALUE CHECK POINT</b> (P.139).
		START	
FAN TEST	Service Mode	"6" "7" "7"	1:TEST OFF 2:High-speed rotation 3:Low-speed rotation
		START	

Test Mode	Type of Mode	Code	Function
		Operation after code input	
SENSOR CHECK	Service Mode	"8" "1" "5"	First of all, press the copy button, and confirm the action of ON/OFF. For each sensor's operation, refer to <b>SENSORS AND SWITCHES SECTION (P.175)</b> . <b>D S C P R E D T * 3 F * D 4 * V</b> : LCD DISPLAY <b>D: Document sensor</b> D: Document set -: No document <b>S: Paper Feed Sensor</b> S: Read position -: No read position <b>C: Printer Cover Switch</b> C: Open -: Close <b>P: Paper sensor</b> P: Recording paper set -: No recording paper <b>R: Regist Sensor</b> R: Detect recording paper -: Not defect recording paper <b>E: Exit Sensor</b> E: Detect recording paper -: Not detect recording paper <b>D: Drum Sensor</b> D: DRUM set -: No DRUM <b>T: Toner Sensor</b> T: Toner sensor ON -: Toner sensor OFF <b>*: None</b> <b>3F: Temperature of THERMISTOR</b> Hex (00-FF) <b>*: None</b> <b>D4: Temperature of Atmosphere</b> Hex (00-FF) <b>*: None</b> <b>V: VOX signal</b> V: Detect the tone on the line -: Not detect
		START	1. Press "852" then the SET key in the service mode. 2. As "PATNO =" is displayed on the LCD, enter the test pattern No. and press the SET key. 3. When "No. =" is displayed on the LCD, enter the printing number and press the SET key. (Press "00" for the infinite printing.) 4. "MODE" is displayed on the LCD. Press "0" to start printing or press "1" to go to the next screen. 5. When "1" is pressed at MODE, "INTVL =" is displayed on the LCD. Enter the printing interval (00-99 sec). 6. The printing repeats the designated number of times at the programmed printing intervals.
PRINT TEST PATTERN	Service Mode	"8" "5" "2"	

**Note:**

The numbers in the boxes (XXX) indicate the keys to be input for the various test modes.

### 6.3.1. DTMF SINGLE TONE TRANSMIT SELECTION

When set to ON (=1), the 12 keys and transmission frequencies are as shown.

key	Low Frequency (Hz)	Key	High Frequency (Hz)
"1"	697	"5"	1209
"2"	770	"6"	1336
"3"	852	"7"	1477
"4"	941	"8"	1633

When set to OFF (=2), the 12 keys and transmission frequencies are as shown.

Low (Hz) \ High (Hz)	1209	1336	1477
	697	"1"	"2"
770	"4"	"5"	"6"
852	"7"	"8"	"9"
941	"*" (X)	"0"	"#" (H)

**Note:**

After performing this check, do not forget to turn the setting off. otherwise, dialing in DTMF signal will not work.

### 6.3.2. BUTTON CODE TABLE

Code	Button Name	Code	Button Name	Code	Button Name
00	NO INPUT	31	1	49	QUICK SCAN
-	STOP	32	2	4C	CALLER ID PRINT
02	RESOLUTION	33	3	4D	COLLATE
04	FAX START	34	4	5B	BROADCAST 1
05	LOWER	35	5	5C	BROADCAST 2
06	COPY START	36	6	5D	MANUAL BROAD
08	MONITOR	37	7	5E	STATION 4
0A	HANDSET MUTE	38	8	5F	STATION 5
0C	AUTO ANSWER	39	9	60	STATION 6
1E	NAVIGATOR NEXT	3A	0	61	STATION 7
1F	NAVIGATOR PREV	3B	* (X)	62	STATION 8
20	MENU	3C	#	63	STATION 9
22	HELP	3D	REDIAL/PAUSE	64	STATION 10
24	DIRECTORY PROGRAM	3E	FLASH	65	STATION 11
25	VOLUME +	47	CALLER ID SEARCH		
26	VOLUME -	48	JUNK FAX PROHIBITOR		

### 6.3.3. PRINT TEST PATTERN

1. NO. 01

2. NO.08

3. NO.12

- These print test patterns are just image printing, and different from actual ones.

When it is required to judge the print quality, compare with the printing of a nondefective machine.

## 6.4. REMOTE PROGRAMMING

If, after the call is connected, the customer describes the situation and it is determined that the problem can be corrected by making parameter changes, this function makes it possible to change parameters such as the user code and service code from another fax (using DTMF tones). Therefore, travel to the customer's location is not required. However, it is not possible to change all the parameters remotely (**PROGRAM MODE TABLE**(P.69)). The function used to accomplish this is remote programming.

First, in order to check the current status of the service code parameter, print out the setup list (code: 991) and the service list (code: 999) from the customer's fax machine.

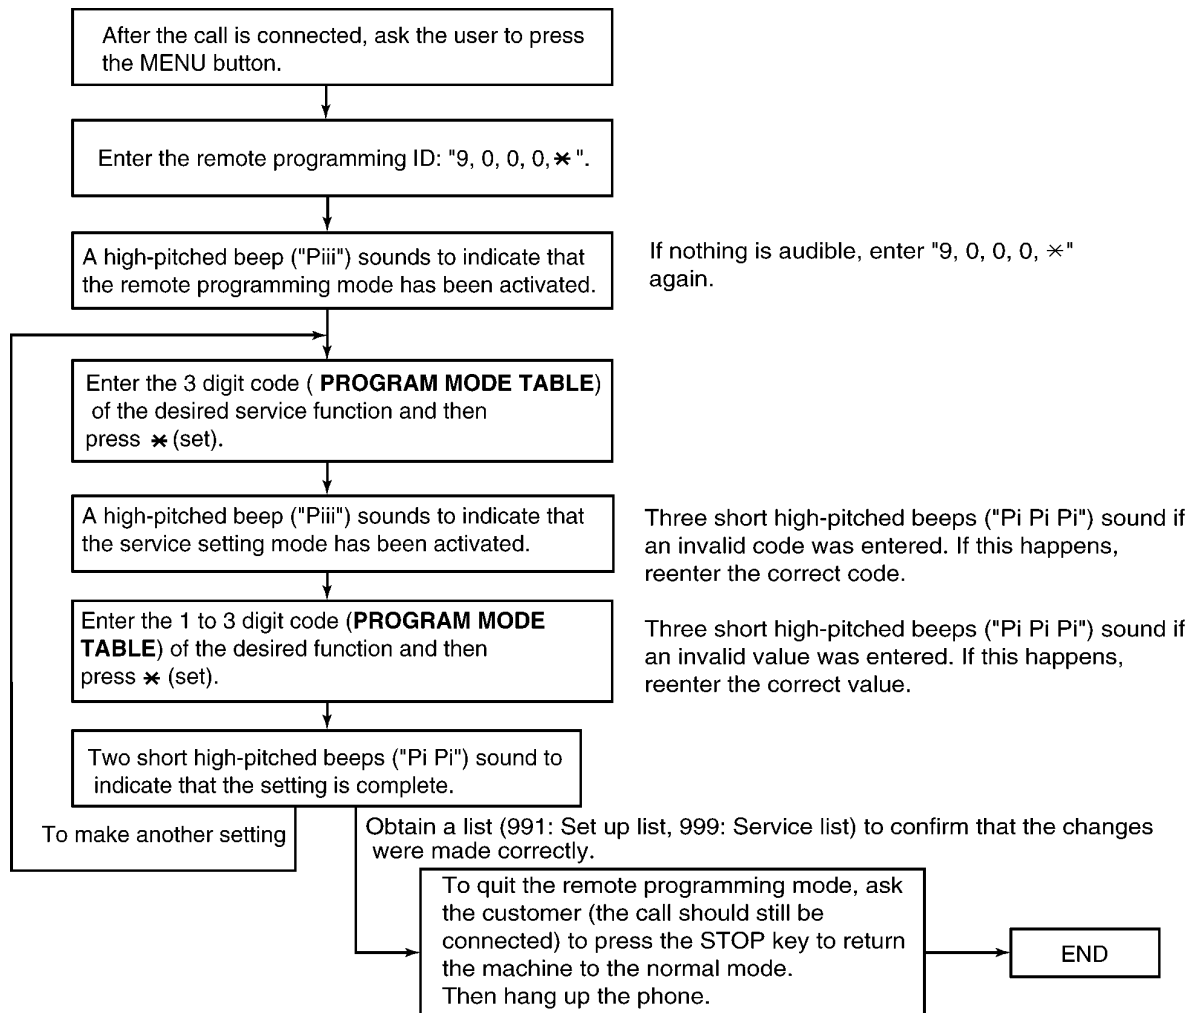

Based on this, the parameters for the desired codes can be changed.

The procedure for changing and listing parameters is described on **ENTERING THE REMOTE PROGRAMMING MODE AND CHANGING SERVICE CODES**(P.68). Also, before exiting the remote programming mode, it is advisable to obtain a new list to confirm that the changes were made correctly.

**Hint:**

Since the connected telephone is in use during the remote programming mode, it may be helpful to ask the customer to switch to the speakerphone. This frees the customer from the need to remain right next to the fax while you are making parameter settings. When finished, inform the customer. Also note that in very noisy locations where the DTMF tones are not audible, the remote programming function will not work.

### 6.4.1. ENTERING THE REMOTE PROGRAMMING MODE AND CHANGING SERVICE CODES

**CROSS REFERENCE:**

**PROGRAM MODE TABLE** (P.69)

## 6.4.2. PROGRAM MODE TABLE

Code	Function	Set Value	Default	Remote Setting
001	Set date and time	mm/dd/yy hh:mm	Jan/01/2005	NG
002	Your logo	-----	None	NG
003	Your fax telephone number	-----	None	NG

996	Journal 3 list	1:Start	-----	OK
998	History list	1:Start	-----	OK
999	Service list	1:Start	-----	OK

OK means "can set".

NG means "can not set".

**Note:**

Refer to **SERVICE FUNCTION TABLE** (P.62) for descriptions of the individual codes.

**Example:**

If you want to set value in the "004 Transmission report mode", press the dial key number 1, 2 or 3 corresponding to the Set Value you want to select. (1:ERROR/2:ON/3:OFF)

**6.4.3. USER MODE (The list below is an example of the SYSTEM SETUP LIST the unit prints out.)**

**SETUP LIST**

**[ BASIC FEATURE LIST ]**

NO.	FEATURE	CURRENT SETTING
	#01 SET DATE & TIME	Jan. 01 2005 12:00AM
	#02 YOUR LOGO	
	#03 YOUR FAX NUMBER	
Code	#04 PRINT SENDING REPORT	ERROR [ERROR, ON, OFF]
	#06 FAX RING COUNT	2 [1...9]
	#12 REMOTE TAM ACTIVATION	OFF [ON, OFF]
	#13 DIALLING MODE	ID = 11 TONE [TONE, PULSE]
	#16 PAPER SIZE	A4 [LETTER, A4, LEGAL]
	#17 RINGER PATTERN	A [A, B, C]

Set Value

**[ ADVANCED FEATURE LIST ]**

NO.	FEATURE	CURRENT SETTING
Code	#22 JOURNAL AUTO PRINT	ON [ON, OFF]
	#23 OVERSEAS MODE	ERROR [NEXT FAX, ERROR, OFF]

**Note:**

See the following descriptions of this report. Item No. (1) ~ (54) are corresponding to the listed items in **DESCRIPTIONS OF THE HISTORY REPORT**(P.74).

### 6.4.5.1. DESCRIPTIONS OF THE HISTORY REPORT

(1) ROM VERSION

FLASH ROM version

(2) SUM

FLASH ROM internal data calculation.

(3) YOUR LOGO

The user logo recorded in the unit. If it is not recorded, NONE will be displayed.

(4) YOUR TELEPHONE NUMBER

The user telephone number recorded in the unit. If it is not recorded, NONE will be displayed.

(5) Not used

(6) FACTORY - CUSTOMER

This shows how many days from factory production until the user turns ON the unit.

(7) MONTH

The shows the very first month, date, year and time set by the user after they purchased the unit.

(8) DAY

The shows the very first month, date, year and time set by the user after they purchased the unit.

(9) YEAR

The shows the very first month, date, year and time set by the user after they purchased the unit.

(10) TIME

The shows the very first month, date, year and time set by the user after they purchased the unit.

(11) USAGE TIME

The amount of time the unit has been powered ON.

(12) FACTORY - NOW

This shows how many days from factory production until the user prints out this history list.

(13) TEL MODE

The amount of time the TEL mode setting was used.

(14) FAX MODE

The amount of time the FAX mode setting was used.

(15) Not used

(16) Not used

(17) FINAL RECEIVE MODE

The last set receiving mode by the user.

(18) TONE/PULSE SELECTION

The most recently used setting used, either TONE or PULSE.

(19) RECEIVE REDUCTION

The compression rate when receiving.

(20) SETTING NO. OF DIRECTORY

The recorded directory stations (one touch dial).

(21) NUMBER OF COPY

The number of pages copied.

(22) NUMBER OF RECEIVE

The number of pages received.

(23) NUMBER OF SENDING

The number of pages sent.

(24) NUMBER OF CALLER ID

The number of times Caller ID was received.

(25) Not used

(26) Not used

(27) Not used

(28) Not used

(29) Not used

(30) Not used

(31) NUMBER OF PRINTING HELP

The number of help lists printed until now.

(32) NUMBER OF DIVIDED PRINTING IN FAX RECEPTION

The number of faxes received that were divided into more than one sheet since the unit was purchased.

(33) Not used.

(34), (35) Not used.

(36) FAX MODE

Means the unit received a fax message in the FAX mode.

(37) MAN RCV

Means the unit received a fax message by manual operation.

(38) FRN RCV

Means the unit received a fax message by friendly signal detect.

(39) Not used

(40) RMT DTMF

Means the unit detected DTMF (Remote Fax activation code) entered remotely.

(41) PAL DTMF

Means the unit detected DTMF (Remote Fax activation code) entered by a parallel connected telephone.

(42) TURN-ON

Means the unit started to receive after 10 rings. (Remote Turn On: Service Code #573)

(43) Not used

(44) IDENT

Means the unit detected Ring Detection.

(45) Not used

(46) Not used

(47) Not used

(48) Not Used

(49) Not Used

(50) Printing number of the drum unit

(51) Paddle rotation number of the drum unit

(52) CALL SERVICE 3 failure cause record (the latest)

(53) CALL SERVICE 3 failure cause record (the last time)

(54) CALL SERVICE 3 failure cause record (the second last time)

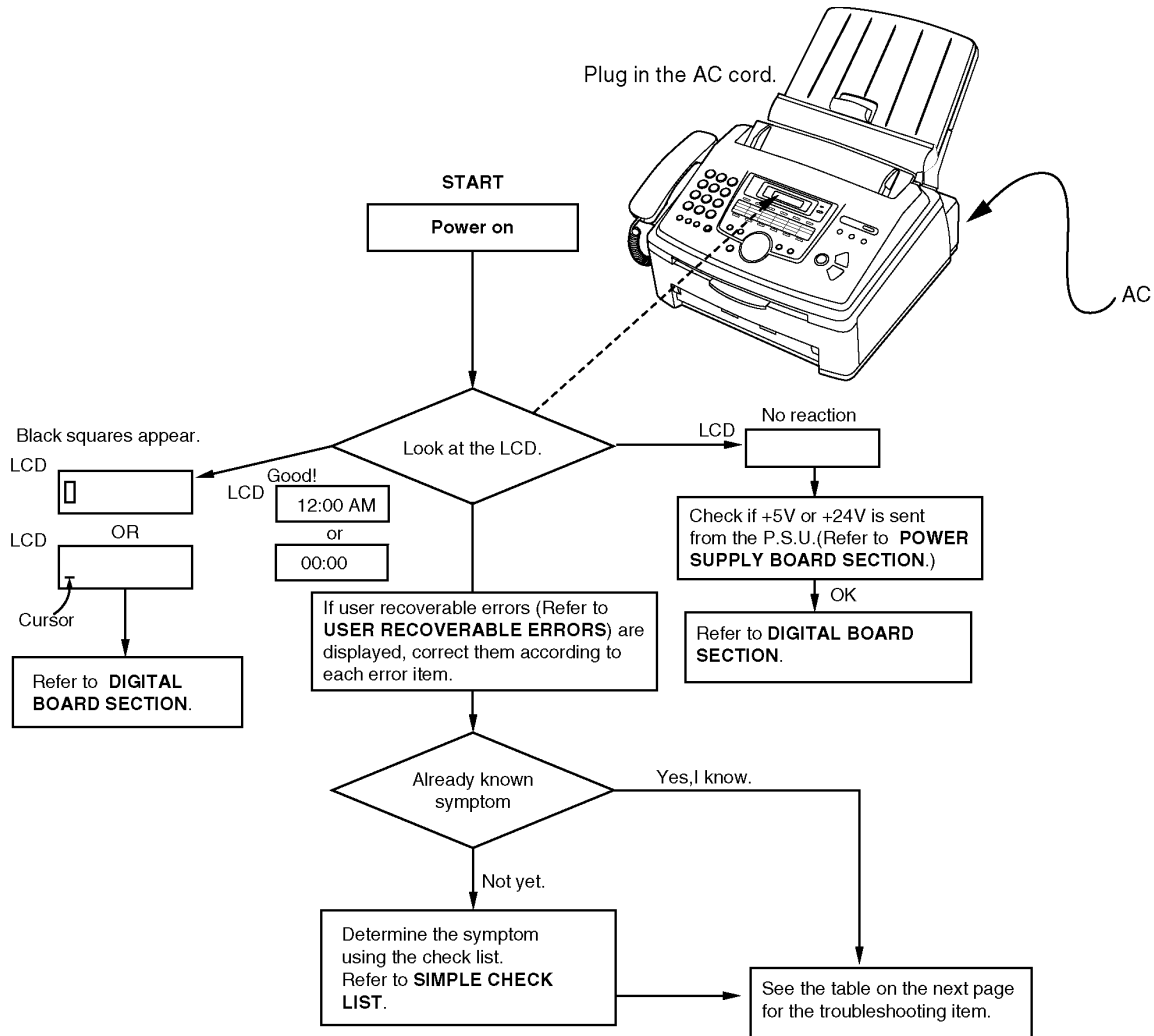

## 6.5. TROUBLESHOOTING DETAILS

### 6.5.1. OUT LINE

Troubleshooting is for recovering quality and reliability by determining the broken component and replacing, adjusting or cleaning it as required. First, determine the problem then decide the troubleshooting method. If you have difficulty finding the broken part, determine which board is broken. (For example: the Digital PCB, Analog PCB, etc.) The claim tag from a customer or dealer may use different expressions for the same problem, as they are not a technician or engineer. Using your experience, test the problem area corresponding to the claim. Also, returns from a customer or dealer often have a claim tag. For these cases as well, you need to determine the problem. Test the unit using the simple check list on **SIMPLE CHECK LIST**(P.78). Difficult problems may be hard to determine, so repeated testing is necessary.

### 6.5.2. STARTING TROUBLE SHOOTING

Determine the symptom and the troubleshooting method.

#### CROSS REFERENCE:

**USER RECOVERABLE ERRORS**(P.59)

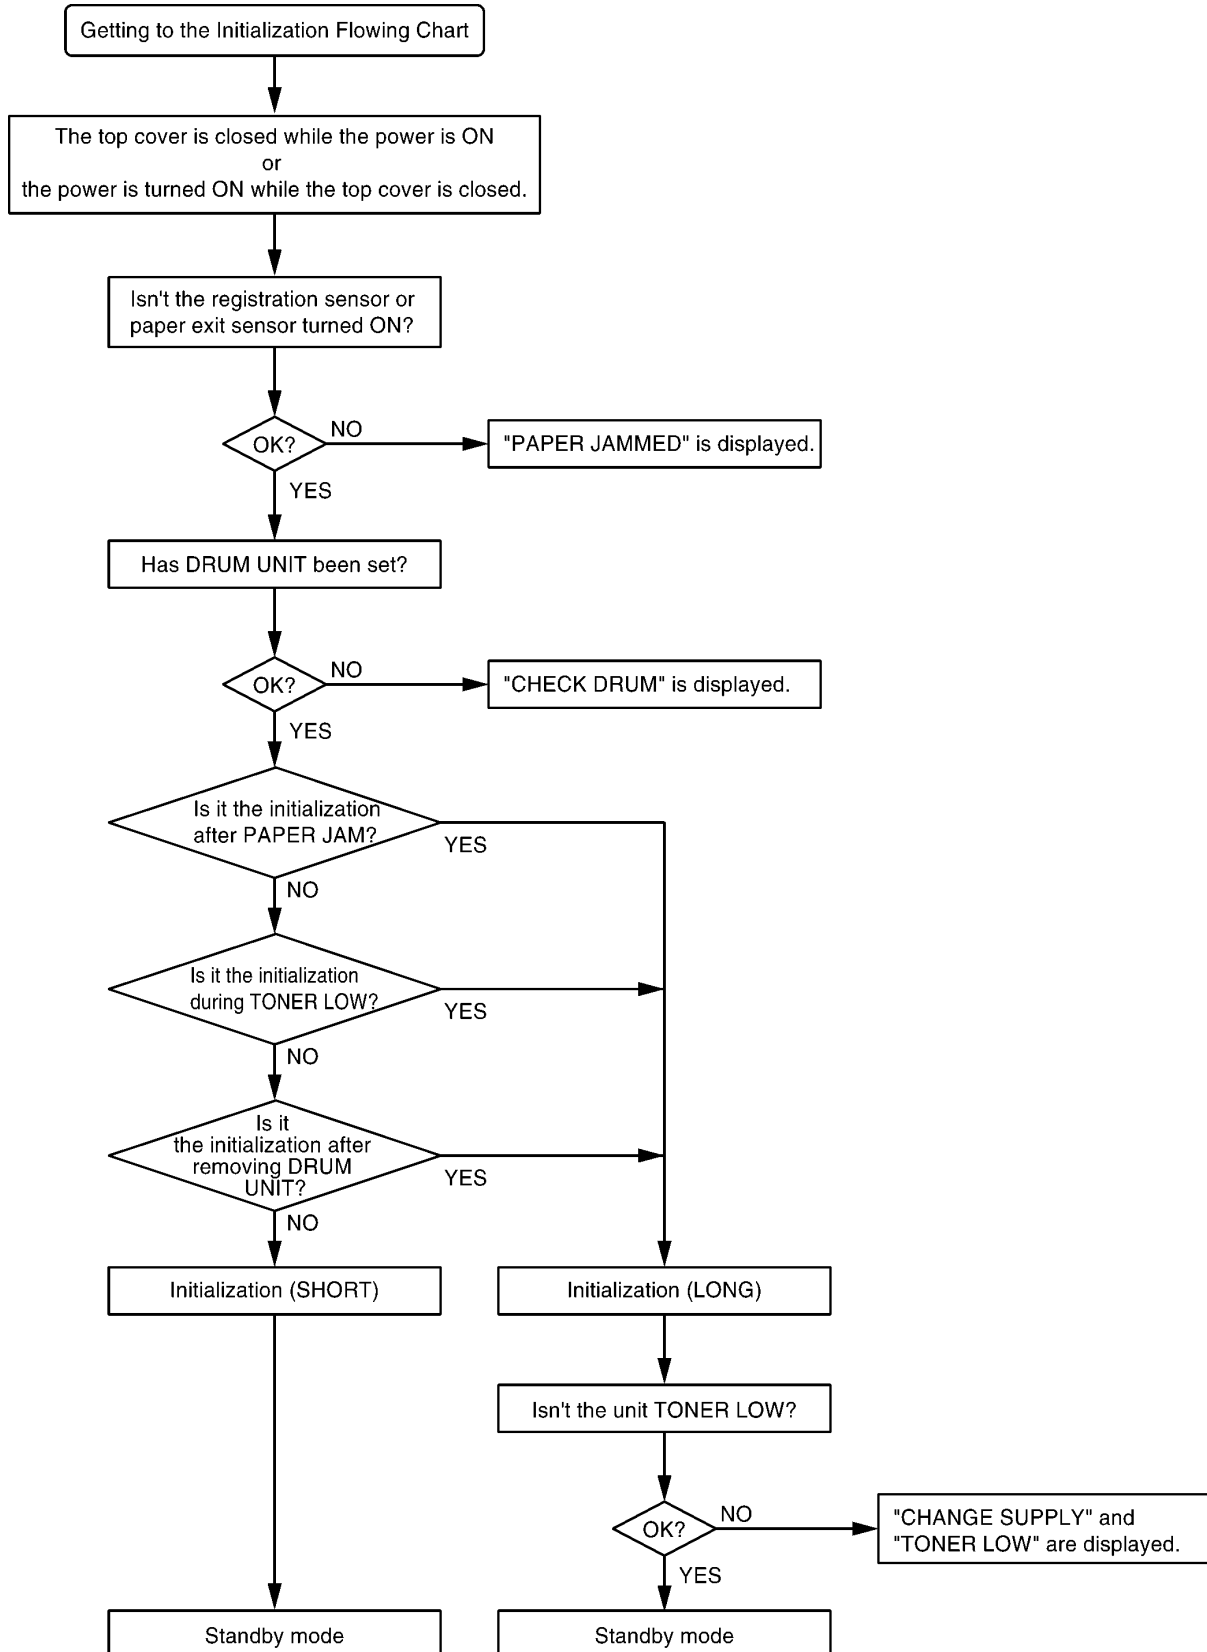

**SIMPLE CHECK LIST**(P.78)

**DIGITAL BOARD SECTION**(P.208)

**POWER SUPPLY BOARD SECTION**(P.144)

### 6.5.3. INITIALIZATION

There are two types of initialization, one is the short initialization (about 3 seconds) and the other is the long initialization (about 10 seconds). The short initialization makes the unit enter the standby mode. The long initialization makes the unit enter the standby mode after cleaning or detecting the rest of toner.

## 6.5.4. SIMPLE CHECK LIST

SERIAL NO.		DATE	
FUNCTION		JUDGEMENT	REFERENCE
FAX operation	Transmission	OK / NG	
	Receiving	OK / NG	
Copy operation	Copy by ADF	OK / NG	
Telephone operation	Handset transceiver/ receiver	OK / NG	
	MONITOR sound	OK / NG	
	Ringer sound	OK / NG	
	Dial operation	OK / NG	
	Volume operation	OK / NG	
Operation panel	Key check	OK / NG	Service code 561※
	LED check	OK / NG	Service code 557※
	LCD check	OK / NG	Service code 558※
Sensor	Sensor check	OK / NG	Service code 815※
Clock		OK / NG	Is the time kept correctly? Check with another clock.
EXT-TAM	Handset transceiver/receiver	OK / NG	
	Remote control	OK / NG	

**Note:**

Check according to the service code referring to **TEST FUNCTIONS** (P.64)

## 6.5.5. SIMPLIFIED TROUBLESHOOTING GUIDE

### 6.5.5.1. PRINTING

No.	Symptom	Cause	Countermeasure
1	<b>GHOST IMAGE</b> (P.88)	Failed drum unit	Replace drum unit
		Failed transfer unit	Check the transfer roller and spring
		Failed the high-voltage terminal	Check the high-voltage terminal
		Failed the high voltage power supply board	Go to <b>HIGH VOLTAGE SECTION</b> (P.140)
		Failed fuser unit	Check the heat roller and the pressurized roller and the spring and the heat lamp and the thermistor
		Failed the power supply board	Go to <b>POWER SUPPLY BOARD SECTION</b> (P.144)
		Too thick or too thin recording paper	Use the recording paper from 16lb to 24lb
2	<b>DARK OR WHITE VERTICAL LINE</b> (P.89)	Dirty the lower glass or the reflecting mirror	Clean the lower glass and the reflecting mirror
		Dust on the path of the laser beam	Clean the path of the laser beam
		Dust on the developing roller	Replace drum unit
		Failed the heat roller or the pressurized roller	Check the heat roller and the pressurized roller
		Failed LSU	Go to <b>LSU SECTION</b> (P.137)
3	<b>DARK OR WHITE HORIZONTAL LINE</b> (P.90)	Failed drum unit	Replace drum unit
		Failed the gear	Check the gear
		Failed the engine motor	Go to <b>ENGINE MOTOR</b> (P.135)
		Failed the high-voltage terminal	Check the high-voltage terminal
		Failed the high voltage power supply board	Go to <b>HIGH VOLTAGE SECTION</b> (P.140)
		Scratch on the OPC drum	Replace drum unit
		Static electricity on the documents (when copying)	Check the connection between the parts around CIS and earth
4	<b>DIRTY OR HALF DARKNESS BACKGROUND</b> (P.91)	Failed drum unit	Replace drum unit
		Life of drum unit is over	Replace drum unit
		Dirty the pickup roller and the regist roller and the feed roller and the eject roller and the heat roller and the pressure roller	Clean the pickup roller and the regist roller and the feed roller and the eject roller and the heat roller and the pressure roller
		Failed the high-voltage terminal	Check the high-voltage terminal
		Failed the high voltage power supply board	Go to <b>HIGH VOLTAGE SECTION</b> (P.140)
		Dirty the recording paper path	Clean the recording paper path
5	<b>BLACK PRINT</b> (P.92)	Failed drum unit	Replace drum unit
		Failed LSU	Go to <b>LSU SECTION</b> (P.137)
		Failed the high-voltage terminal	Check the high-voltage terminal
		Failed the high voltage power supply board	Go to <b>HIGH VOLTAGE SECTION</b> (P.140)
		Failed the digital board	Check the digital board
		Failed CIS (when copying)	Go to <b>CIS (Contact Image Sensor) SECTION</b> (P.138)
6	<b>LIGHT PRINT</b> (P.93)	Short toner	Supply toner
		Failed drum unit	Replace drum unit
		Life of drum unit is over	Replace drum unit
		Dirty the lower glass or the reflecting mirror	Clean the lower glass and the reflecting mirror
		Failed the high-voltage terminal	Check the high-voltage terminal
		Failed the high voltage power supply board	Go to <b>HIGH VOLTAGE SECTION</b> (P.140)
7	<b>BLACK DENSITY IS LIGHT OR UNEVEN</b> (P.94)	Short toner	Supply toner
		Failed drum unit	Replace drum unit
		Life of drum unit is over	Replace drum unit
		Dirty the lower glass or the reflecting mirror	Clean the lower glass and the reflecting mirror
		Failed the high-voltage terminal	Check the high-voltage terminal
		Failed the high voltage power supply board	Go to <b>HIGH VOLTAGE SECTION</b> (P.140)
8	<b>BLANK PRINT</b> (P.95)	Failed drum unit	Replace drum unit
		Failed LSU	Go to <b>LSU SECTION</b> (P.137)
		Failed the high-voltage terminal	Check the high-voltage terminal
		Failed the high voltage power supply board	Go to <b>HIGH VOLTAGE SECTION</b> (P.140)
		Failed the digital board	Check the digital board
		Failed CIS (when copying)	Go to <b>CIS (Contact Image Sensor) SECTION</b> (P.138)
9	<b>BLACK OR WHITE POINT</b> (P.95)	Failed the developer roller (31.4mm pitch)	Replace drum unit
		Failed the OPC drum (75.4mm pitch)	Replace drum unit
		Failed the heat roller (62.8mm pitch)	Check the heat roller
		Failed the charge blush (21mm pitch)	Replace drum unit
		Failed the high voltage power supply board	Go to <b>HIGH VOLTAGE SECTION</b> (P.140)
		Too thick or too thin recording paper	Use the recording paper from 16lb to 24lb

### 6.5.5.2. RECORDING PAPER FEED

No.	Symptom	Cause	Countermeasure
1	<b>MULTIPLE FEED</b> (P.96)	Dirty or failed the pickup roller	Clean or replace the pickup roller
		Dirty or failed the pickup rubber	Clean or replace the separation rubber
2	<b>THE RECORDING PAPER IS WAVED OR WRINKLED</b> (P.96)	Dirty the pressure roller or the heat roller	Clean the pressure roller and the heat roller
		Failed the spring of pressure roller	Replace the spring of pressure roller
		Too thin recording paper	Use the recording paper from 16lb to 24lb
3	<b>SKEW</b> (P.97)	Dirty or failed the pickup roller	Clean or replace the pickup roller
		Dirty or failed the pickup rubber	Clean or replace the separation rubber
		Dirty or failed the paper feed roller	Clean or replace the regist roller
		Dust on the recording paper path	Clean the recording paper path
		Failed LSU	Replace LSU
		Over the max capacity of the recording paper	Set up to MAX 150 sheets
4	<b>THE RECORDING PAPER DOES NOT FEED</b> (P.98)	Too thick or too thin recording paper	Use the recording paper from 16lb to 24lb
		Dirty or failed the pickup roller	Clean or replace the pickup roller
		Dirty or failed the pickup rubber	Clean or replace the separation rubber
		Failed the gear	Check the gear
		Failed the engine motor	Go to <b>ENGINE MOTOR</b> (P.135)
5	<b>THE RECORDING PAPER JAM(P.99)"PAPER JAMMED" ON THE LCD</b>	Failed the paper feed sensor lever	Check the regist sensor (paper top sensor) lever
		Failed the paper feed sensor	-----
		Dirty or failed the pressure roller	Clean or replace the pressure roller
		Dirty or failed the heat roller	Clean or replace the heat roller
		Dust on the recording paper path	Clean the recording paper path
		Failed the paper feed roller	Replace the regist roller
		Failed the gear	Check the gear
		Failed the engine motor	Go to <b>ENGINE MOTOR</b> (P.135)
		Failed the paper feed sensor lever	Check the regist sensor (paper top sensor) lever
		Failed the paper feed sensor	-----
		Failed the exit sensor lever	Check the exit sensor lever
		Failed the exit sensor	Go to <b>PAPER EXIT SENSOR..... "PAPER JAMMED"</b> (P.179)
		Too thick or too thin recording paper	Use the recording paper from 16lb to 24lb
Not set the toner bottle	Set toner bottle		
6	<b>BACK SIDE OF THE RECORDING PAPER IS DIRTY</b> (P.101)	Dirty the recording paper path	Clean the recording paper path
		Dirty the pressure roller	Clean the pressure roller
		Dirty the regist roller	Clean the regist roller
		Failed the high-voltage terminal	Check the high-voltage terminal
		Failed the high voltage power supply board	Go to <b>HIGH VOLTAGE SECTION</b> (P.140)

## 6.5.5.3. COPY AND FAX

No.	Symptom	Cause	Countermeasure
1	<b>NO DOCUMENT FEED</b> (NO DOCUMENT FEED,DOCUMENT JAM and MULTIPLE DOCUMENT FEED.) (P.102)	Failed the document sensor lever	Replace the document sensor lever
		Failed the document sensor	Go to <b>DOCUMENT SENSOR</b> (P.161)
		Dirty or failed the separation roller	Clean or replace the separation roller
		Dirty or failed the separation rubber	Clean or replace the separation rubber
		Failed the separation spring	Replace the separation spring
	<b>DOCUMENT JAM</b> (NO DOCUMENT FEED,DOCUMENT JAM and MULTIPLE DOCUMENT FEED.) (P.102)	Dust or scratch on the document paper path	Clean the document paper path
		Failed the gear	Check the gear
		Failed the ADF motor	Go to <b>ADF MOTOR</b> (P.136)
	<b>MULTIPLE DOCUMENT FEED</b> (NO DOCUMENT FEED,DOCUMENT JAM and MULTIPLE DOCUMENT FEED.) (P.102)	Failed the ADF cover open switch lever	Replace the ADF cover open switch lever
		Dirty or failed the separation roller	Clean or replace the separation roller
2	<b>SKEW (ADF)</b> (P.104)	Dirty or failed the separation rubber	Clean or replace the separation rubber
		Failed the separation spring	Replace the separation spring
		Dust or scratch on the document paper path	Clean the document paper path
3	<b>THE SENT FAX DATA IS SKEWED</b> (P.105)	Failed the document feed roller	Replace the document feed roller
		Failed the document guide	Replace the document guide
		The cause of ADF	Go to <b>SKEW (ADF)</b> (P.104)
4	<b>THE RECEIVED FAX DATA IS SKEWED</b> (P.105)	The cause of scanner glass	----
		Problem with the other FAX machine	
5	<b>THE RECEIVED OR COPIED DATA IS EXPANDED</b> (P.106)	The cause of printing	Go to <b>SKEW (ADF)</b> (P.104)
		Problem with the other FAX machine	
		Dirty or failed the drive roller (at ADF)	Clean or replace the drive roller
		Dirty or failed the document feed roller (at ADF)	Clean or replace the document feed roller
6	<b>BLACK OR WHITE VERTICAL LINE IS COPIED</b> (P.107)	Dirty or failed the separation roller (at ADF)	Clean or replace the separation roller
		Failed CIS movement (at SG)	Replace the belt or the gear or the shaft or the ADF motor
		Dirty or failed the white plate (2 places)	Clean or replace the white plate
		Dirty or failed the glass board	Clean or replace the glass board
		The cause of printing	Go to <b>DARK OR WHITE VERTICAL LINE</b> (P.89)
7	<b>AN ABNORMAL IMAGE IS COPIED</b> (P.108)	Failed CIS	Go to <b>CIS (Contact Image Sensor) SECTION</b> (P.138)
		Dirty or failed the white plate (2 places)	Clean or replace the white plate
		Dirty or failed the glass board	Clean or replace the glass board
		Dirty or failed the drive roller (at ADF)	Clean or replace the drive roller
		Dirty or failed the document feed roller (at ADF)	Clean or replace the document feed roller
		Dirty or failed the separation roller (at ADF)	Clean or replace the separation roller
		Failed CIS movement (at SG)	Replace the belt or the gear or the shaft or the ADF motor
		Failed CIS	Go to <b>CIS (Contact Image Sensor) SECTION</b> (P.138)
The cause of printing	Go to <b>DARK OR WHITE VERTICAL LINE</b> (P.89)		

#### 6.5.5.4. Others

No.	Symptom	Cause	Countermeasure
1	Cannot print legal size	Not selected the legal mode	Select the legal mode in the user programming mode
2	'CHECK DRUM' on the LCD	The drum unit can not be detected. <ul style="list-style-type: none"> <li>• Drum Sensor trouble</li> <li>• Mechanical shutter trouble</li> </ul>	Go to <b>DRUM SENSOR</b> (P.177) Go to <b>LSU (Laser Scanning Unit) SECTION</b> (P.173)
3	'CHANGE DRUM' on the LCD	The toner sensor cannot detect the toner sensor signal.	Go to <b>TONER SENSOR.... "TONER EMPTY", "TONER LOW", "CHANGE DRUM"</b> (P.182)
4	'OUT OF PAPER' on the LCD	Failed the paper sensor lever	Replace the paper sensor lever
		Failed the paper sensor	Go to <b>PAPER SENSOR..... "OUT OF PAPER"</b> (P.179)
5	'COVER OPEN' on the LCD	Failed the top cover open switch lever	Replace the top cover open switch lever
		Failed the top cover open switch	Go to <b>TOP COVER OPEN SWITCH</b> (P.177)
6	CALL SERVICE 1' on the LCD	The polygon motor of LSU is unusually	Check the connector and LSU and the digital board
7	CALL SERVICE 2' on the LCD	The laser of LSU is unusually	Check the connector and LSU and the digital board
8	CALL SERVICE 3' on the LCD	The fuser temperature is unusually	Check the connector and the fuser and the thermistor and the digital board
9	CALL SERVICE 4' on the LCD	The fan motor is unusually	Check the connector and the fan motor and the digital board

## 6.5.6. CALL SERVICE TROUBLESHOOTING GUIDE

### Call Service related error is most frequent.

Call Service 1 ----- Polygon doesn't rotate..... Refer to **LSU (Laser Scanning Unit) SECTION** (P.173).

- First, listen to the sound. If rotation sound isn't heard, check 24V line, POLON signal and POLCLK signal. If even a little of sound is heard, check XREADY signal.

Call Service 2 ----- Laser isn't output..... Refer to **LSU (Laser Scanning Unit) SECTION** (P.173)

- This can be judged only by referring to signal. Check 5V line, XHSYNC, SPC, VIDEO, LDON.

Call Service 3 ----- Detection of fixing temperature..... Refer to **HEAT LAMP CONTROL CIRCUIT** (P.188)

- \*Service mode \*655 tells the detection number and 3 latest temperatures of the thermistor. The cause distinction code of the Call Service 3 and the thermistor temperature is displayed. Maximum 3 latest temperatures are displayed showing the newest on the left. [AABB CCDD EEFF] AA, CC and EE show the cause distinction code and BB, DD and FF show their temperature.

### Cause distinction code

00: means that CALL SERVICE 3 has not been appeared.

01: means that it did not reach 56°C within 22 seconds since the heater was turned ON.

03: means that it did not reach the secondary stabilizing temperature (160°C) within 35 seconds from 56°C.

04: means that it became T2-40deg (120°C or below) after T2; the secondary stabilizing temperature (160°C). (The heater has burnt out.)

05: means that it became over 220°C.

06: means that during printing the SHORT of the thermistor (AD: 01h or below) was detected.

07: means that the thermistor's SHORT (AD:00h) and OPEN (AD: F9h or over) were detected.

Call Service 4 ----- Rotation of Fan..... Refer to **FAN MOTOR SECTION** (P.170)

- Connector isn't inserted firmly, dust is caught in and the fan is broken.
- \* As for Call Services 1, 2 and 4, turn the power OFF then ON to restart.

### <Note>

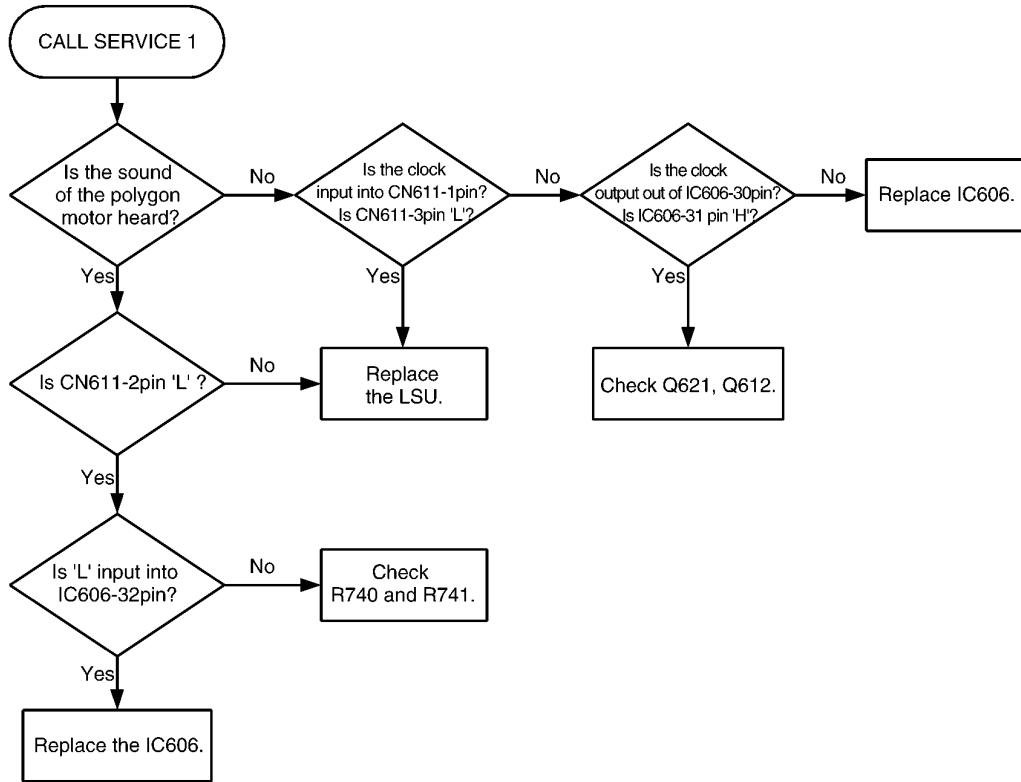

Once "CALL SERVICE3" is displayed, the unit does not disappear until the Factory Setup or Service Function #529 is executed. Therefore Service Function #529 should be executed before the confirmation, and #529 should be done after the countermeasure.

### 6.5.6.1. CALL SERVICE 1

"CALL SERVICE 1" means that the polygon motor inside the LSU does not rotate.

The rotation of the polygon motor is detected by IC606-32pin (XREADY).

After the LCD indicates "CALL SERVICE 1", turn the power OFF/ON.  
 Then, when the unit starts initial operation, confirm that the rotating sound of the polygon motor is heard before the engine motor starts to run.

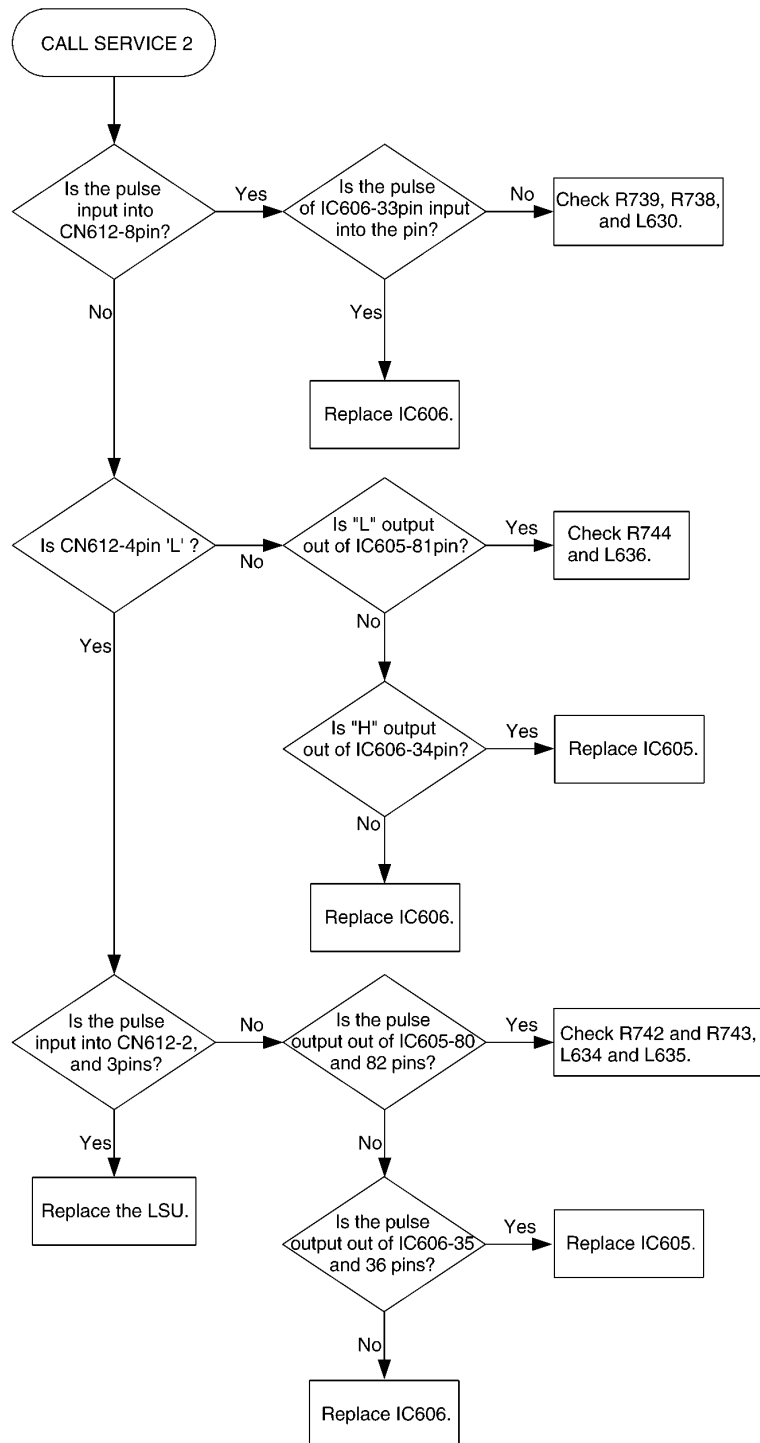

## 6.5.6.2. CALL SERVICE 2

"CALL SERVICE 2" means that the synchronous signal out of the LSU cannot be detected.

The synchronous signal out of the LSU is detected by IC 606-33pin. (XHSYNC)

After the LCD indicates "CALL SERVICE 2", turn the power ON/OFF, then confirm the waveform when the unit starts initial operation.

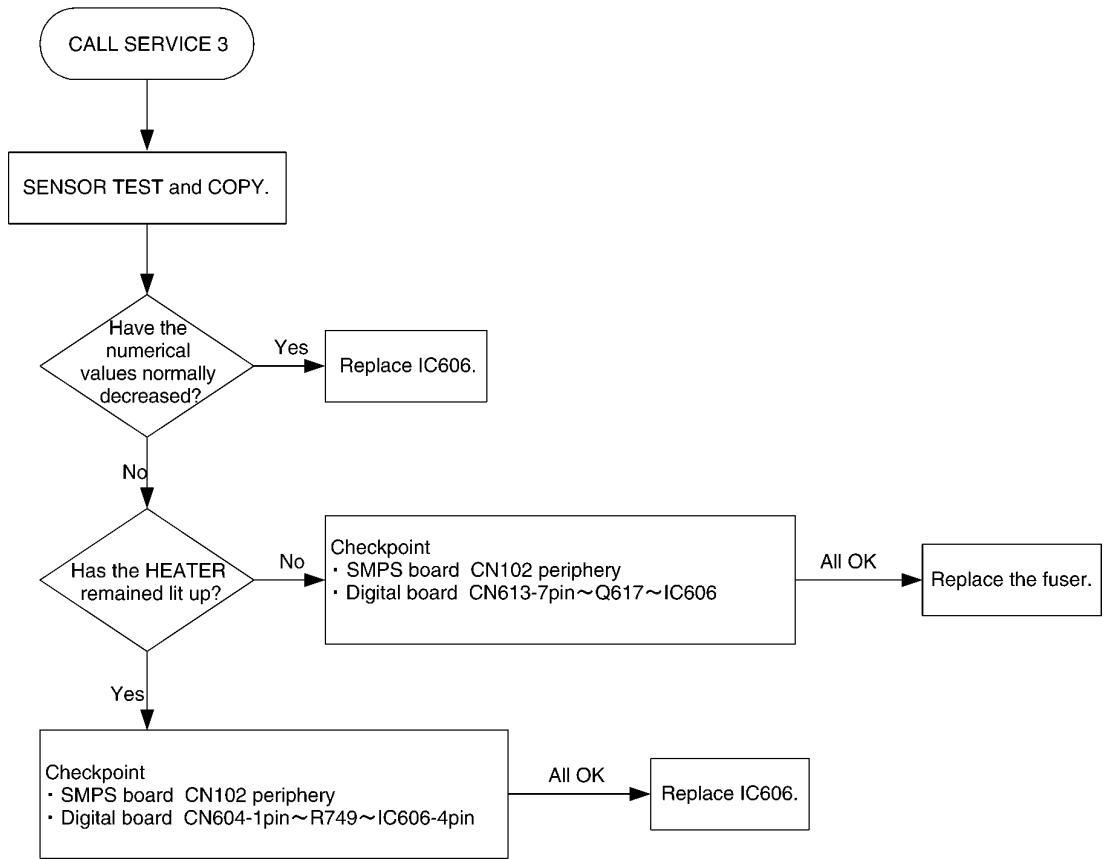

**Note:**

As for the "Pulse" waveform of the above flow chart, see the timing chart.

### 6.5.6.3. CALL SERVICE 3

"CALL SERVICE 3" means that the temperature of the fuser does not rise up to or exceed a constant temperature. The temperature is monitored with the thermistor inside the fuser and detected with the voltage input into IC 606-4pin.

After the LCD indicate "CALL SERVICE 3" , perform the MENU → # → 9000 → ✕ 529. Then, turn the power OFF/ON. Perform the SENSOR TEST in service mode. SENSOR TEST can be performed by pressing MENU → # → 9000 → ✕ 815. In this state, perform the copy operation to confirm how the two-digit numbers on the LCD change. In normal times, 'DF(25°C)' is displayed in the waiting state, and '60(160°C)' or its approximate numbers are displayed during printing.

\*When Call Service 3 is occurred, the cause can be distinguished. Refer to page 80 for details.

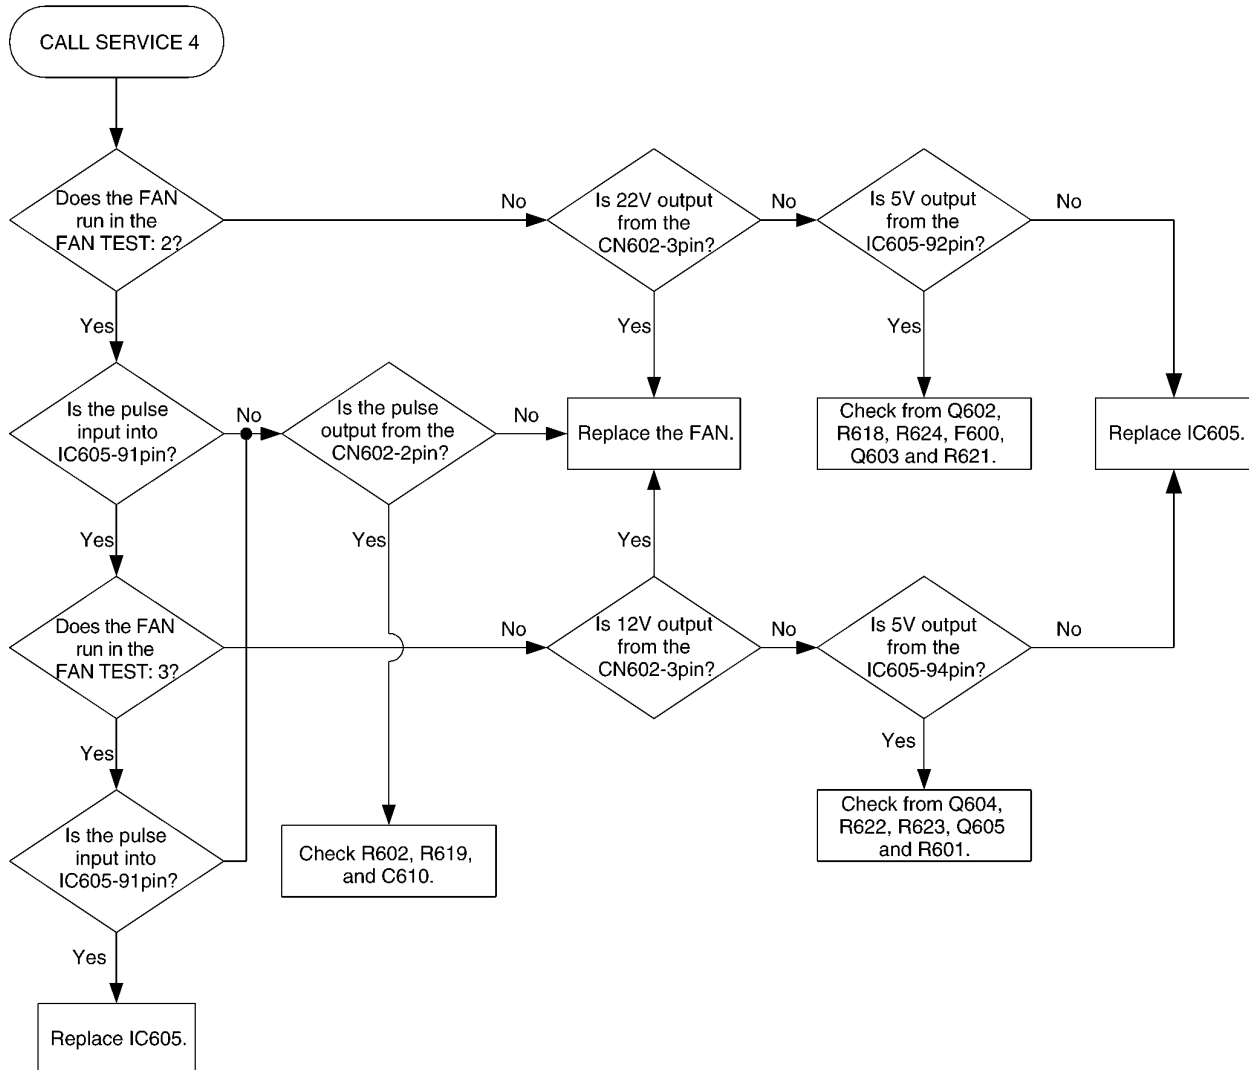

### 6.5.6.4. CALL SERVICE 4

"CALL SERVICE 4" means that the FAN does not run or the running of the FAN cannot be detected normally.

The running of the FAN is detected by IC 605-91pin. "CALL SERVICE 4" is displayed when it detects NG five times continuously.

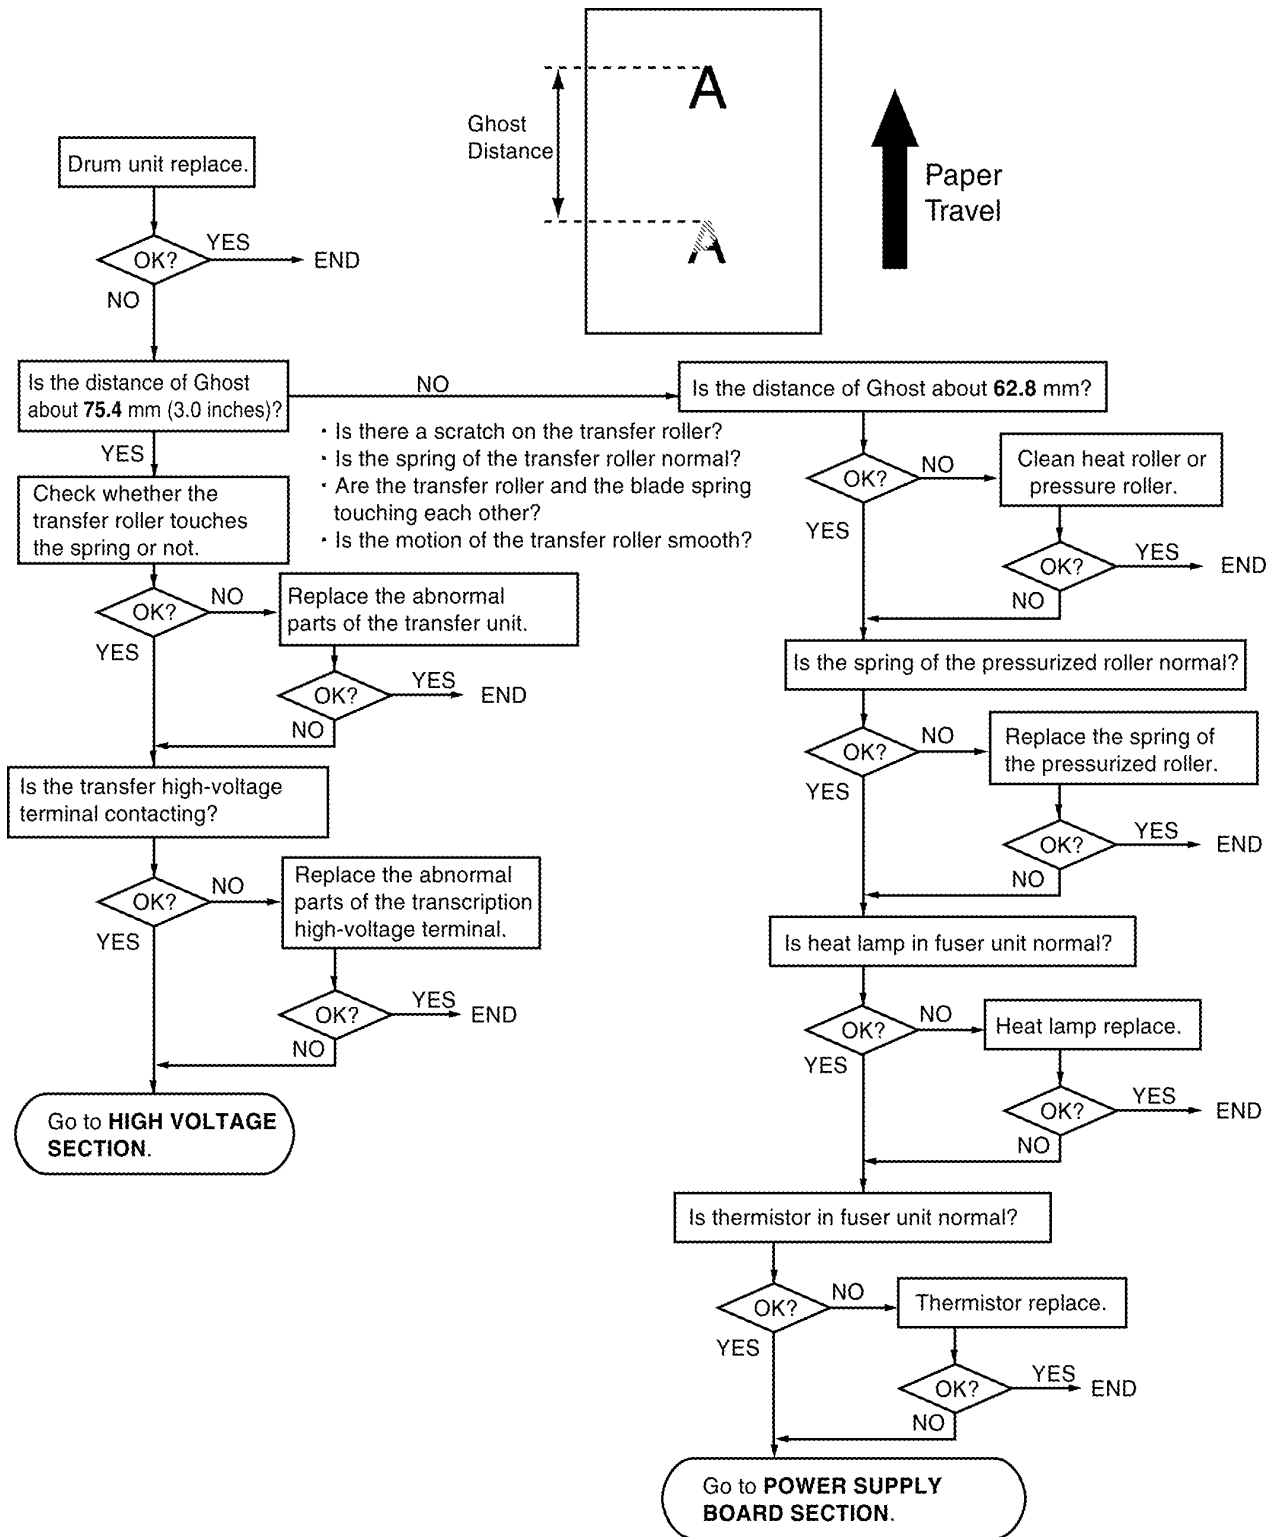

After repairing, copy five times.If "CALL SERVICE 4 " is displayed,check again.

After the LCD indicates "CALL SERVICE 4 ", turn the power OFF/ON.  
Then, perform the FAN TEST in service mode.  
This can be performed by pressing MENU→#→9000→\*677.  
1: OFF (Default)  
2: ON (High Speed)  
3: ON (Low Speed)

## 6.5.7. PRINT

### 6.5.7.1. GHOST IMAGE

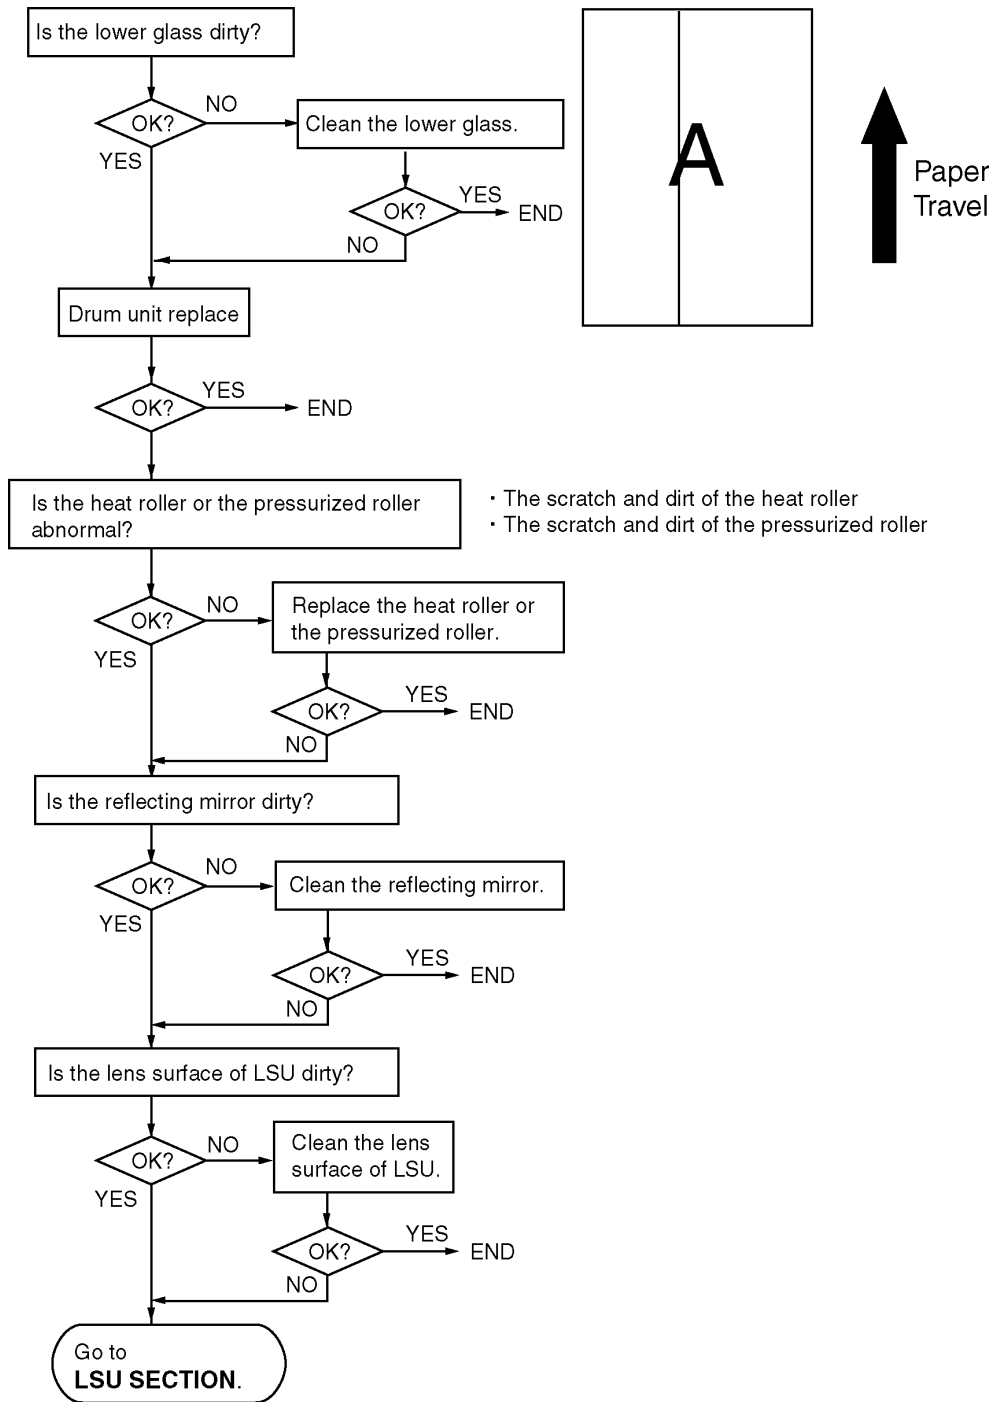

**CROSS REFERENCE:**

**HIGH VOLTAGE SECTION(P.140)**

**POWER SUPPLY BOARD SECTION(P.144)**

### 6.5.7.2. DARK OR WHITE VERTICAL LINE

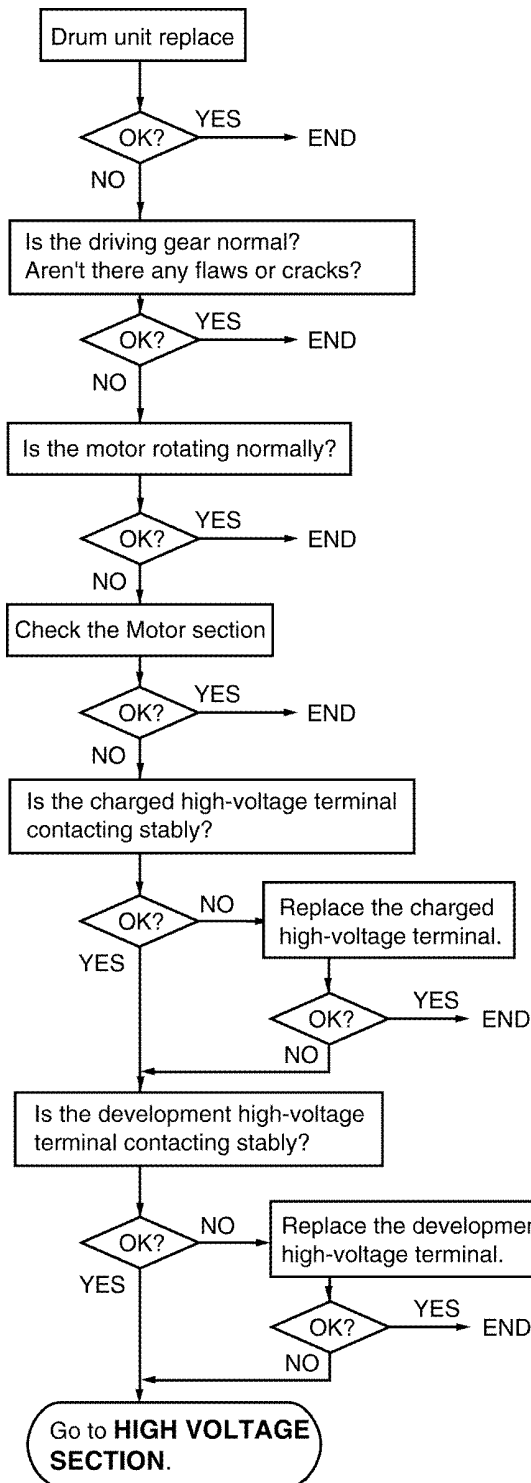

**Note:**

When wiping the lower glass, reflecting mirror and LSU lens, use a dry and soft cloth.

**CROSS REFERENCE:**

LSU SECTION (P.137)

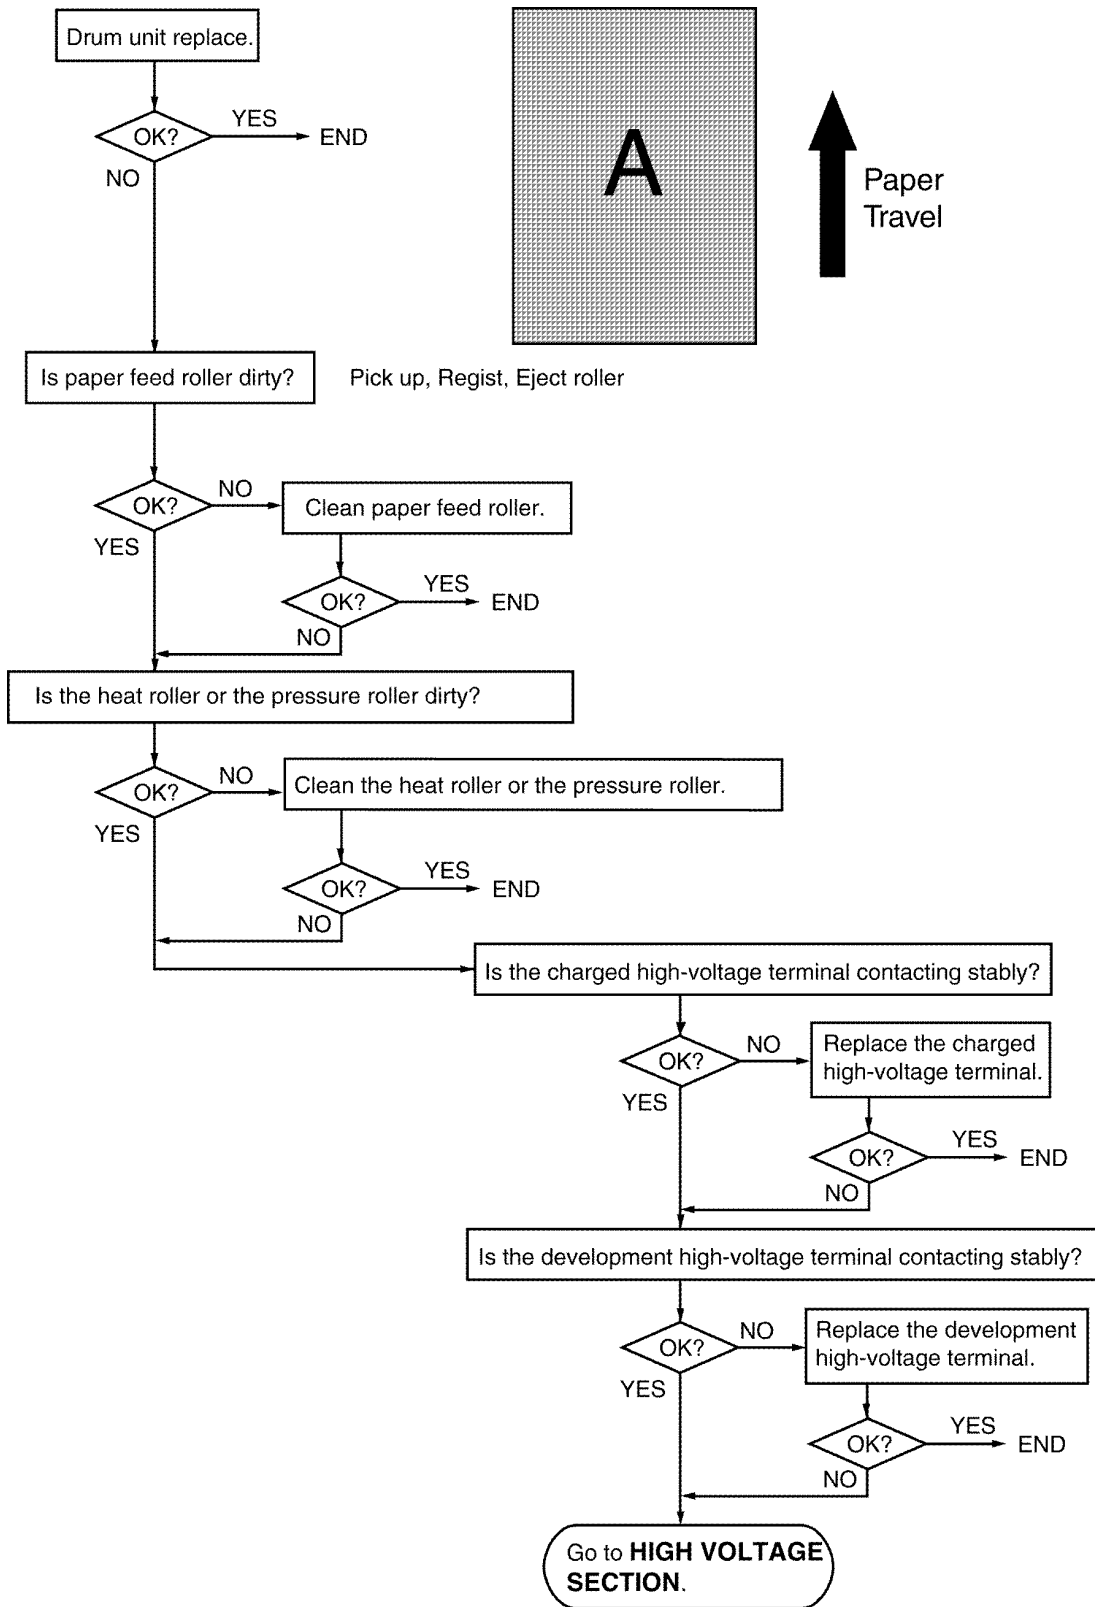

### 6.5.7.3. DARK OR WHITE HORIZONTAL LINE

- It is necessary to describe the information about the lines that cannot be troubleshooted in such as halftone.
- When there is the information about the troubleshooted horizontal line, please add the description of it.

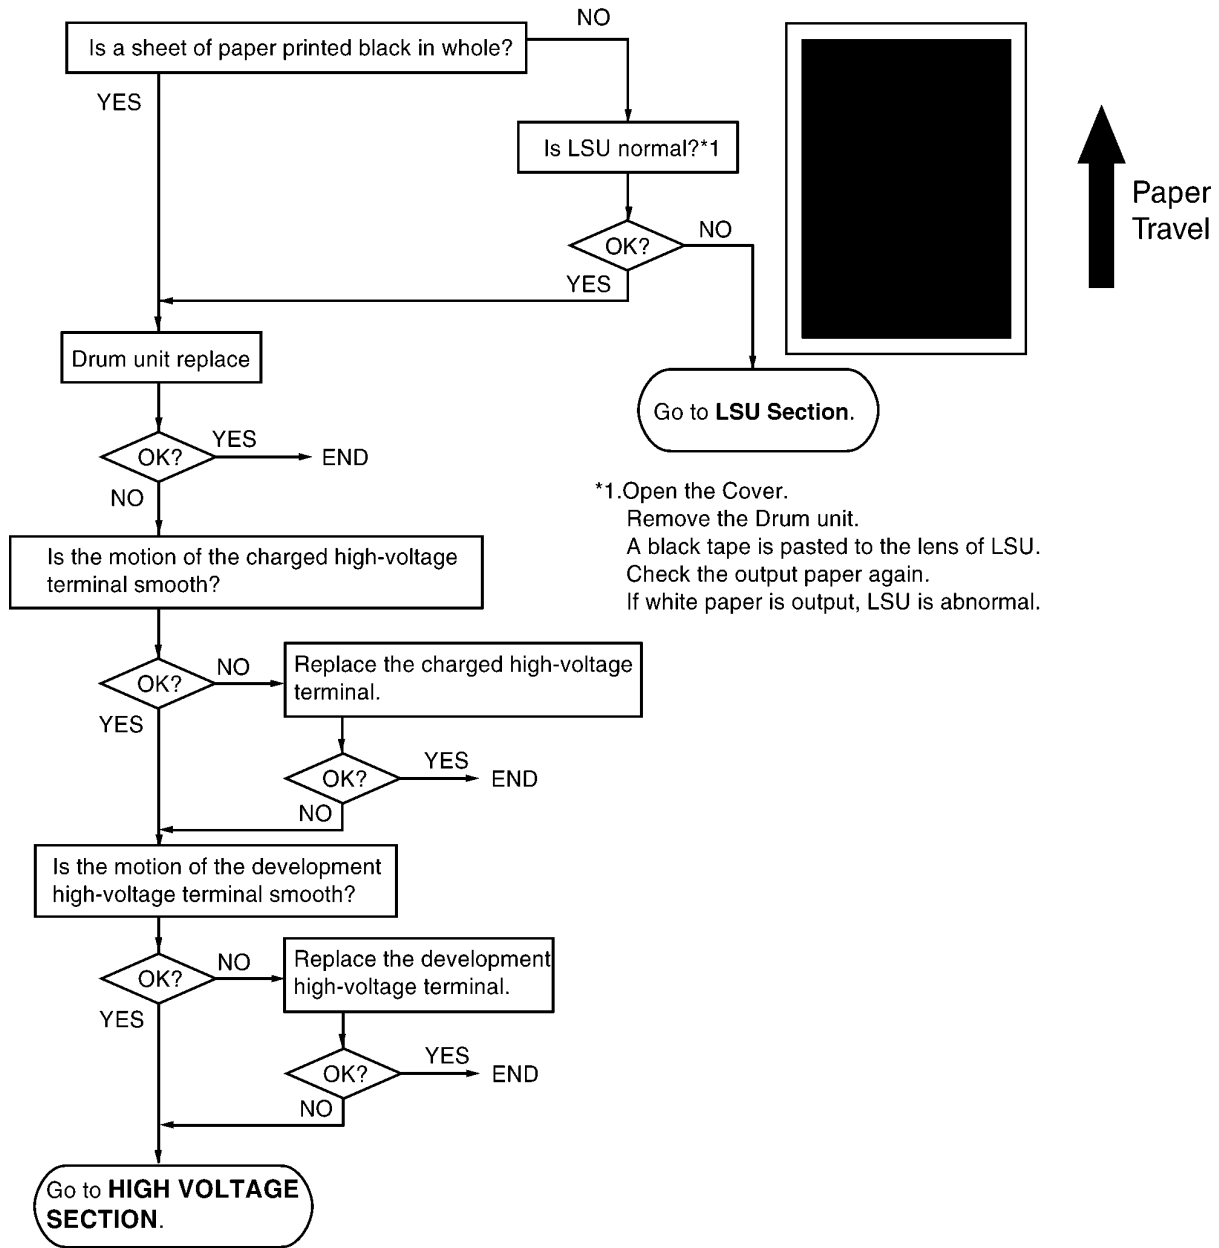

**CROSS REFERENCE:**  
**HIGH VOLTAGE SECTION (P.140)**

### 6.5.7.4. DIRTY OR HALF DARKNESS BACKGROUND

**CROSS REFERENCE:**  
**HIGH VOLTAGE SECTION (P.140)**

### 6.5.7.5. BLACK PRINT

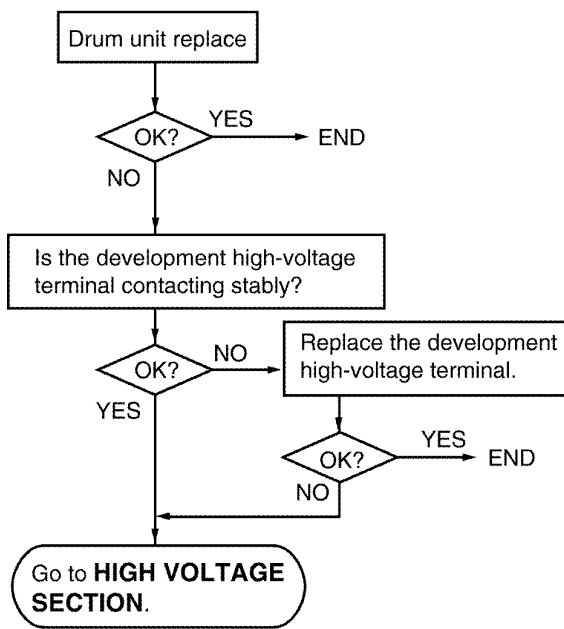

**CROSS REFERENCE:**

**HIGH VOLTAGE SECTION (P.140)**

**LSU SECTION (P.137)**

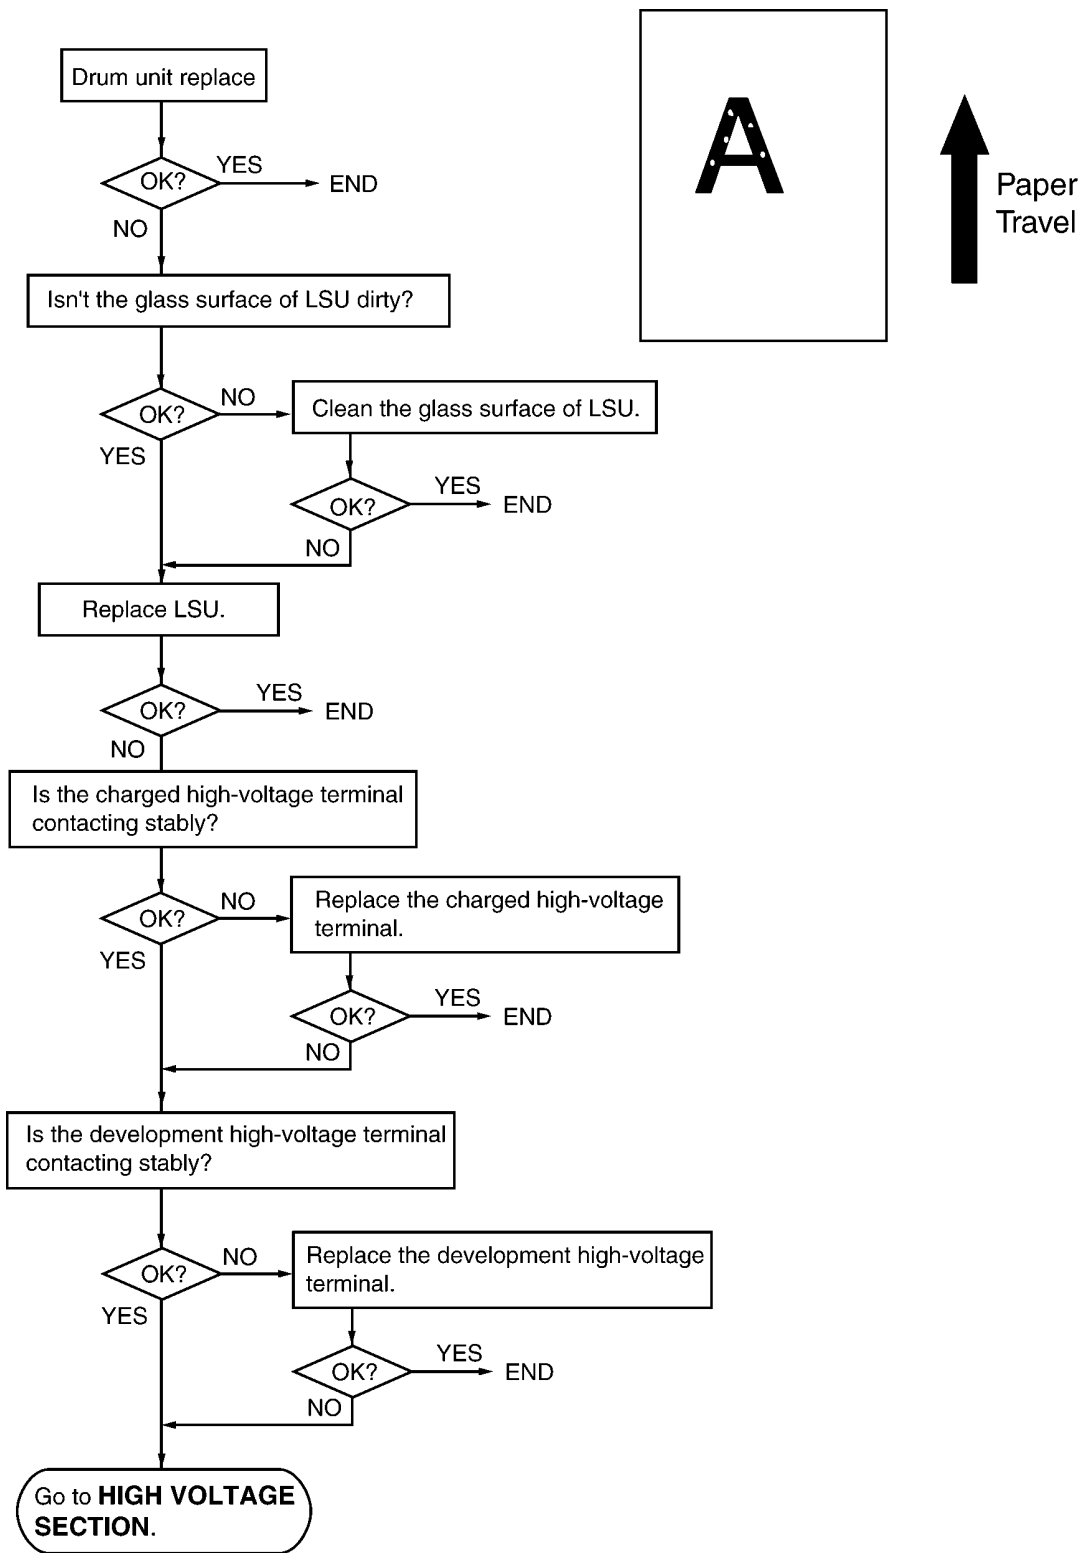

**6.5.7.6. LIGHT PRINT**

**CROSS REFERENCE:**

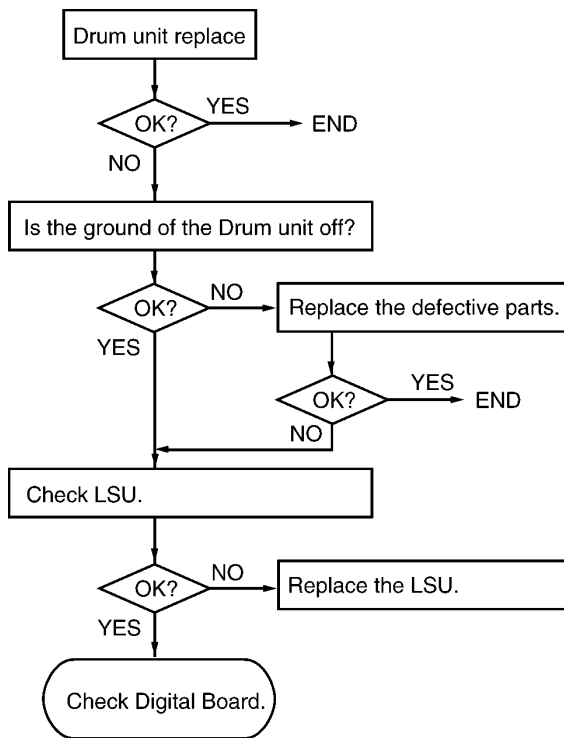

**HIGH VOLTAGE SECTION (P.140)**

### 6.5.7.7. BLACK DENSITY IS LIGHT OR UNEVEN

**CROSS REFERENCE:**  
**HIGH VOLTAGE SECTION (P.140)**

### 6.5.7.8. BLANK PRINT

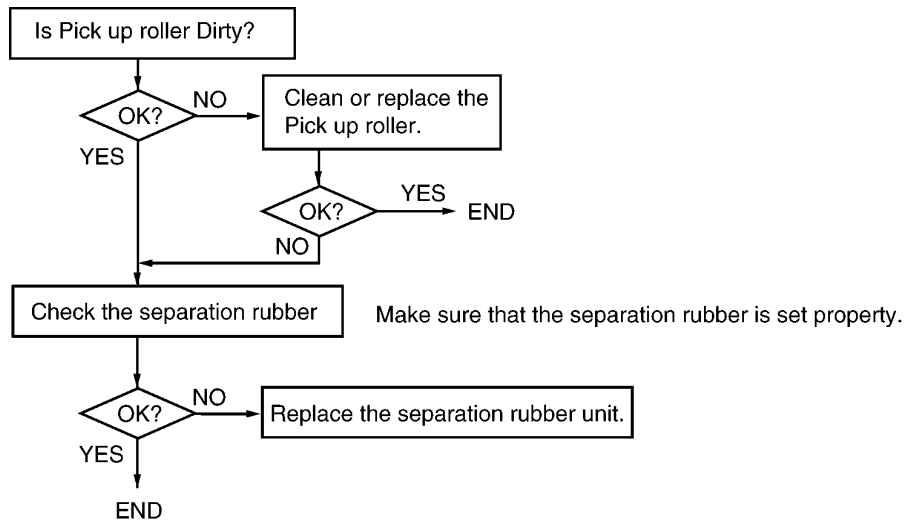

### 6.5.7.9. BLACK OR WHITE POINT

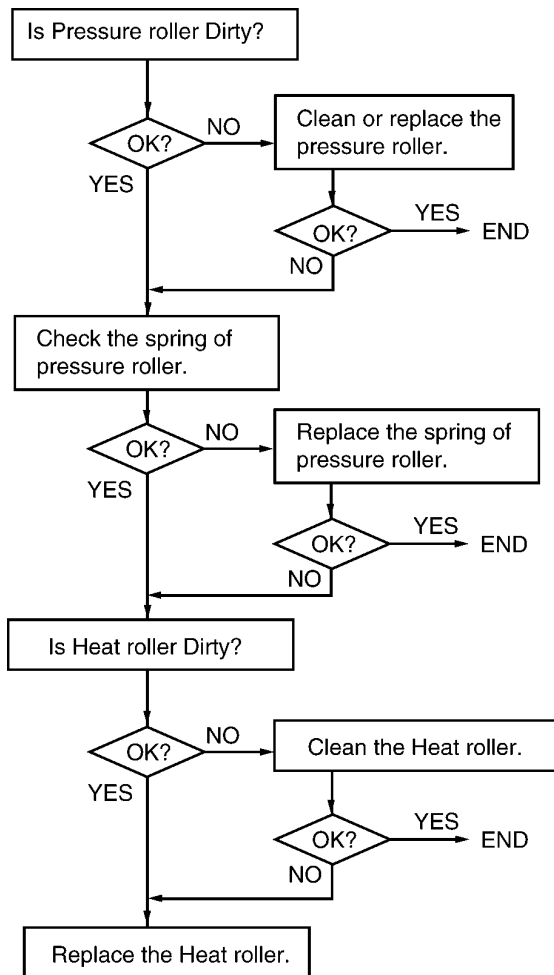

### 6.5.8. RECORDING PAPER FEED

#### 6.5.8.1. MULTIPLE FEED

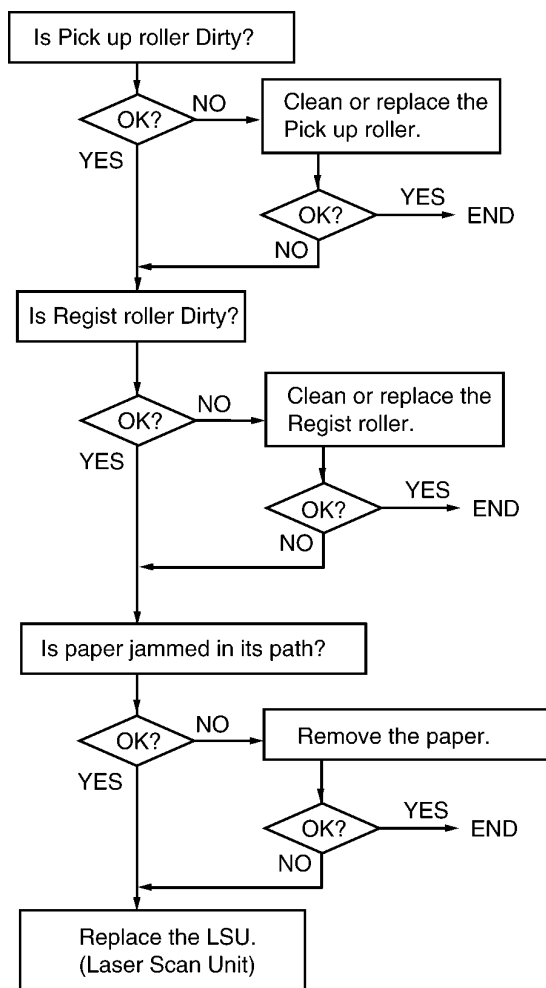

#### 6.5.8.2. THE RECORDING PAPER IS WAVED OR WRINKLED

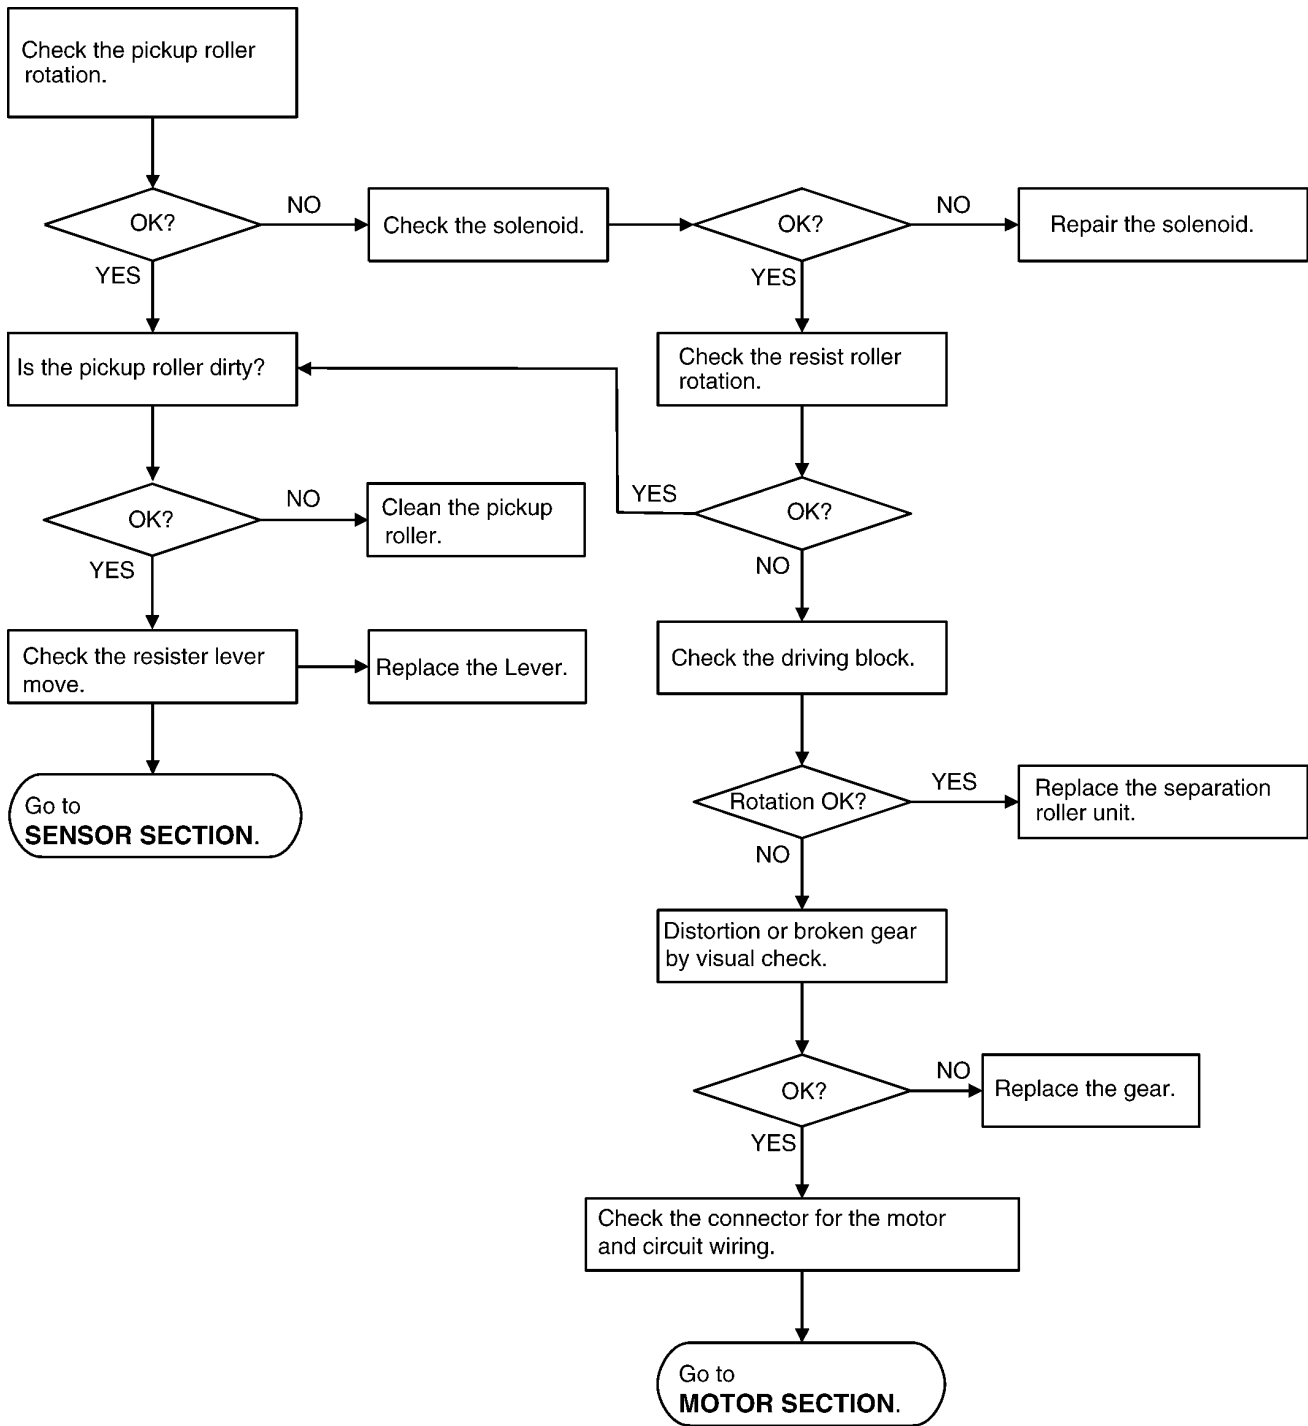

## 6.5.8.3. SKEW

### 6.5.8.4. THE RECORDING PAPER DOES NOT FEED

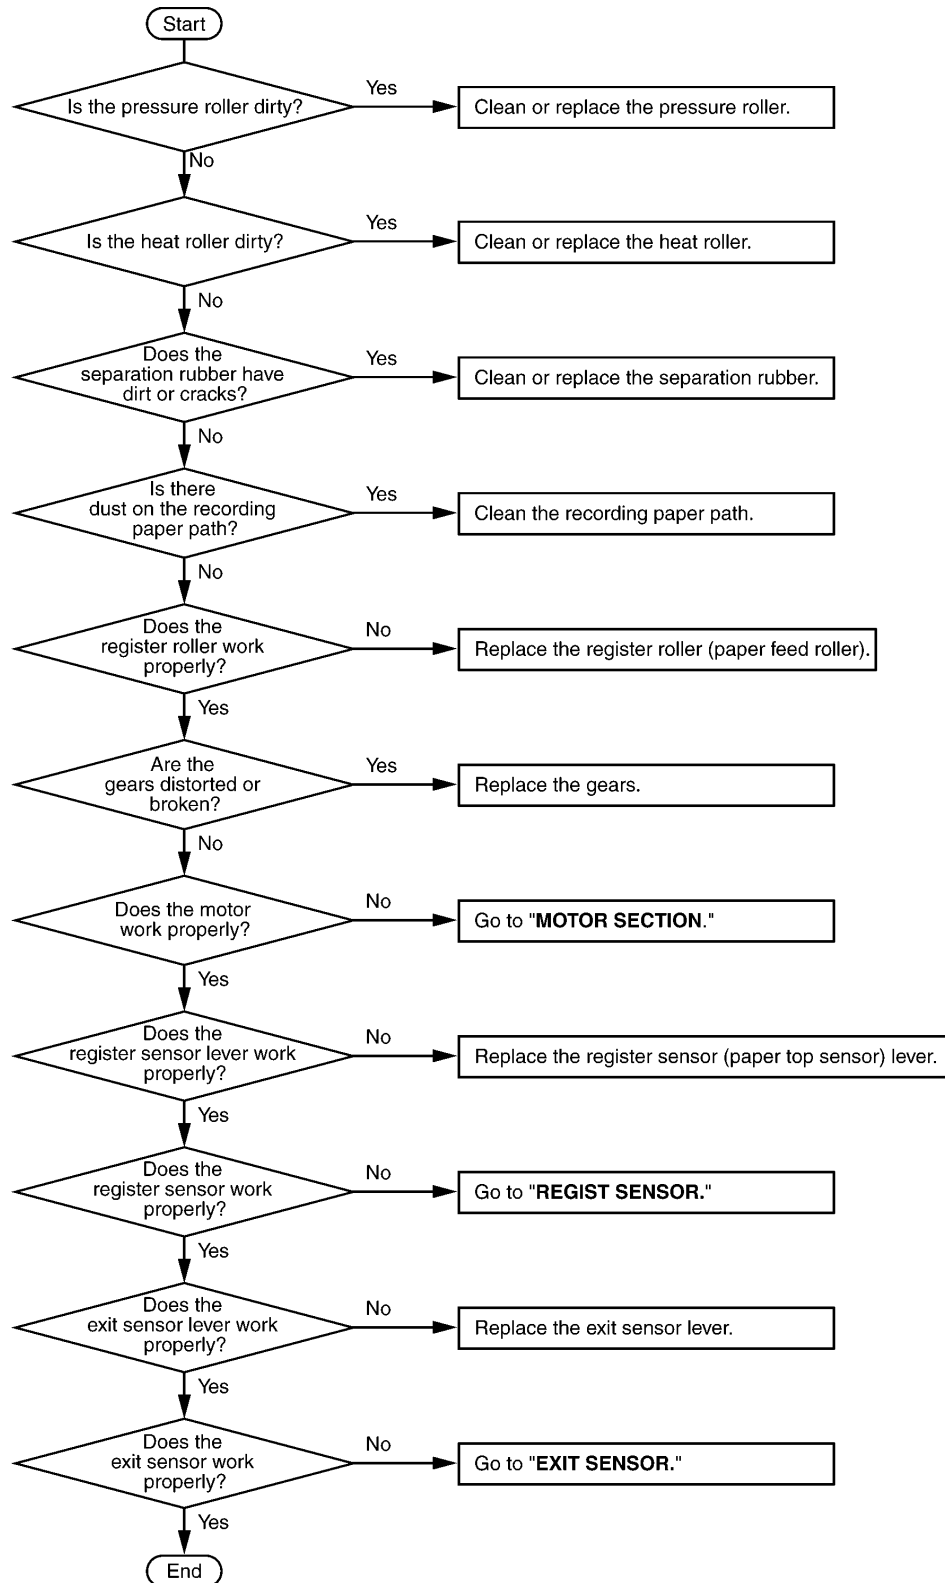

**CROSS REFERENCE:**

**SENSOR SECTION** (P.132)

**MOTOR SECTION** (P.135)

### 6.5.8.5. THE RECORDING PAPER JAM

#### CROSS REFERENCE:

**PAPER EXIT SENSOR..... "PAPER JAMMED"** (P.179)

**FAN MOTOR SECTION** (P.170)

**REGIST SENSOR** (P.178)

When the recording paper jam is occurred, the service

mode \*630 distinguishes the cause.

0:No Paper Jam

1:Failed pick up

2:The paper top sensor is not turned OFF although the fixed time had passed since the sensor was turned ON.

3:The paper eject sensor is not turned ON although the fixed time had passed since the paper top sensor was turned ON.

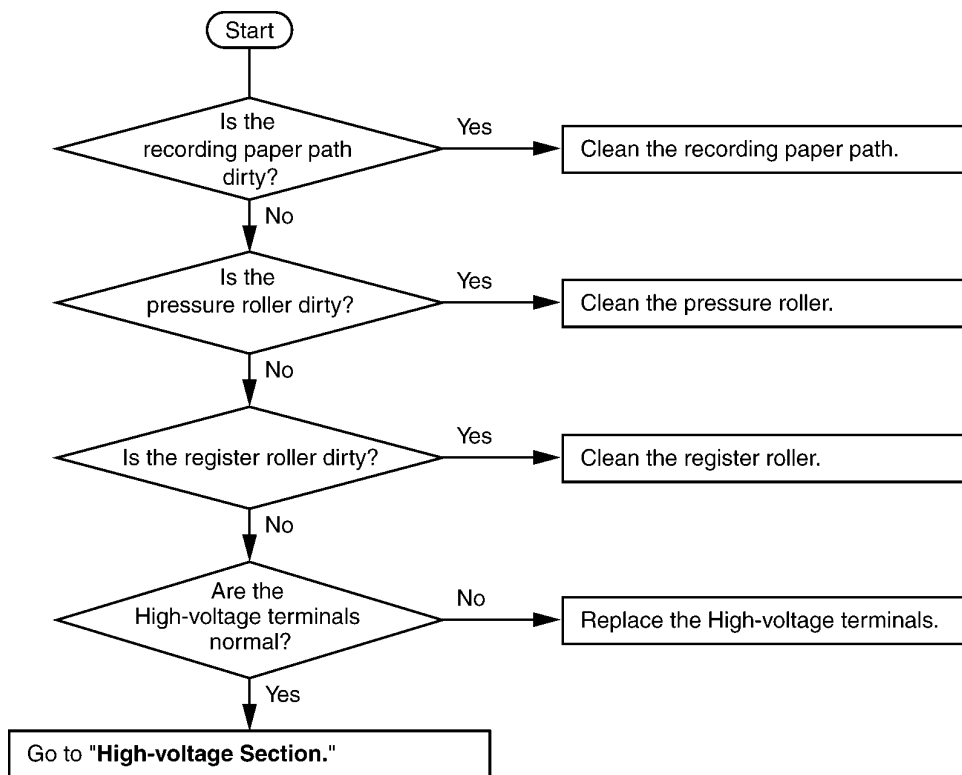

4:The paper eject sensor is not turned OFF although the fixed time had passed since it was turned ON.

5:The register sensor (paper top sensor) or paper exit sensor was turned ON before the motor started to rotate.

6:The register sensor (paper top sensor) chattered.

7:The paper exit sensor chattered.

### 6.5.8.6. BACK SIDE OF THE RECORDING PAPER IS DIRTY

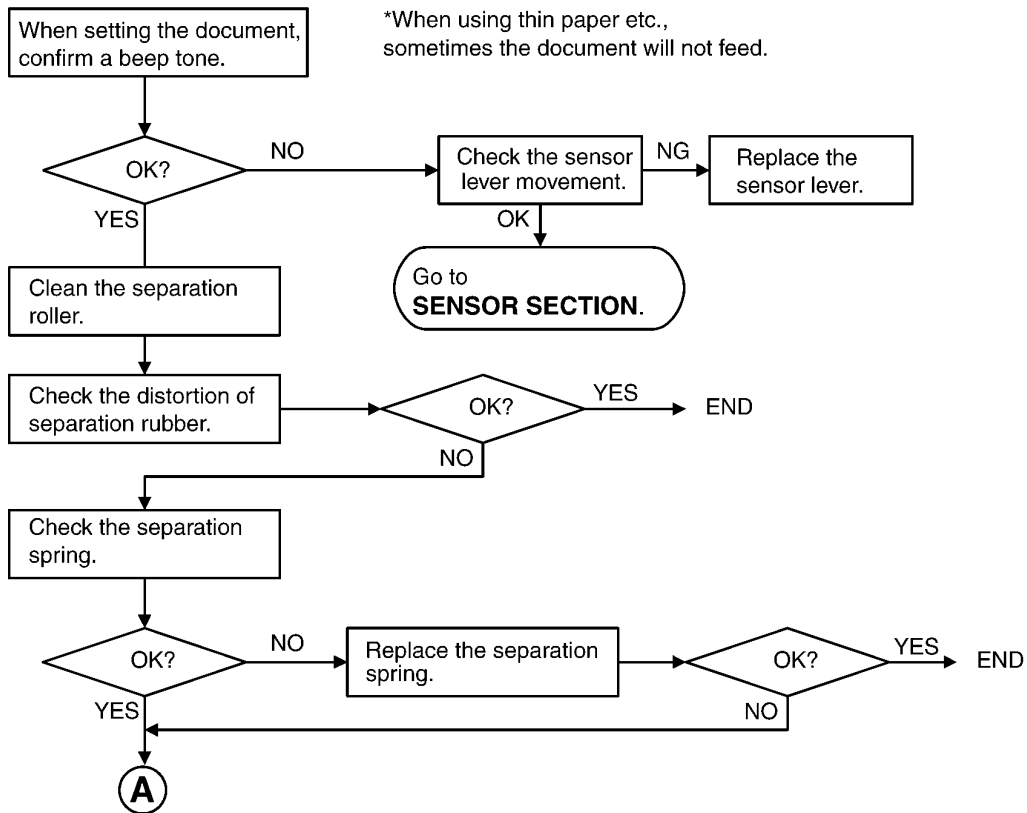

**CROSS REFERENCE:**

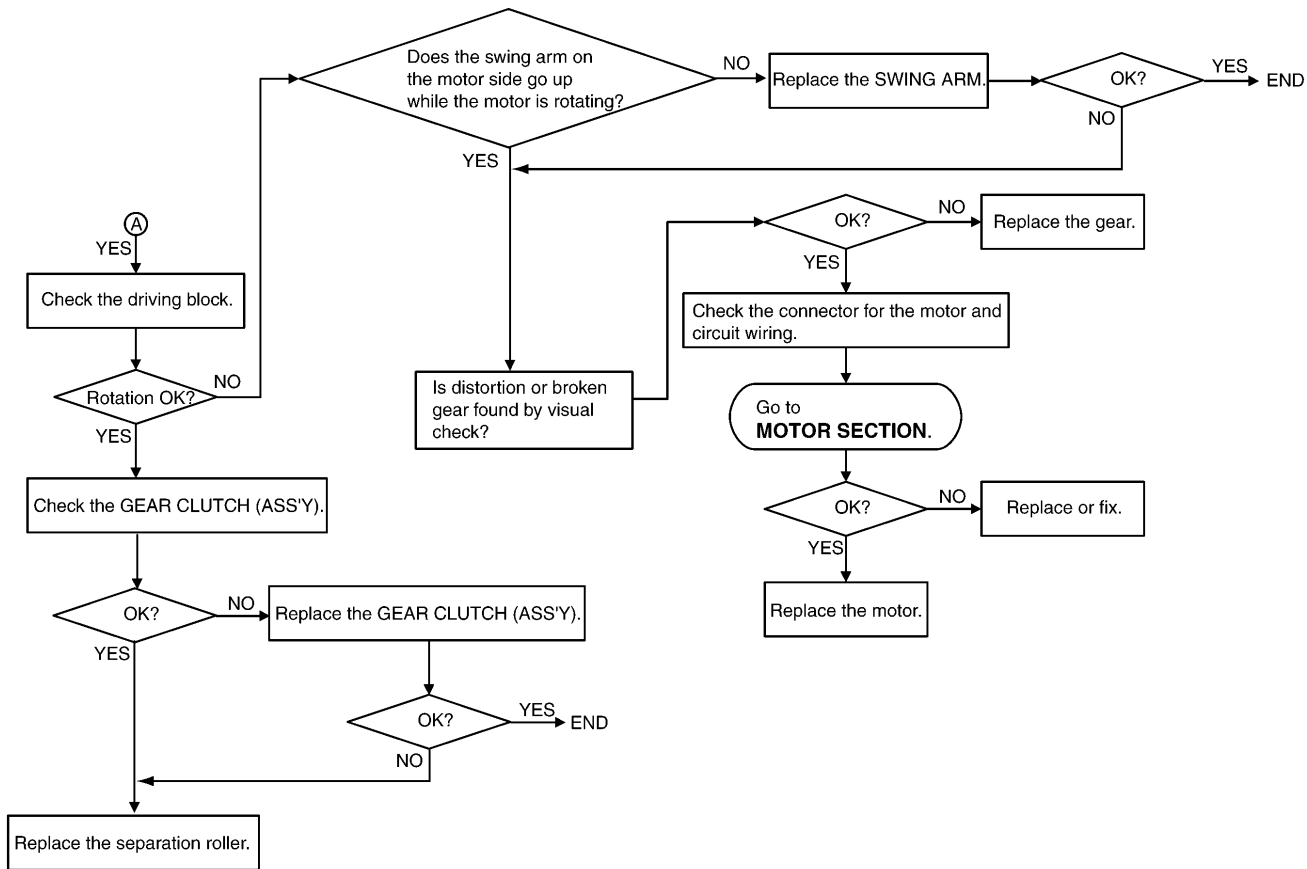

**HIGH VOLTAGE SECTION (P.140)**

### 6.5.9. ADF (Auto document feed) SECTION

#### 6.5.9.1. NO DOCUMENT FEED,DOCUMENT JAM and MULTIPLE DOCUMENT FEED.

**CROSS REFERENCE:**  
**SENSOR SECTION (P.132)**

Depending on the circumstances, change the roller, one-way spring gear, etc., as well as the other rollers or parts.

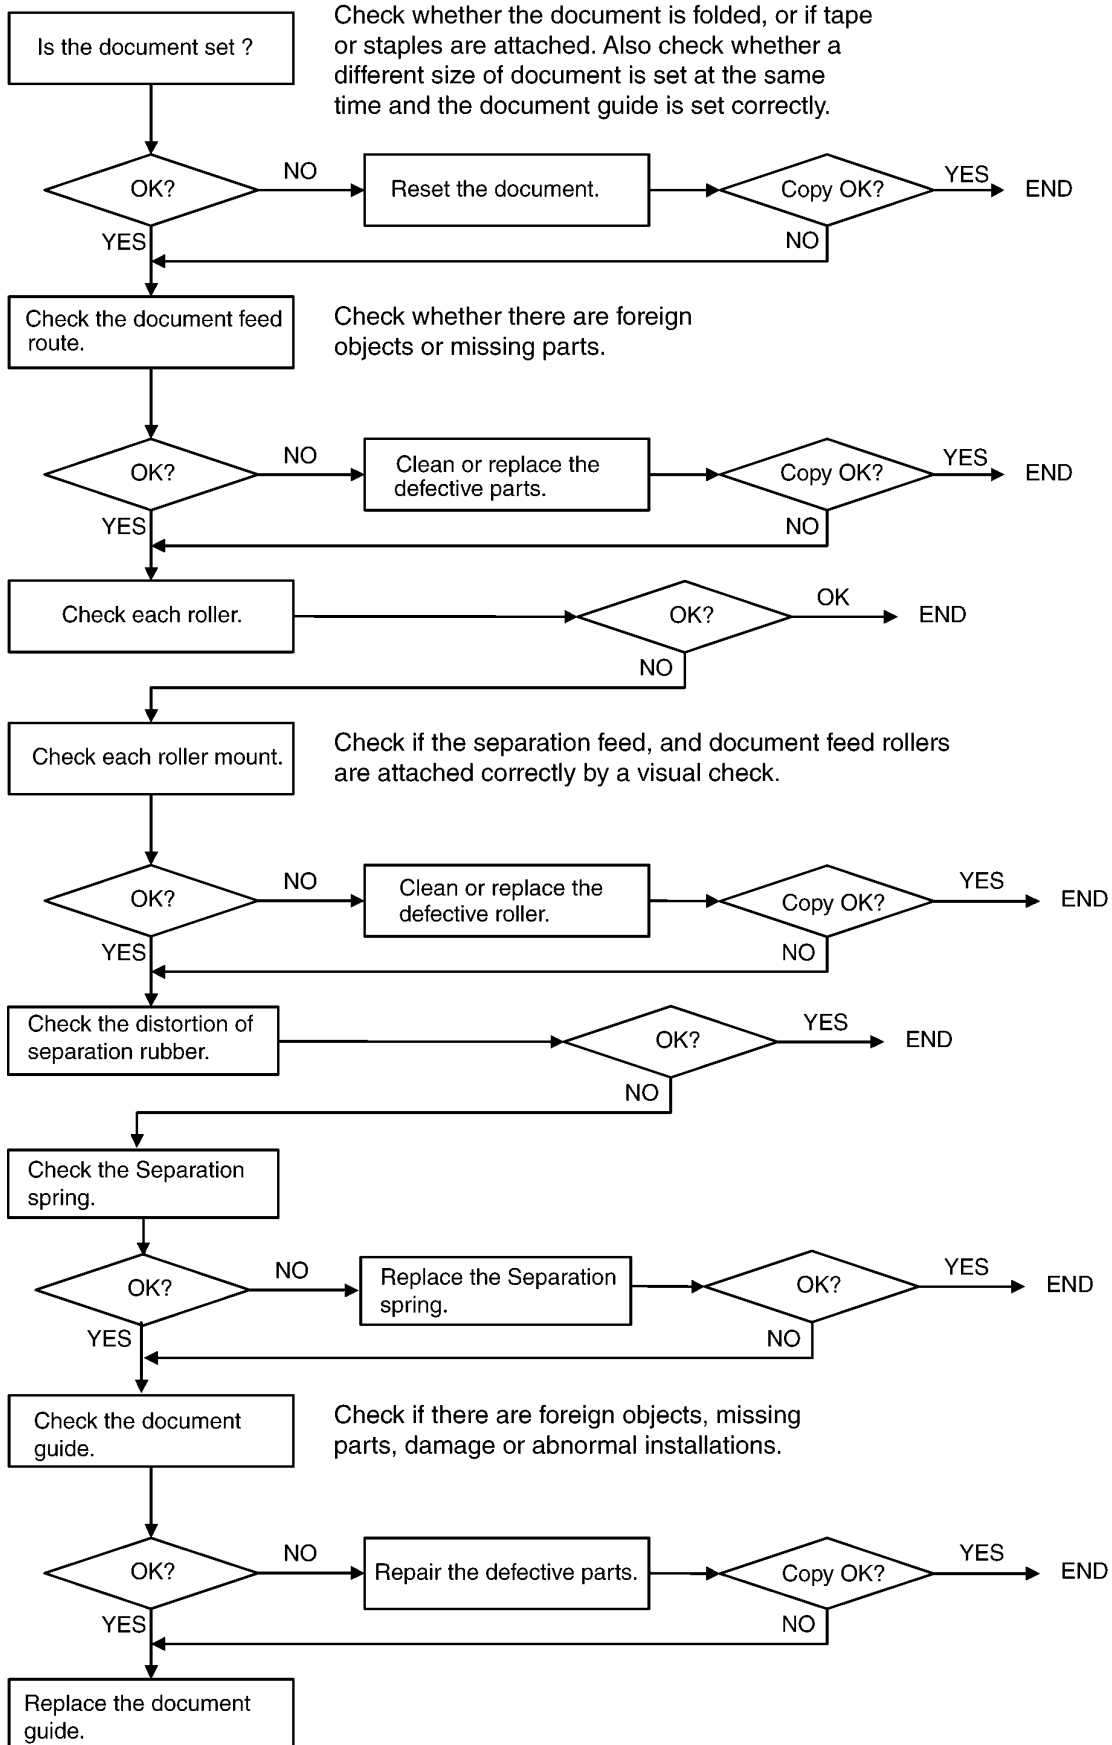

Fig. b

When confirming if the characters are extended or distorted on, if the feed problem occurs, use this test chart. (Fig b)

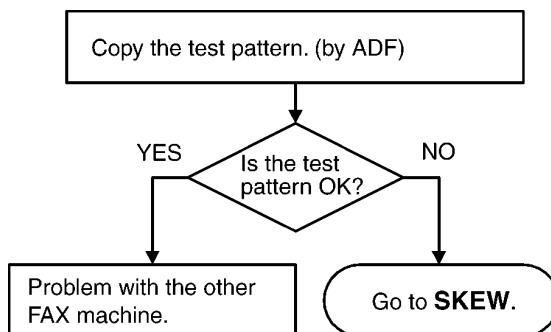

**CROSS REFERENCE:**

### 6.5.9.2. SKEW (ADF)

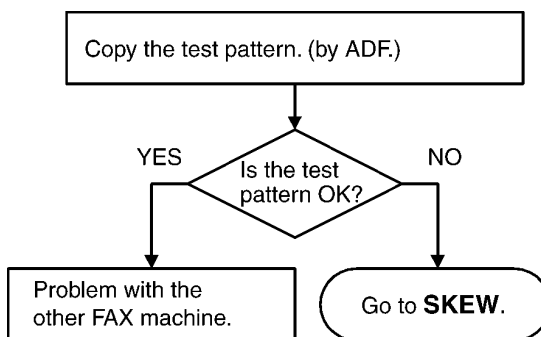

### 6.5.9.3. THE SENT FAX DATA IS SKEWED

**CROSS REFERENCE:**

**SKEW (ADF) (P.104)**

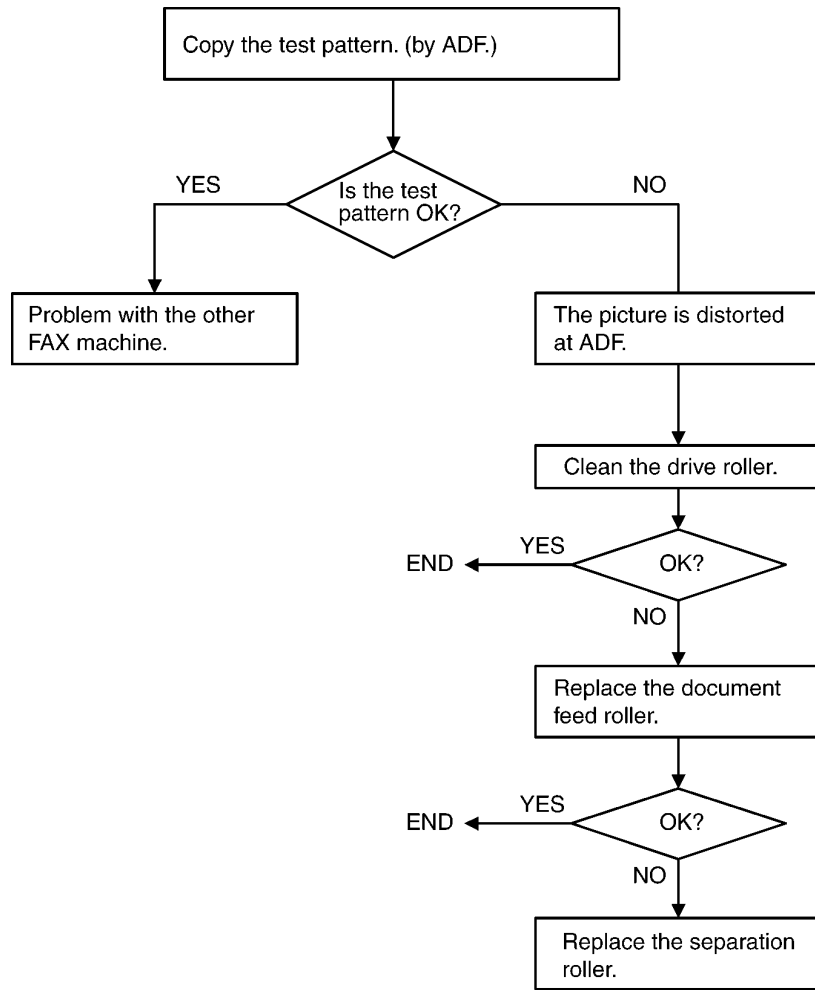

### 6.5.9.4. THE RECEIVED FAX DATA IS SKEWED

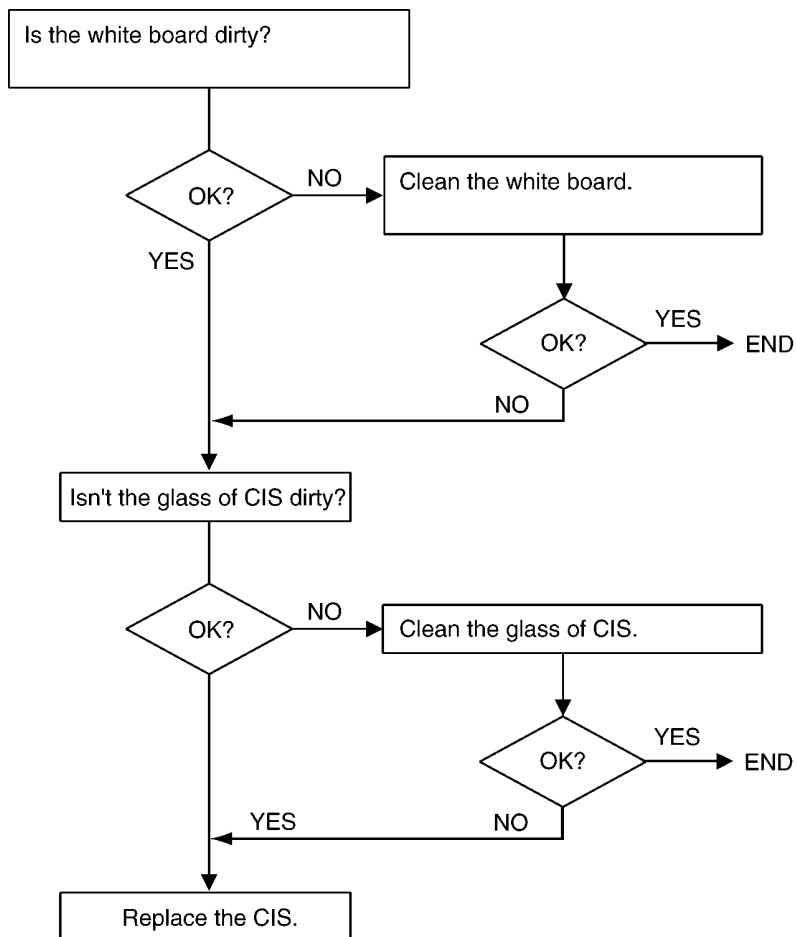

**CROSS REFERENCE:**

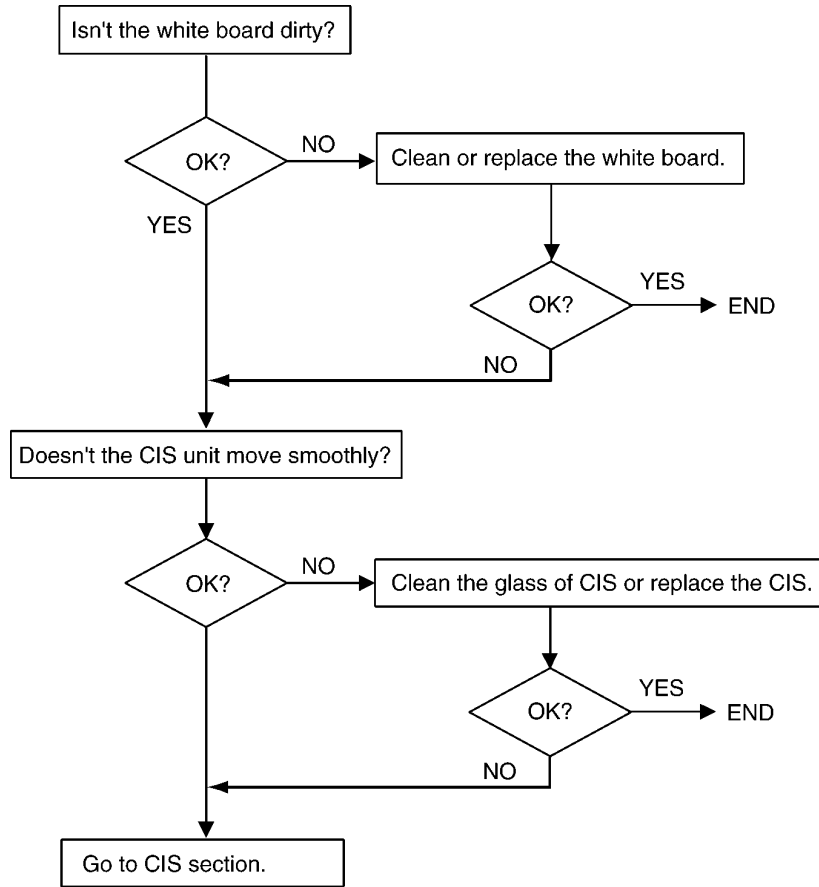

**SKEW (P.97)**

### 6.5.9.5. THE RECEIVED OR COPIED DATA IS EXPANDED

**6.5.9.6. BLACK OR WHITE VERTICAL LINE IS COPIED**

### 6.5.9.7. AN ABNORMAL IMAGE IS COPIED

**CROSS REFERENCE:**

**CIS (Contact Image Sensor) SECTION (P.138)**

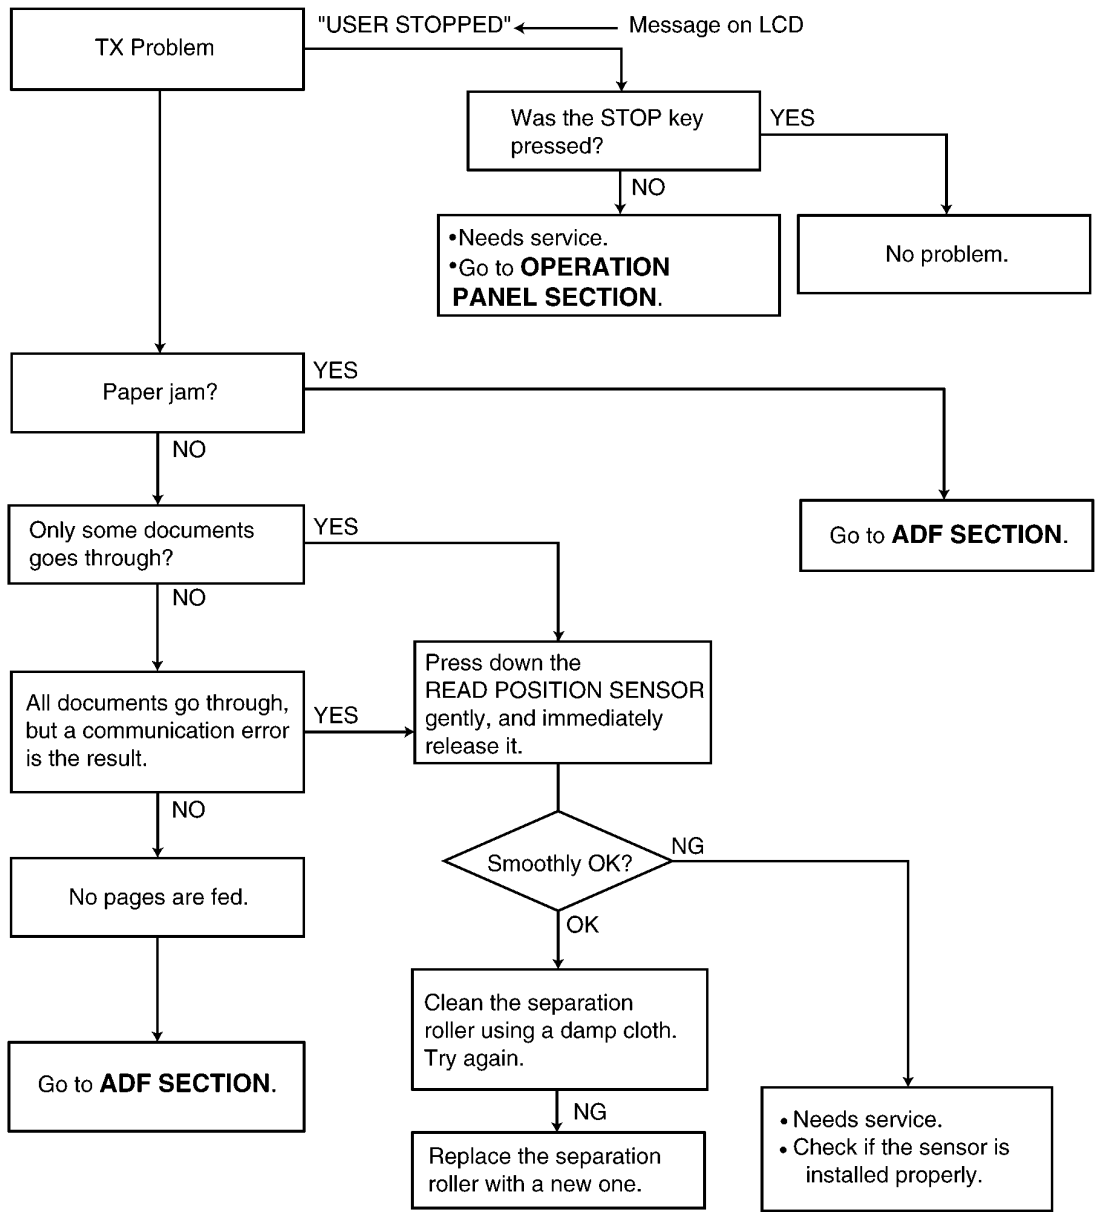

## 6.5.10. COMMUNICATION SECTION

Find the problem in the table shown below, and refer to the corresponding troubleshooting procedure in **DEFECTIVE FACSIMILE SECTION (P.110)**.

No.	Symptom	Content	Possible cause
1	The paper dose not feed properly when faxing. (Copying is also not possible.)	Troubleshooting	Problem with the feeding mechanism. (Refer to <b>TRANSMIT PROBLEM (P.110)</b> )
2	The fax transmits successfully one time and fails another. (Copying is also possible.)	Troubleshooting	Problem with the service line or with the receiver's fax. (Refer to <b>SOMETIME THERE IS A TRANSMIT PROBLEM (P.111)</b> )
3	The fax receives successfully one time and fails another. (Copying is also possible.)	Troubleshooting	Problem with the service line or with the transmitter's fax. (Refer to <b>RECEIVE PROBLEM (P.112)</b> )
4	The fax completely fails to transmit or receive. (Copying is also possible.)	Troubleshooting	Problem with the electric circuit. (Refer to <b>THE UNIT CAN COPY, BUT CANNOT TRANSMIT/RECEIVE (P.113)</b> )
5	The fax fails either to transmit or receive when making a long distance or an international call. (Copying is also possible.)	Detailed description of the possible causes (Similar to troubleshooting items No.2 and No.3.)	Problem with the service line.
6	The fax image is poor when transmitting or receiving during a long distance or international call.		
7	No.1-No.5	The troubleshooting procedure for each error code will be printed on the communication result report.	(Refer to <b>HOW TO OUTPUT THE JOURNAL REPORT (P.118)</b> )

### 6.5.10.1. DEFECTIVE FACSIMILE SECTION

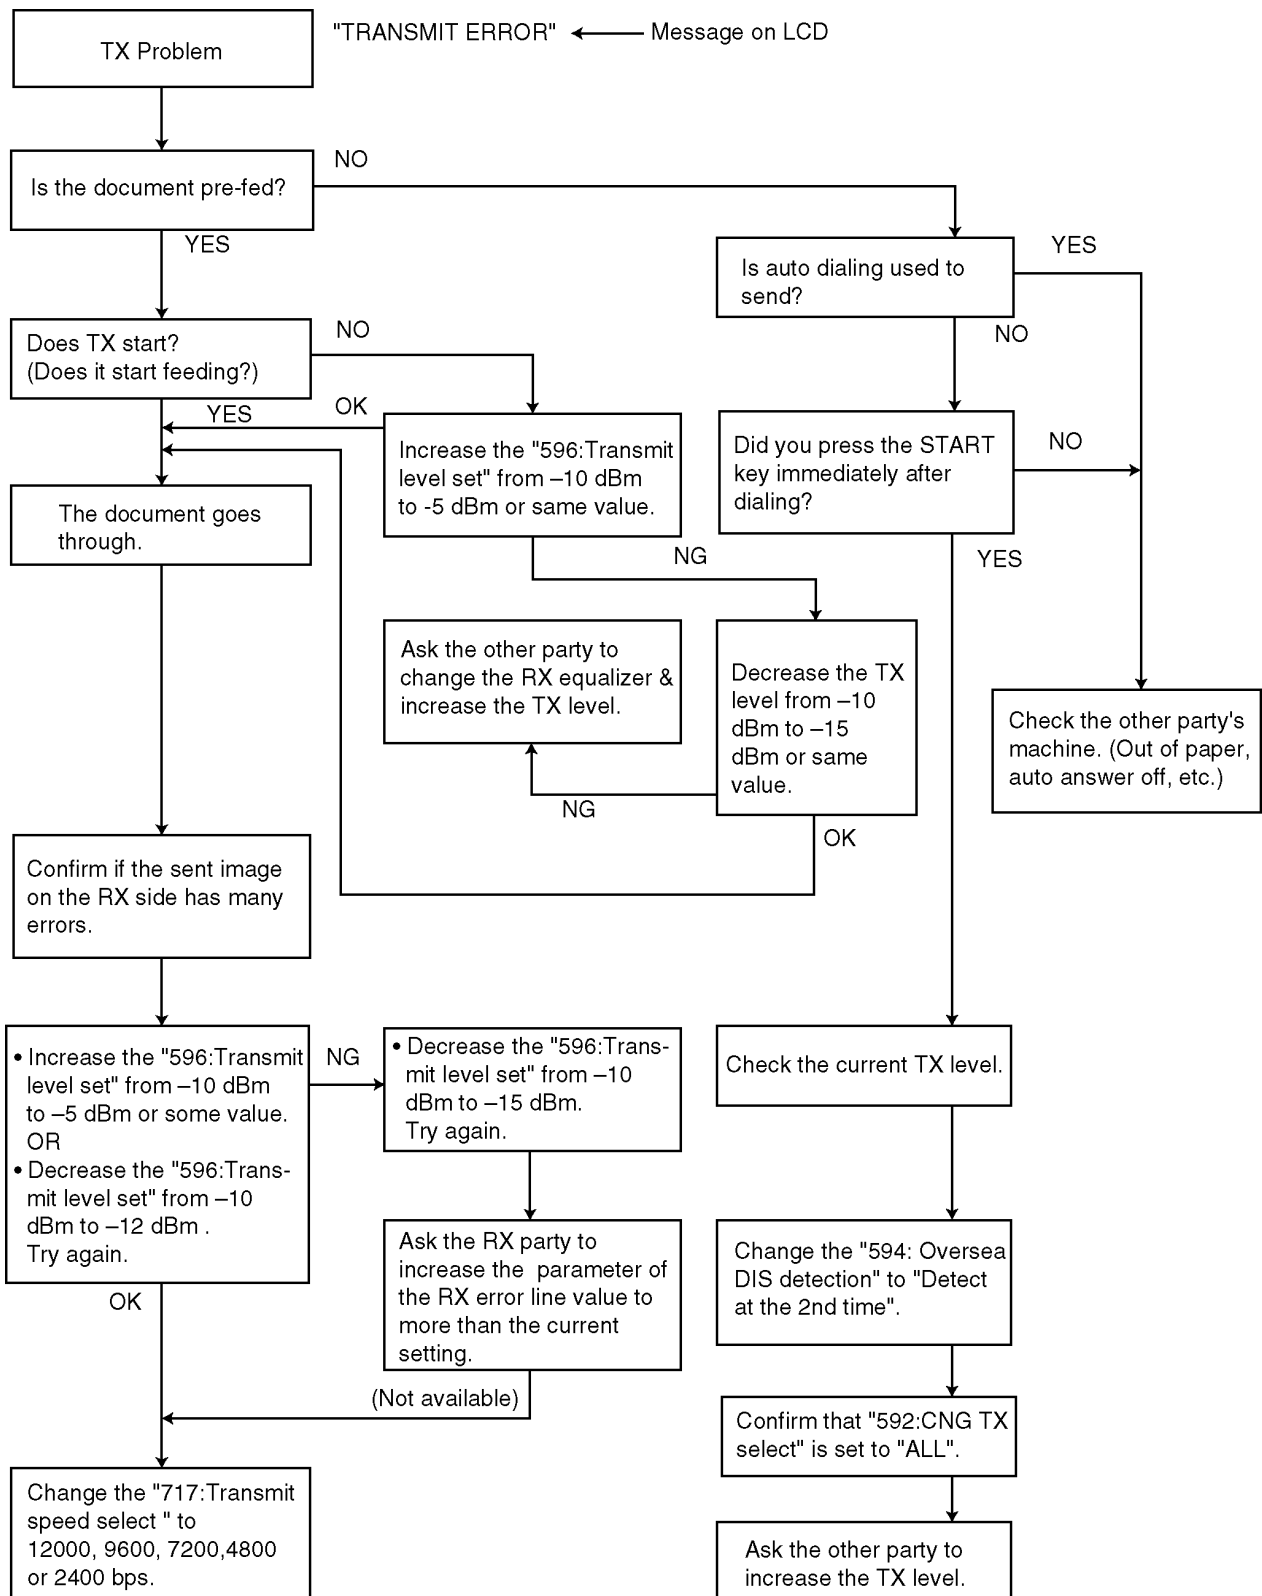

#### 6.5.10.1.1. TRANSMIT PROBLEM

**CROSS REFERENCE:**

- CLEANING THE INSIDE OF THE UNIT (P.32)
- ADF (Auto document feed) SECTION (P.102)
- OPERATION PANEL SECTION (P.131)

### 6.5.10.1.2. SOMETIME THERE IS A TRANSMIT PROBLEM

#### Note:

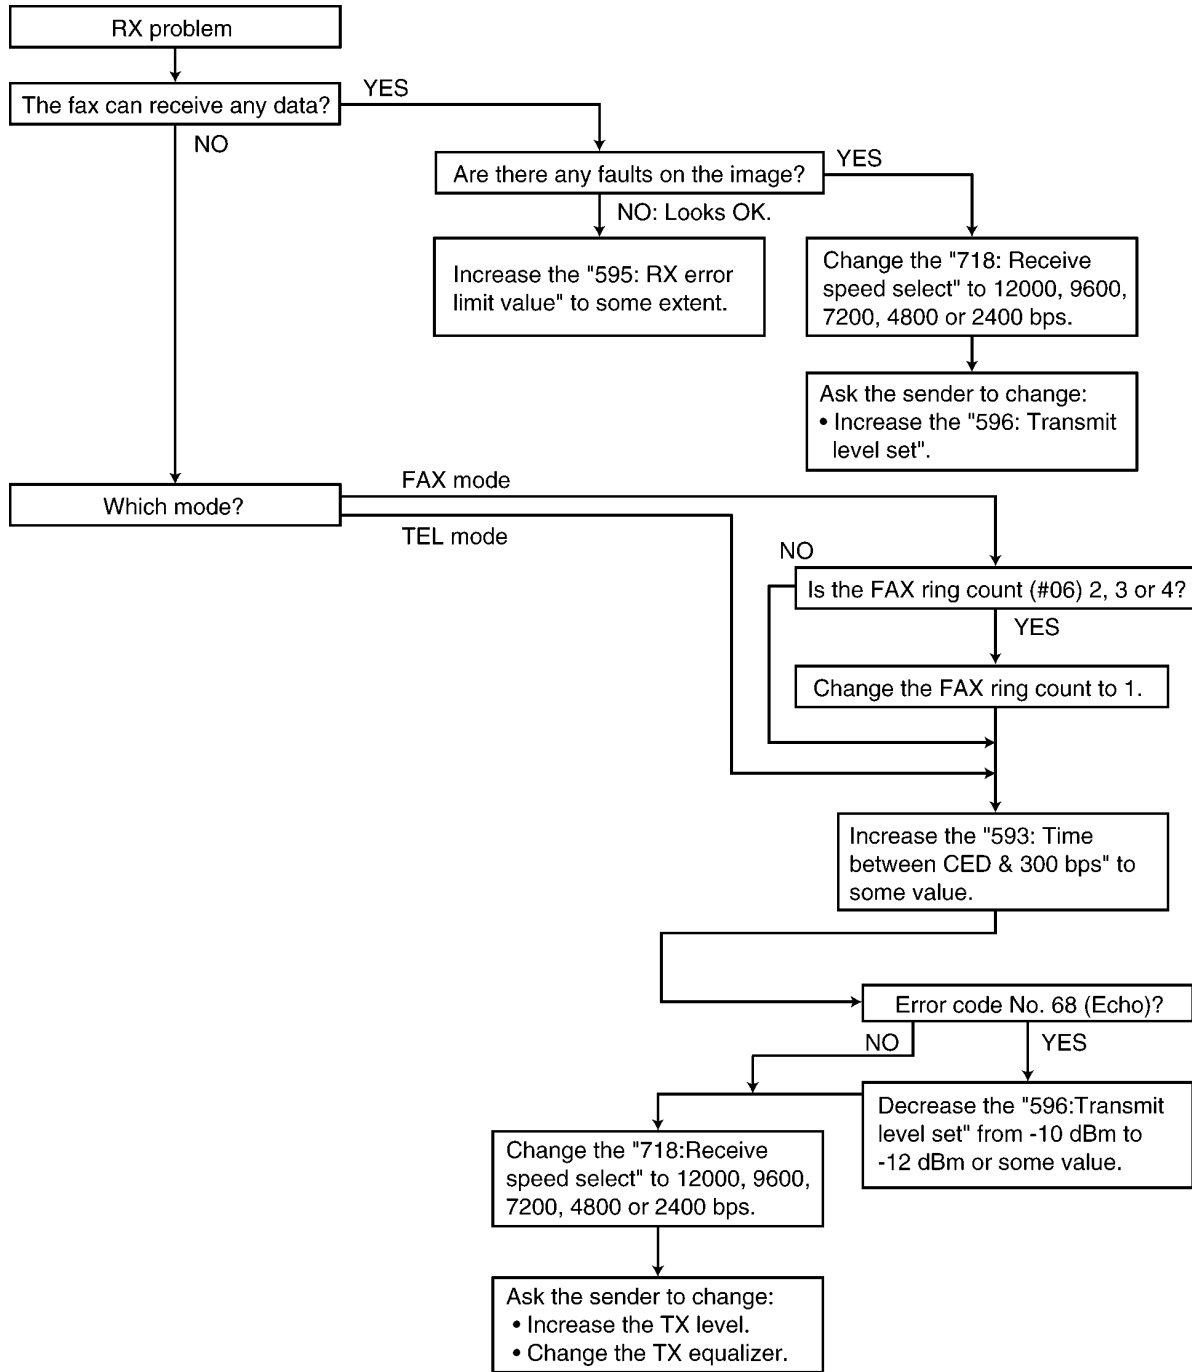

"596: Transmit level set" represents a service code. Refer to the **SERVICE FUNCTION TABLE** (P.62).

"717: Transmit speed select" represents a service code. Refer to the **SERVICE FUNCTION TABLE** (P.62).

### 6.5.10.1.3. RECEIVE PROBLEM

Confirm the following before starting troubleshooting.

- Is the recording paper installed properly? Refer to the next page.

**Note:**

"596: Transmit level set" represents a service code. Refer to the **SERVICE FUNCTION TABLE** (P.62).

"718: Receive speed select" represents a service code. Refer to the **SERVICE FUNCTION TABLE** (P.62).

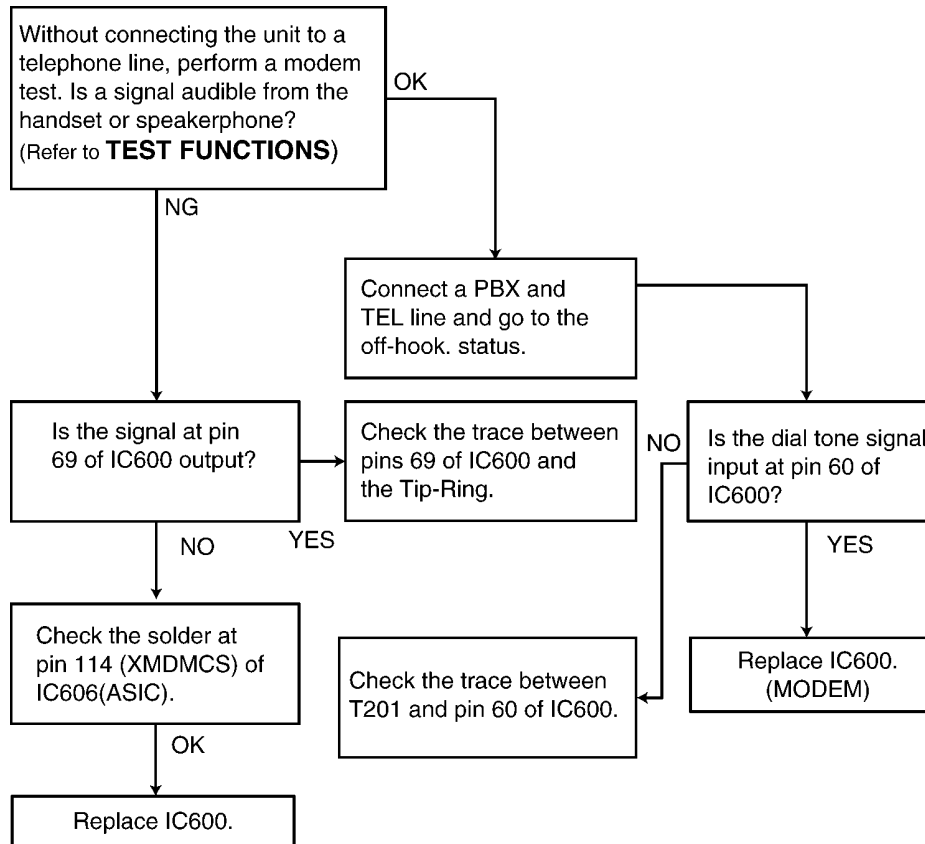

For the receiving problem, we have thought of causes other than in the software. Some causes may be when the fax changes to the memory receiving mode (for example, when out of paper). and the memory becomes full of the unprinted fax data. In this case, [MEMORY FULL] and its main cause (for example, "OUT OF PAPER") are displayed on the LCD. Accordingly, by solving the main problem, [MEMORY FULL] can be canceled and the receiving problem can be solved.

Please refer to **USER RECOVERABLE ERRORS** (P.59) for the above items.

Also, when it actually becomes a hardware deformity, please check each sensor.

#### 6.5.10.1.4. THE UNIT CAN COPY, BUT CANNOT TRANSMIT/RECEIVE

#### CROSS REFERENCE:

**TEST FUNCTIONS** (P.64)

### 6.5.11. SPECIAL SERVICE JOURNAL REPORTS

Journal 2 and Journal 3 shown below, which are special journals giving the additional detailed information about the latest 35 communications, can be printed by Service Code 881 or 882. Remote printing function for the journal reports (JOURNAL, JOURNAL 2 and JOURNAL 3) is also available for service technicians. (Refer to **PROGRAM MODE TABLE**(P.69).) The JOURNAL report only gives you basic information about a communication, but the other two journal reports provide different information on the same item (communication).

<b>JOURNAL</b>

03	MR	20msec	1200	00013	00
04	MR	20msec	0000	00000	00

**HOW TO READ JOURNAL REPORTS:**

**Example:**

- Look at **NO. 01** in the JOURNAL. If you want to know about the details about that item, see **NO. 01** in the JOURNAL 2 and the JOURNAL 3. You can get the following information.
  - \* MODE: Fax transmission
  - \* RCV. MODE: TEL
  - \* TX SPEED: 9.6 kbps
  - \* RESOLUTION: standard
  - \* ENCODE: MH
  - \* MAKER CODE: 79
- Look at **NO. 04** in the JOURNAL 2. CNG (0003) indicates that the CNG signal has been received three times since the purchase date.
 

For further details, see **JOURNAL 2** and **JOURNAL 3**.

### 6.5.11.1. JOURNAL 2

Refer to JOURNAL 2 in **PRINTOUT EXAMPLE**(P.116).

Journal 2 displays the additional detailed information about the last 35 communications.

#### Descriptions:

##### (1) RCV. MODE

Indicates which receive mode the unit was in when the unit received a fax message.

This information is also displayed when the unit transmitted a fax message.

##### (2) SPEED

Indicates the speed of the communication. If multiple pages are transmitted or received, it indicates the last page's communication speed. If there is a communication error, "?" is displayed.

##### (3) RESOLUTION

Indicates the resolution of the communication. If multiple pages are transmitted or received, it indicates the last page's resolution. If there is a communication error, "?" is displayed.

##### (4) RCV-TRIG. (CNT.)

Indicates the trigger that causes the unit to switch to the fax receive mode. The available options are listed in JOURNAL 2 in **PRINTOUT EXAMPLE**(P.116). The values in parentheses indicate how many times the trigger has been used. (For example, "0003" means three times.)

No.	Display	Function
1	FAX MODE	Means the unit received a fax message in the FAX mode.
2	MAN RCV	Means the unit received a fax message by manual operation.
3	RMT DTMF	Means the unit detected DTMF (Remote Fax activation code) entered remotely.
4	PAL DTMF	Means the unit detected DTMF (Remote Fax activation code) entered by a parallel connected telephone.
5	TURN-ON	Means the unit started to receive after 10 rings. (Remote Turn On: Service Code #573)

##### (5) ERROR→MEMORY

Indicates the reason why the unit received a fax message in memory.

If you look at No.11 in the JOURNAL 2 in **PRINTOUT EXAMPLE**(P.116), it shows the fax message was received in memory due to "PAPER OUT" error.

#### **NO RESPONSE DISAPPEARED ON JOURNAL**

The "**NO RESPONSE DISAPPEARED ON JOURNAL**" displays the information about the last 10 communications terminated by "No Response". (Some of the communications terminated by "No Response" were not displayed in the JOURNAL.)

When a fax transmission cannot be performed because the other party's unit is set to the TEL mode, "No response" will be printed.

### 6.5.11.2. JOURNAL 3

Refer to JOURNAL 3 in PRINTOUT EXAMPLE(P.116).

**Description**

**(6) ENCODE**

Compression Code: MH/MR/MMR

**(7) MSLT**

MSLT means Minimum Scan Line Time. Used only at the factory.

**(8) EQM**

EQM means Eye Quality Monitor. Used only at the factory.

**(9) ERROR LINE (RX)**

When an error occurs while receiving a fax, this shows the number of error lines.

**(10) MAKER CODE**

This shows a 2 digit code of the other party's fax machine brand.

0E: "KX" model

00: Unknown

79: "UF" model

19: "Xerox" model

### 6.5.11.4. HOW TO OUTPUT THE JOURNAL REPORT

1. Press the MENU button.
2. Press “#”, then “8” and “3”.
3. Press the START/COPY/SET button.
4. The report prints out.

**JOURNAL** Jan. 20 2000 01:19PM

68	COMMUNICATION ERROR	RCV	No response at the other party after MCF or CFR is transmitted.	13
70	ERROR-NOT YOUR UNIT	RCV	DCN is received after CFR transmission.	13
72	COMMUNICATION ERROR	RCV	Carrier is cut when the image signal is received.	16
75	MEMORY FULL	RCV	The document was not received due to memory full.	
79	CANCELED	SND	The multi-station transmission was rejected by the user.	
FF	COMMUNICATION ERROR	SND & RCV	Modem error. For the DCN, DCN, etc. abbreviations, refer to <b>MODEM SECTION (P.210)</b> .	12

SND=TRANSMISSION / RCV=RECEPTION

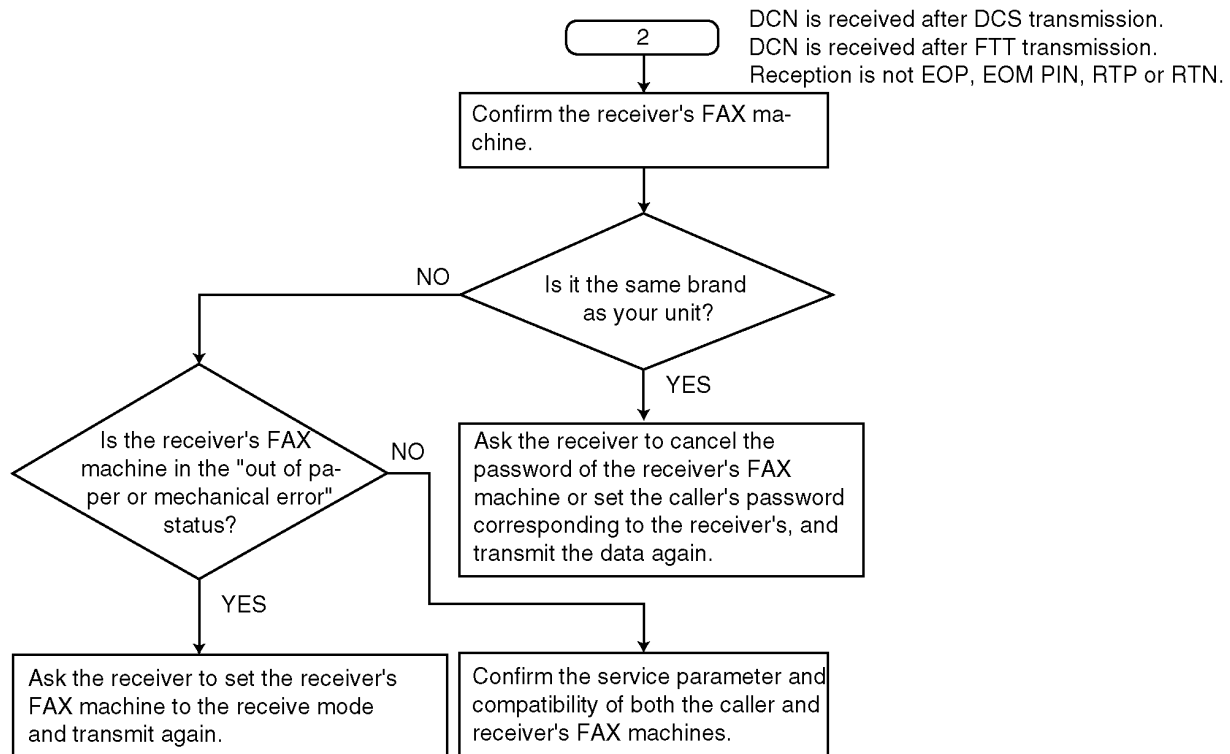

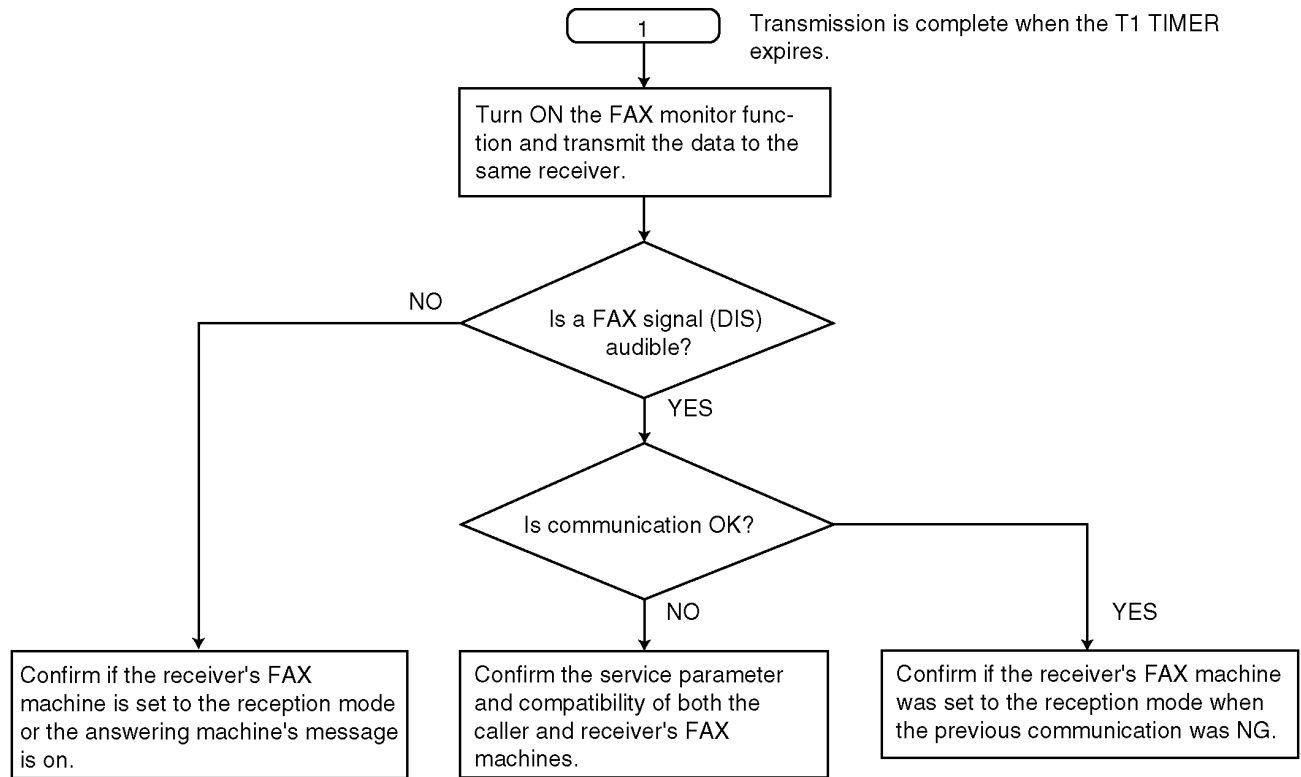

Most fax communication problems can be resolved by the following steps.

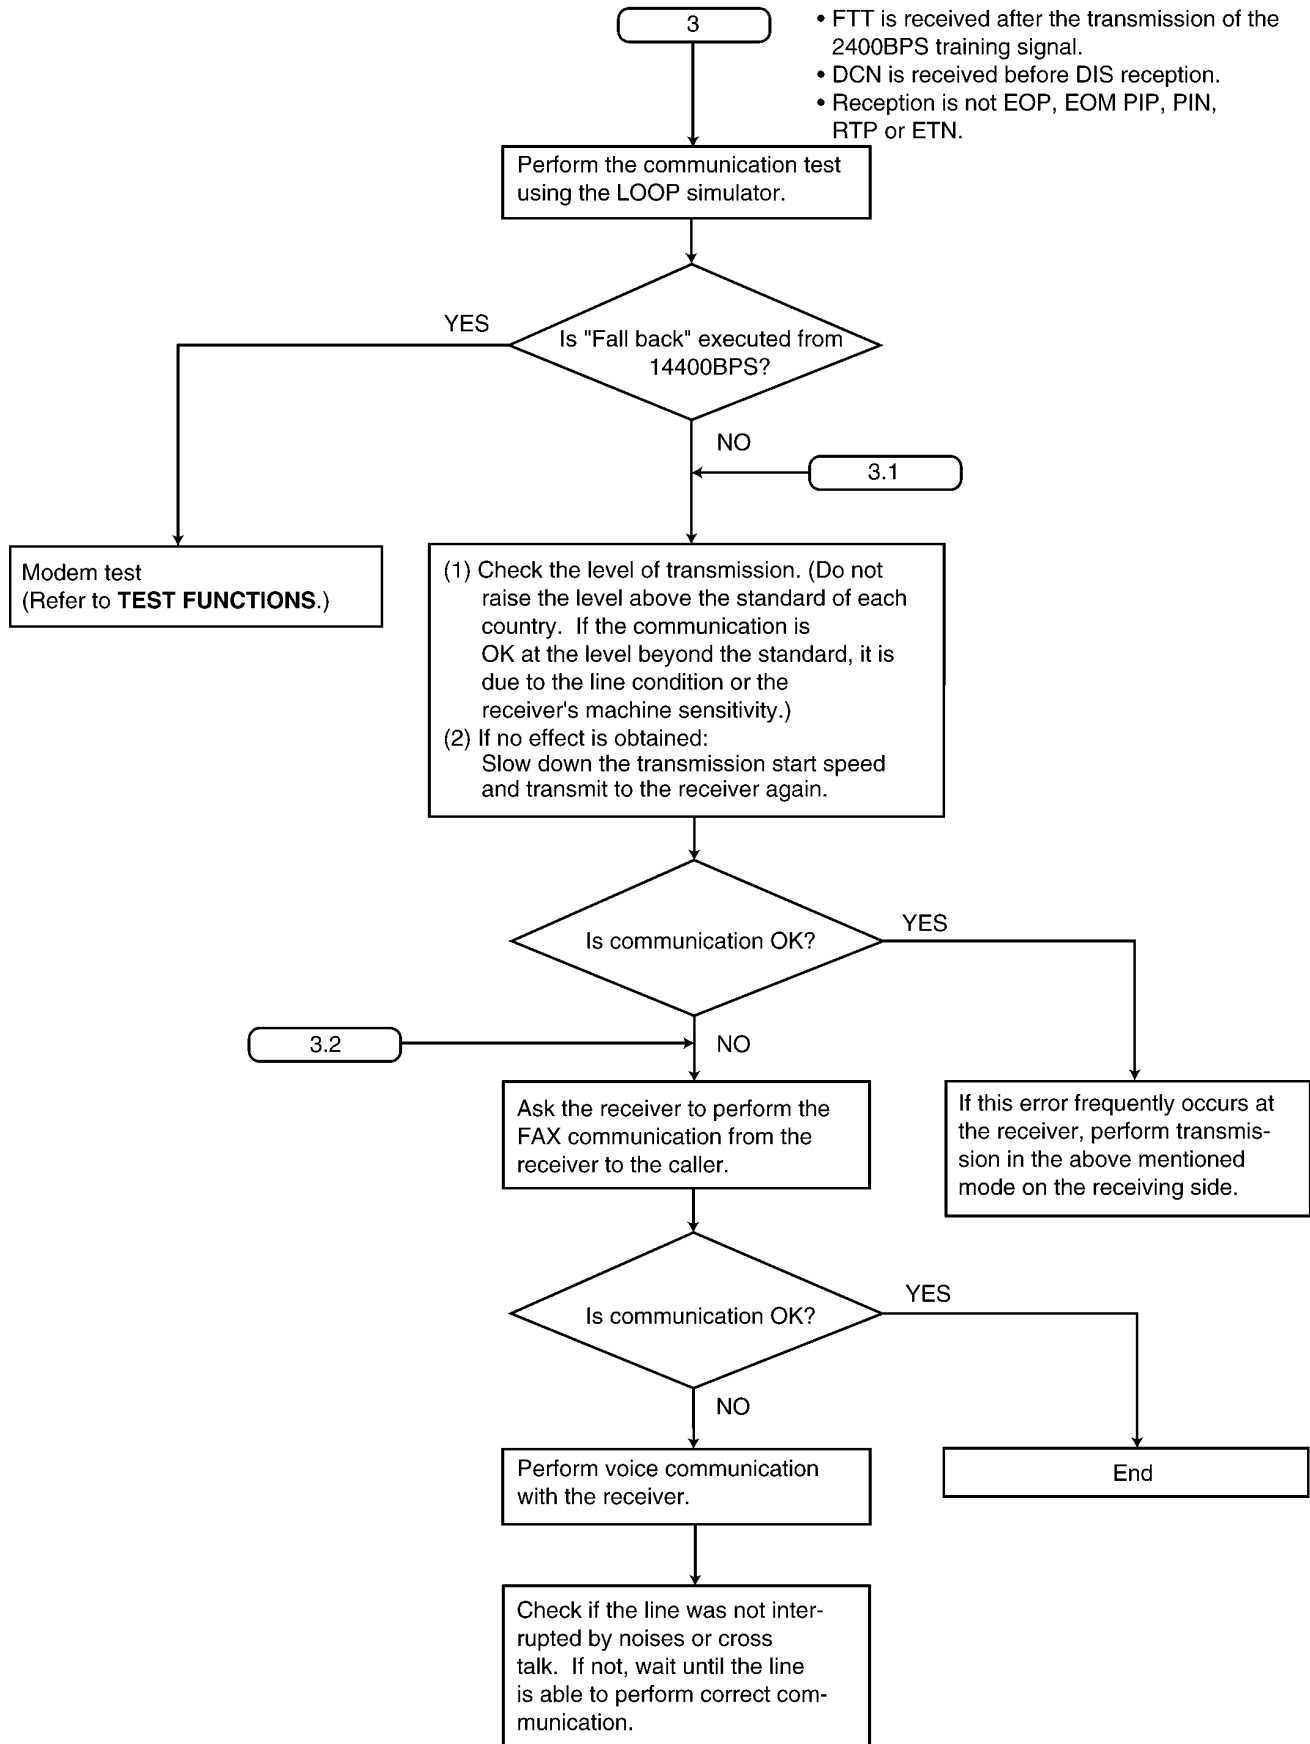

1. Change the transmit level. (Service code: 596, refer to **SERVICE FUNCTION TABLE(P.62)**.)
2. Change the TX speed/RX speed. (Service code: 717/718, refer to **SERVICE FUNCTION TABLE (P.62)**.)

**Note\*:**

If the problem remains, see the following "Countermeasure" flow chart.

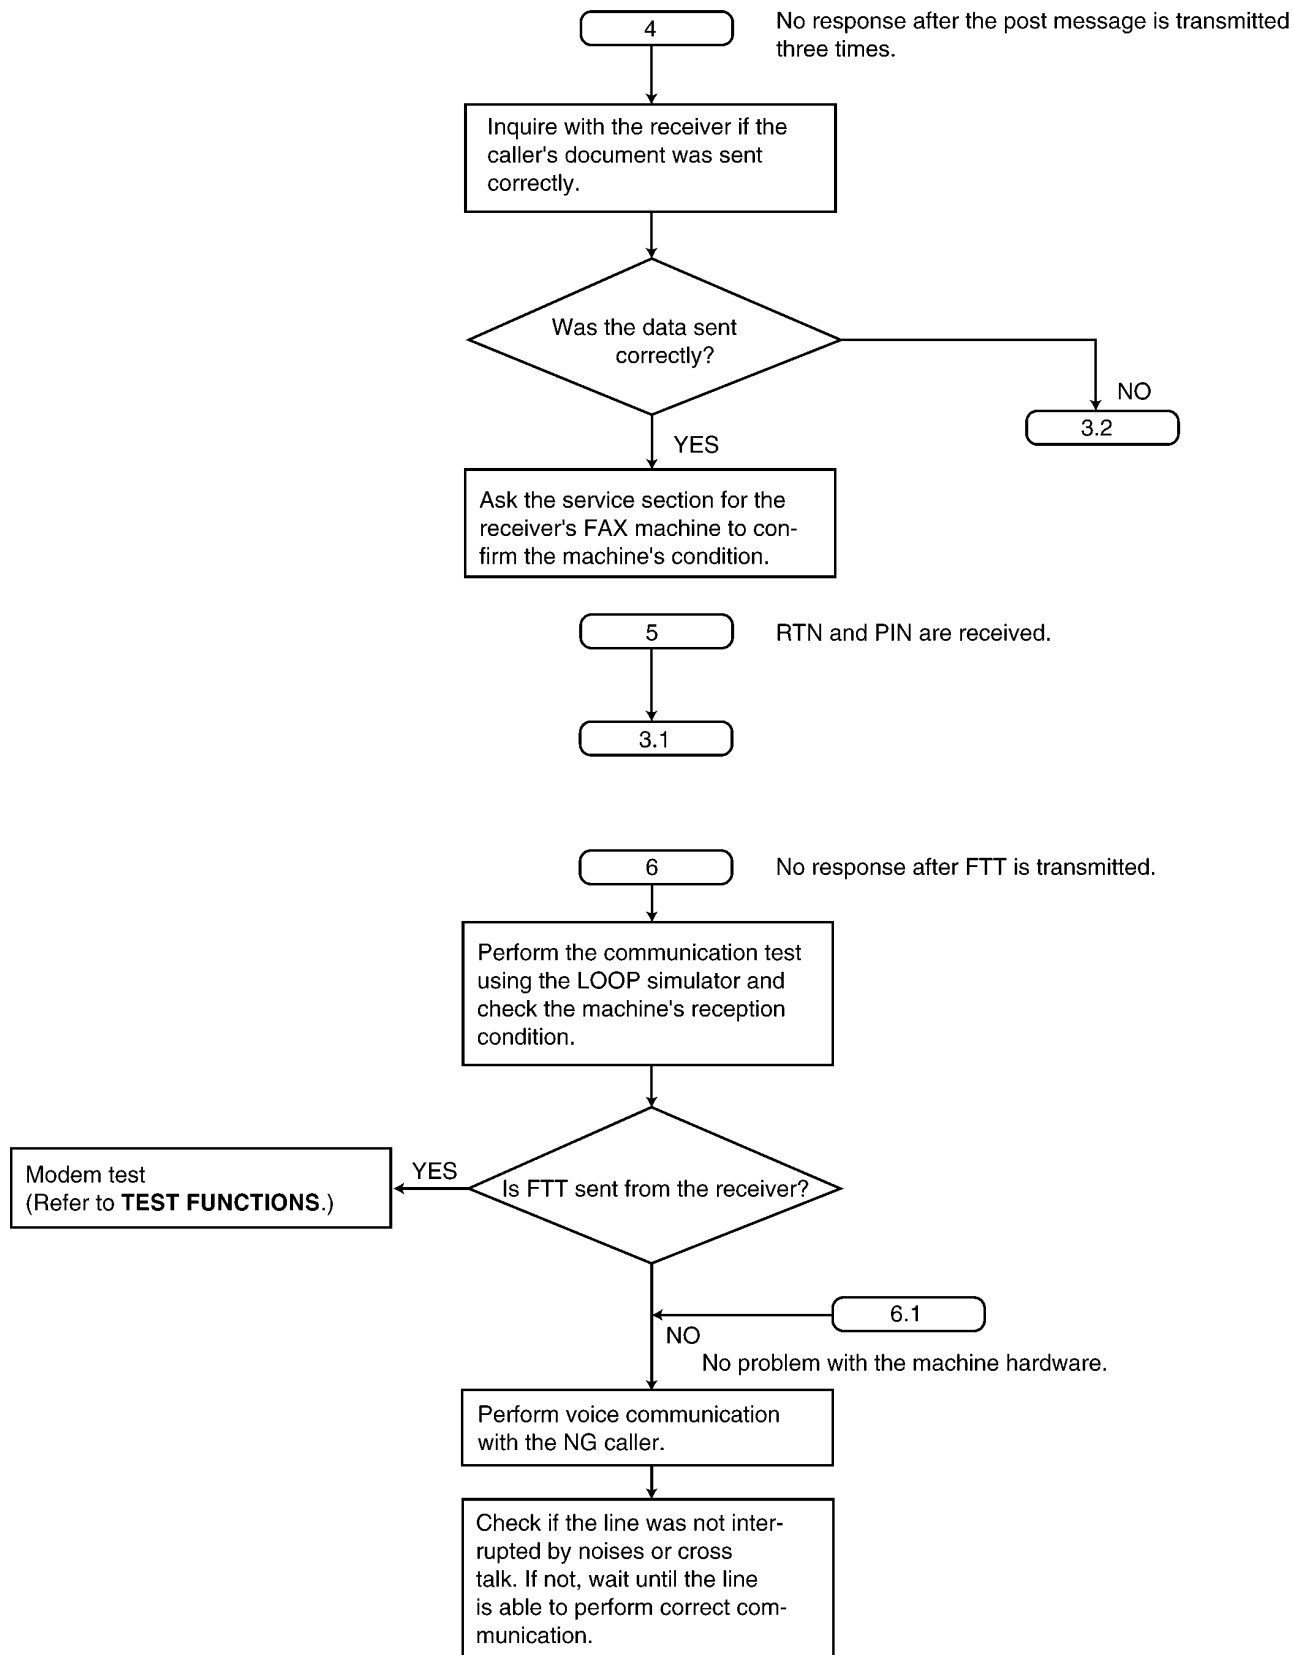

**Countermeasure**

## 6.5.12. INITIALIZING ERROR

After the power is turned on, the ASIC (IC606) initializes and checks each IC.

The ROM (IC607), SDRAM (IC604), and MODEM (IC600) are checked.

If initialization fails for the ICs, the system will not boot up.

In this case, please find the cause as follows.

### CROSS REFERENCE:

NG EXAMPLE (P.209)

POWER SUPPLY BOARD SECTION (P.144)

### 6.5.13. ANALOG BOARD SECTION

This chapter provides the testing procedures required for the analog parts. A signal route to be tested is determined depending upon purposes. For example, the handset TX route begins at the handset microphone and the signal is output to the telephone line. The signal mainly flowing on this route is analog. You can trace the signal with an oscilloscope. The signal flow on each route is shown in the Check Sheet here. If you find a specific problem in the unit, for example if you cannot communicate with the H/S, trace that signal route locally with the following Check Sheet and locate the faulty point.

#### 6.5.13.1. CHECK SHEET

(SYMPTOM) CHECK ITEMS	Signal ROUTE	
	IN	OUT
MONITOR	TEL LINE-CN203(3)-F200-L239-FLT200-D210-Q211-R278-C253-T201-C232-R236-L220-IC204(2-1)-L <sub>1</sub> PF-R202-C200-IC207(23-34)-C324-CN201(11)-{CN600(18)-IC611(1,2,4,5,12,13,14,15-3)-CN600(20)}-CN201(9)-R343-C325-IC207(32-35)-R251-C246-IC206(4-5,8) [ CN200(1) ] SPEAKER [ CN200(2) ]

**Note:** { } : Inside the digital board

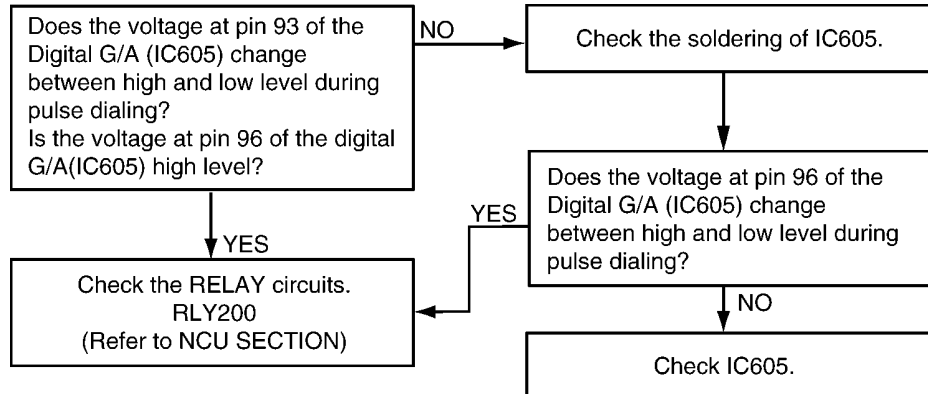

### 6.5.13.2. DEFECTIVE ITS (Integrated Telephone System) SECTION

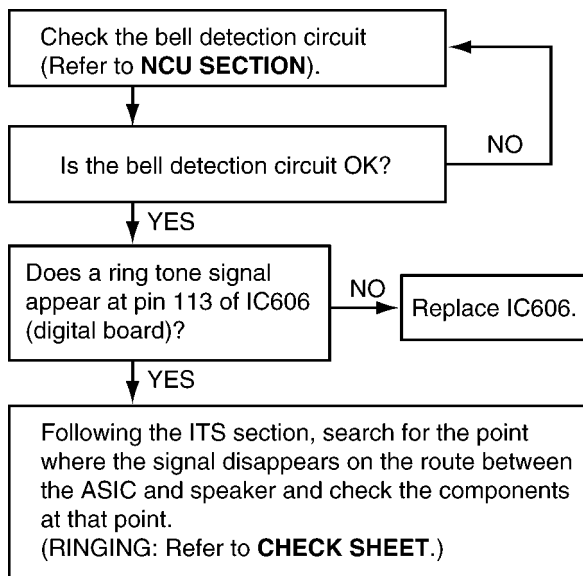

#### 1. No handset and speakerphone transmission / reception

Perform a signal test in the **ITS or the NCU section** and locate a defective point (where the signal disappears) on each route between the handset microphone and telephone line (sending), or between the telephone line and the handset speaker (receiving), or between the microphone and the telephone line (sending), or between the telephone line and the speaker (receiving). Check the components at that point. **CHECK SHEET**(P.128) is useful for this investigation.

#### 2. No pulse dialing

#### 3. No ring tone (or No bell)

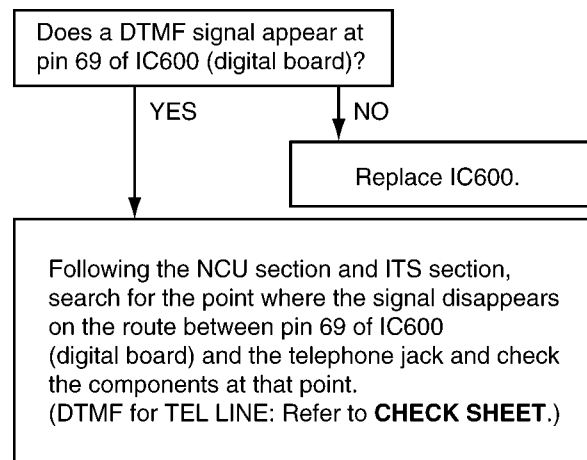

**CROSS REFERENCE:**

**CHECK SHEET** (P.128)

**NCU SECTION** (P.161)

#### 4. No tone dialing

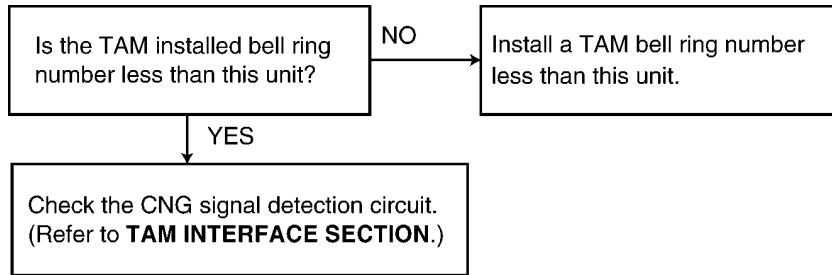

**CROSS REFERENCE:**

**CHECK SHEET** (P.128)

### 6.5.13.3. DETECTIVE TAM INTERFACE SECTION

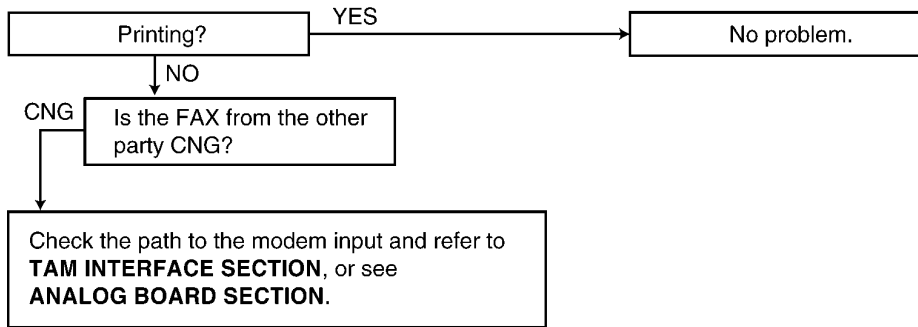

1. The FAX turns on, but does not arrive through TAM.

**CROSS REFERENCE:**

**TAM INTERFACE SECTION (P.164)**

2. A FAX is received, but won't switch from TAM to FAX.

**CROSS REFERENCE:**

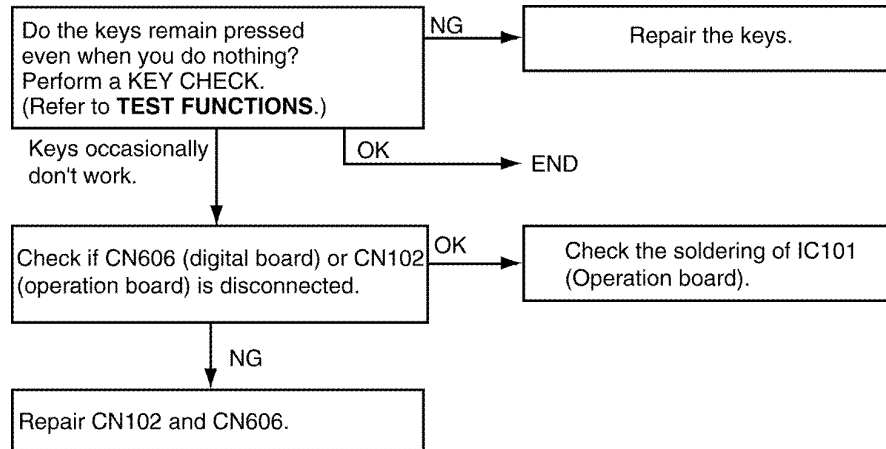

**ANALOG BOARD SECTION (P.128)**

**TAM INTERFACE SECTION (P.164)**

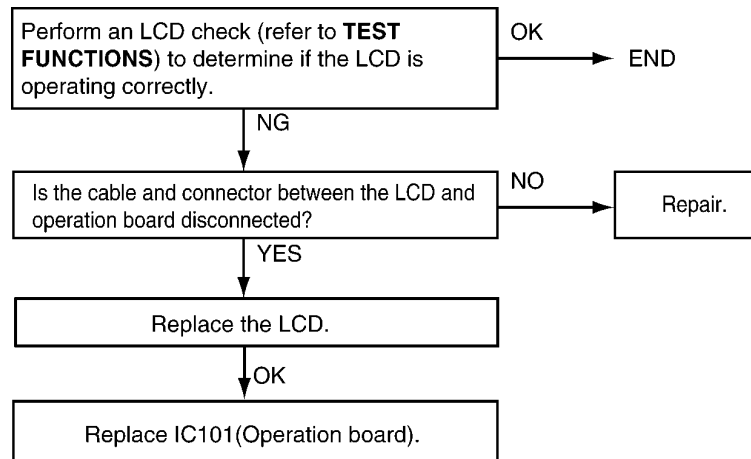

### 6.5.13.4. OPERATION PANEL SECTION

Refer to **TEST FUNCTIONS** (P.64).

#### 1. NO KEY OPERATION

#### 2. NO LCD INDICATION

#### CROSS REFERENCE:

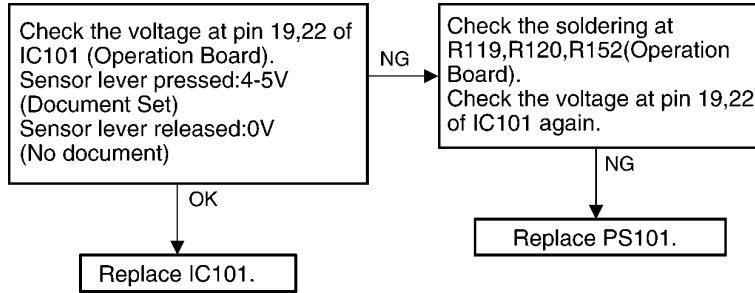

**TEST FUNCTIONS** (P.64)

### 6.5.13.5. SENSOR SECTION

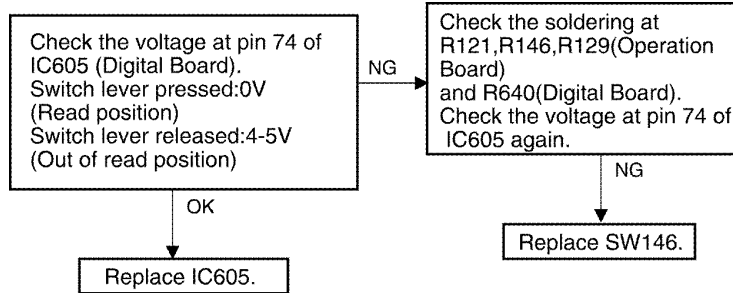

Refer to SENSORS AND SWITCHES for the circuit description.

Perform a SENSOR CHECK to determine if the sensor is operating correctly.

#### 1. Check the document sensor ..... “CHECK DOCUMENT”

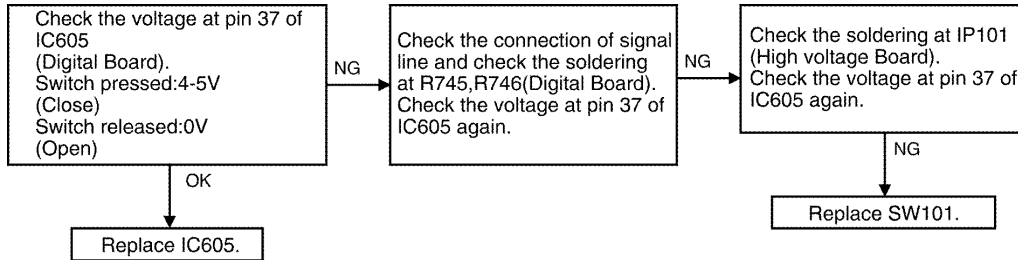

#### 2. Check the paper feed sensor..... “REMOVE DOCUMENT”

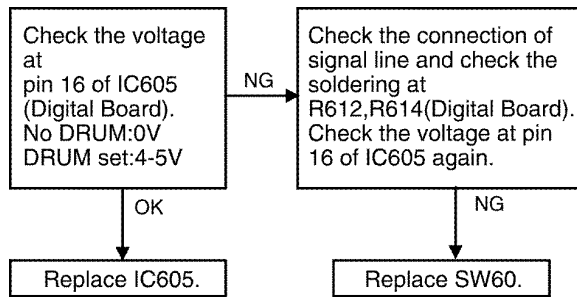

#### 3. Check the hook switch

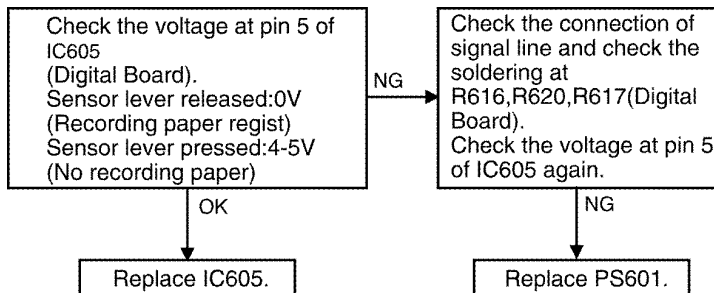

#### 4. Check the cover open switch..... “COVER OPEN”

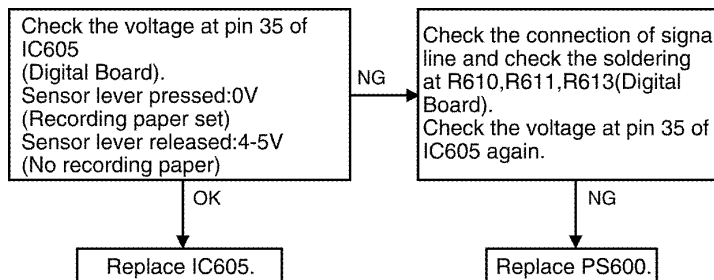

### 5. Check the DRUM sensor..... “CHECK DRUM”

### 6. Check the regist sensor..... “FAILED PICKUP”

### 7. Check the paper sensor..... “OUT OF PAPER”

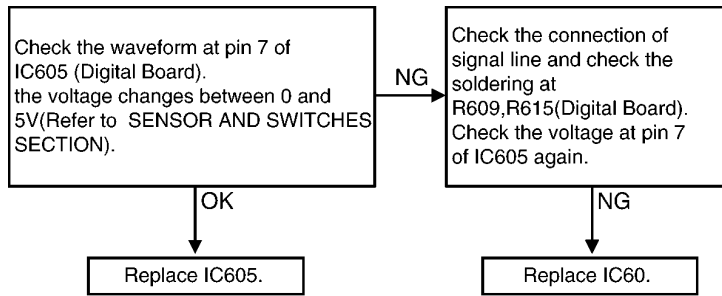

### 8. Check the exit switch..... “PAPER JAMMED”

**9. Check the toner sensor..... “TONER LOW”, “CHANGE DRUM”**

As for the following check, remove the drum from the main body, set it again and close the cover, then perform that check during initializing operation. Refer to **SENSORS AND SWITCHES SECTION (P.175)**.

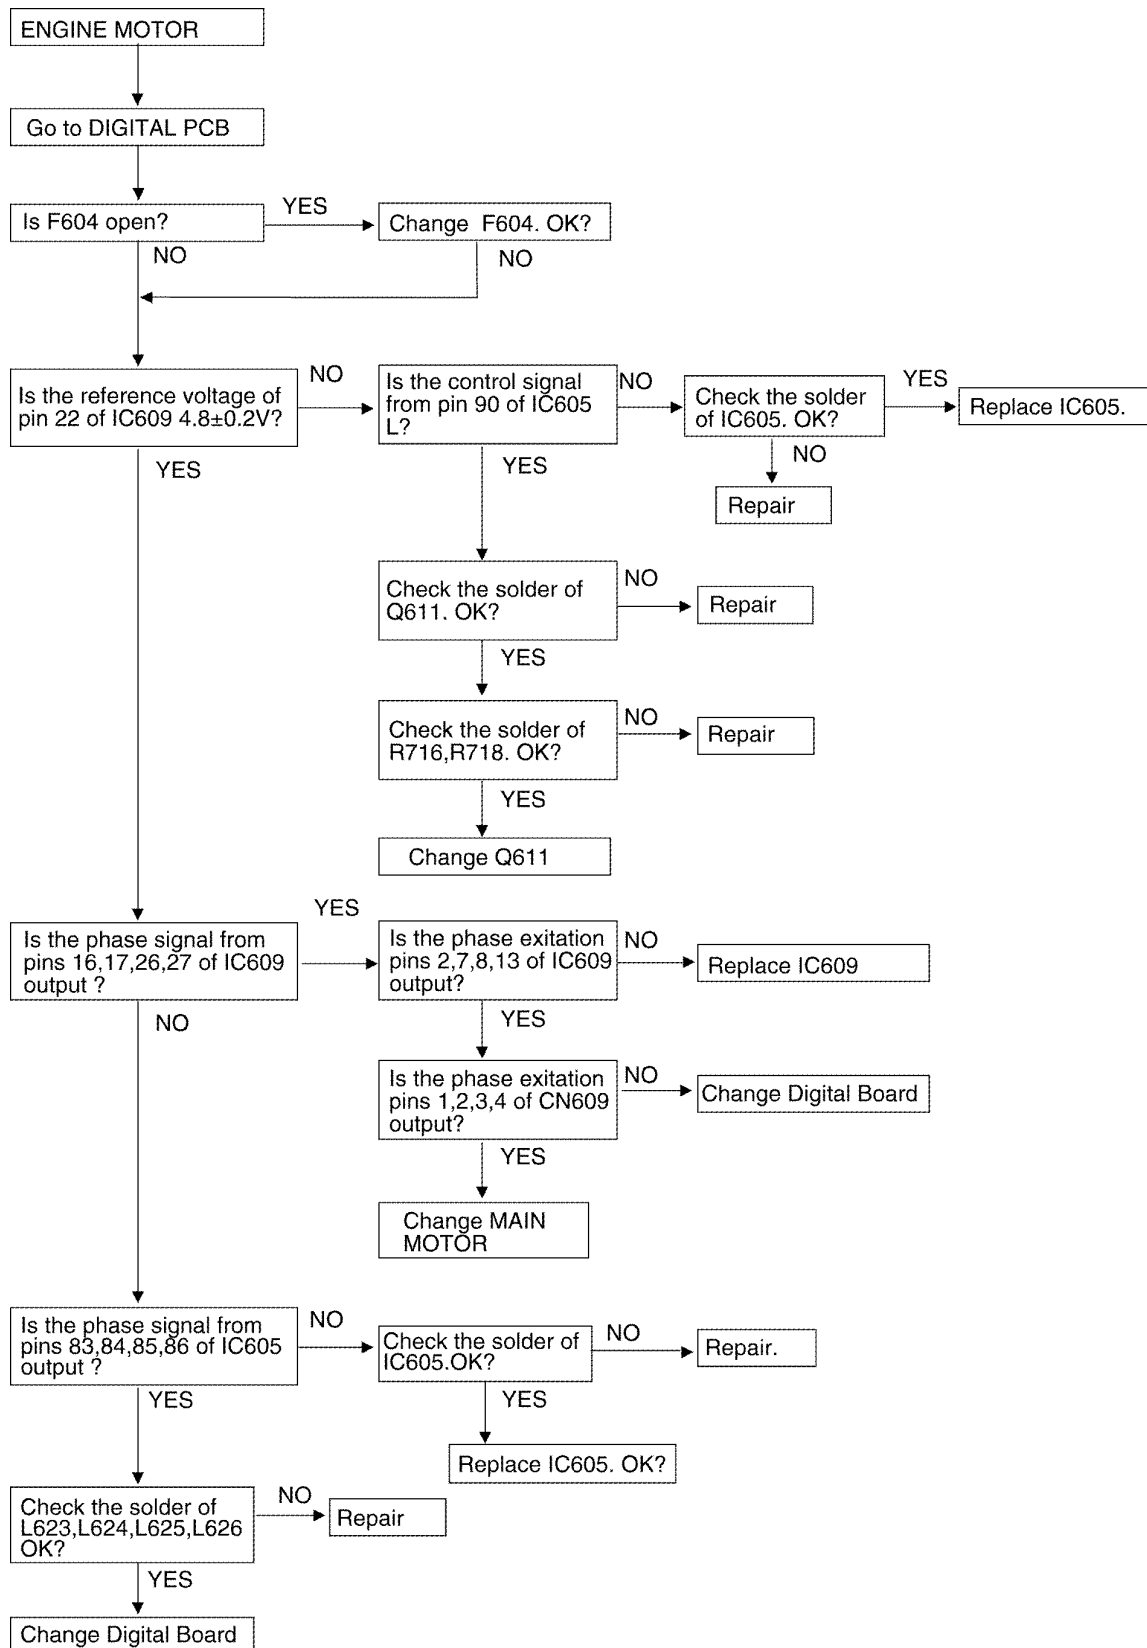

**CROSS REFERENCE:**

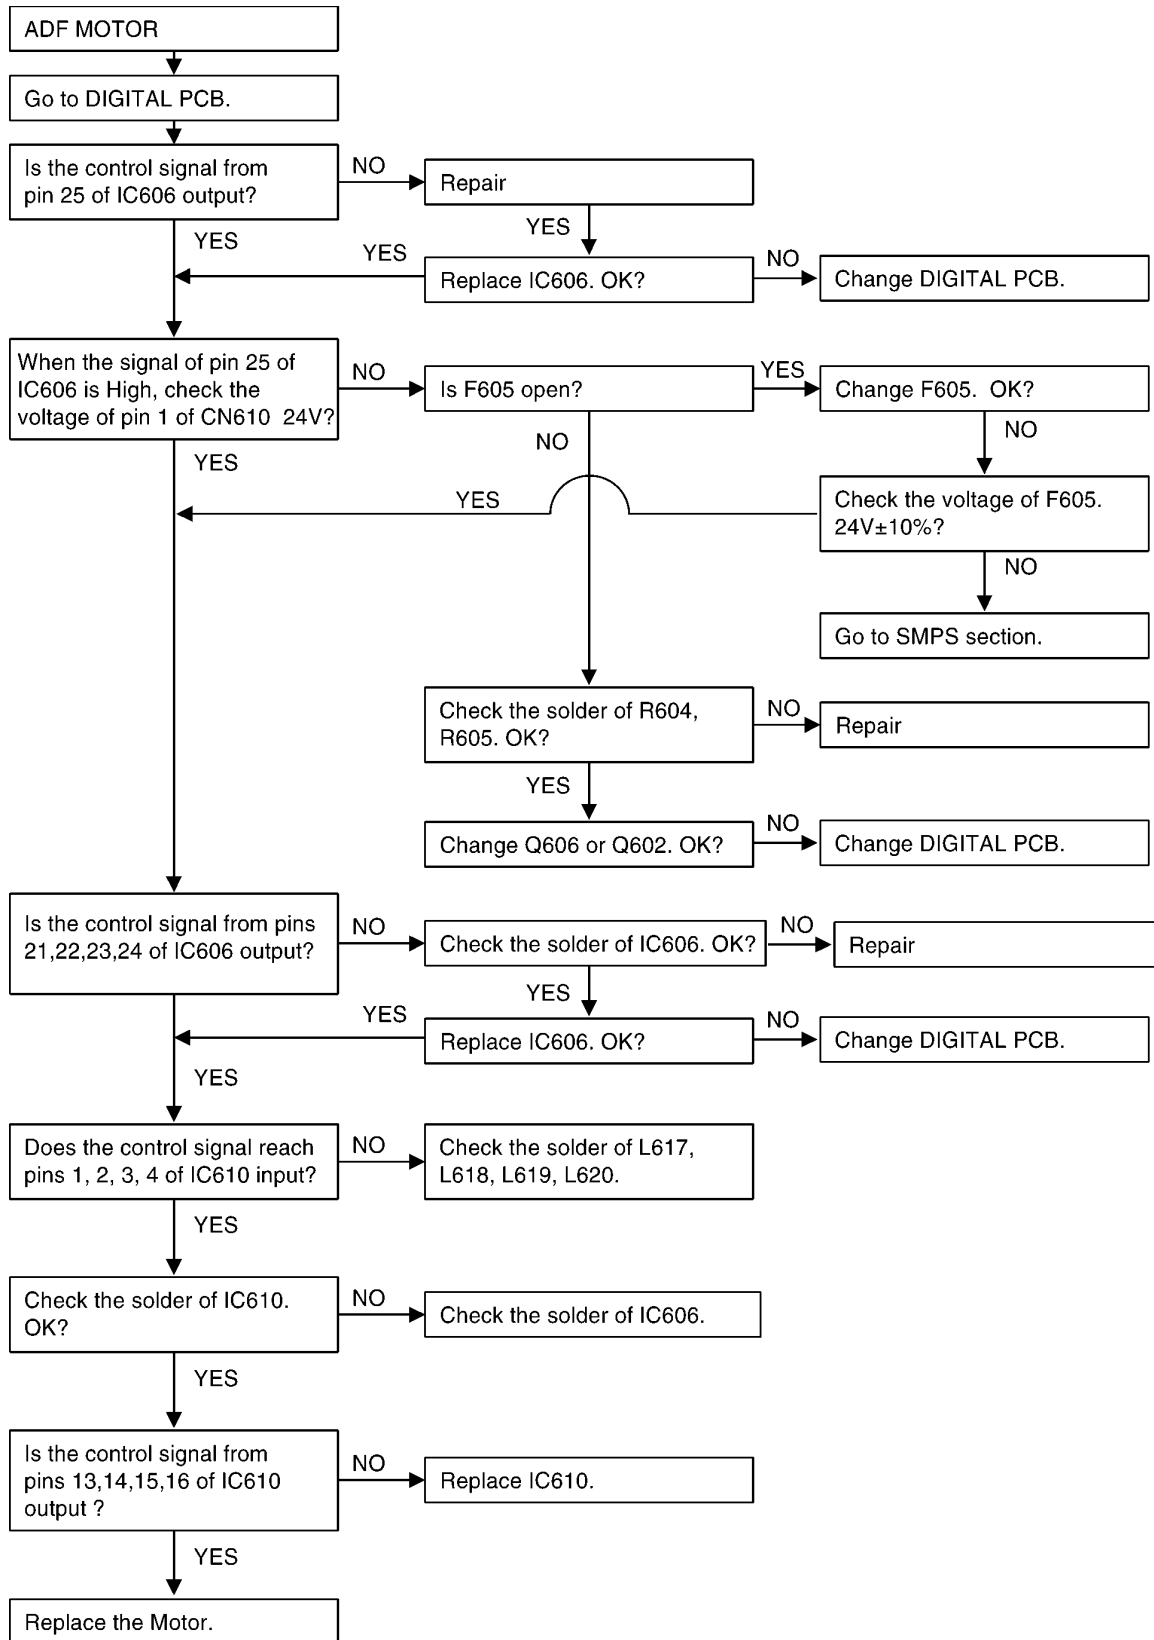

**SENSORS AND SWITCHES SECTION (P.175)**

## 6.5.13.6. MOTOR SECTION

### 6.5.13.6.1. ENGINE MOTOR

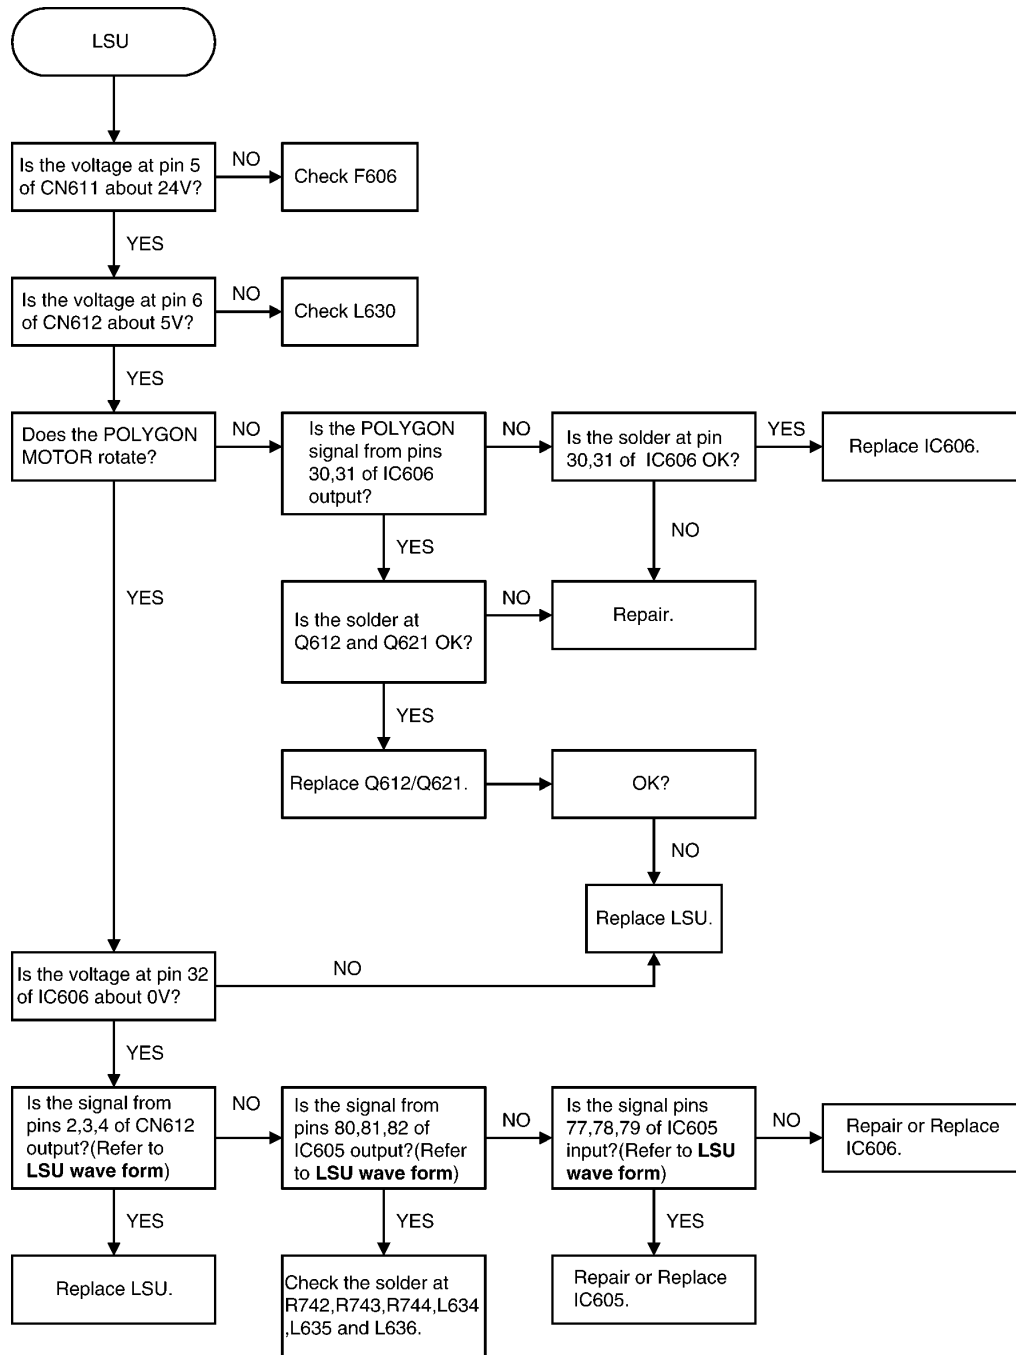

### 6.5.13.6.2. ADF MOTOR

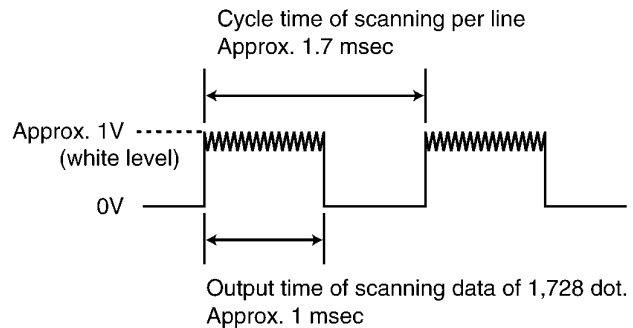

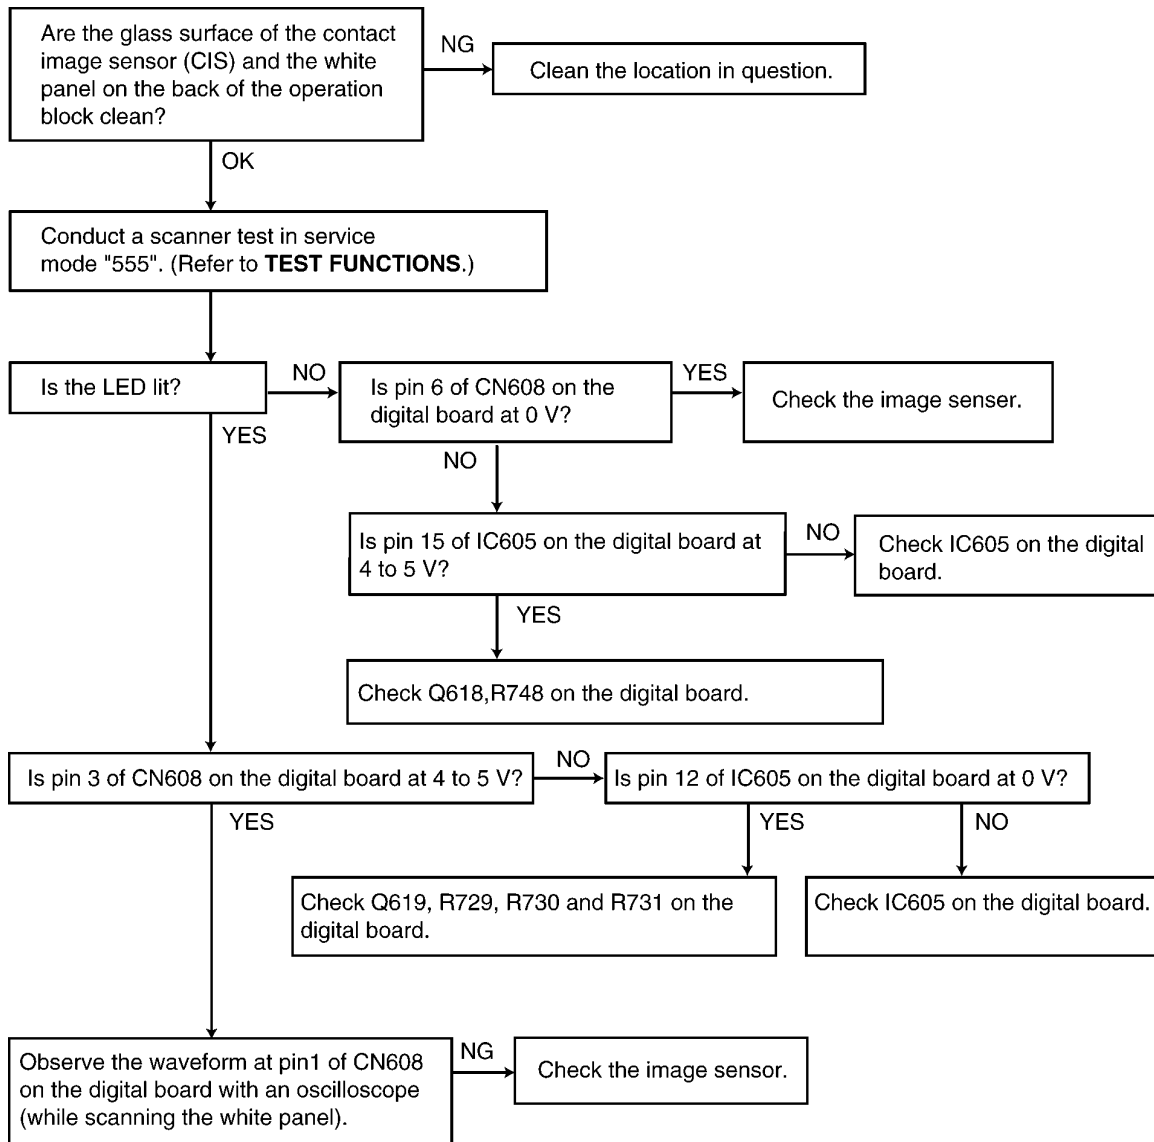

### 6.5.13.7. LSU SECTION

**CROSS REFERENCE:**

**LSU (Laser Scanning Unit) SECTION (P.173)**

### 6.5.14. CIS (Contact Image Sensor) SECTION

**CROSS REFERENCE:**  
**TEST FUNCTIONS (P.64)**

## 6.5.15. HIGH VOLTAGE VALUE CHECK POINT

### Measurement Procedure

1. Open the TOP cover.
2. Remove the developing unit, if it is equipped.
3. Open the TOP cover, and turn ON the TOP cover SW.  
(Push the TOP cover SW with a sharp-tipped insulator or insert folded paper, etc. to the slit.)
4. The unit enters the service mode when the TOP cover is open, then push \*628.  
(Don't push the START button.)
5. Touch the output terminals under test with the high voltage probes.
6. Push the START button.  
(This causes to output high voltage from each terminal, so be careful not to touch them. The sound "Pi Pi Pi" warns that the high voltage is outputting.)
7. When the measurement is finished, push the STOP button.  
(The high voltage output is stopped.)
8. Repeat the items No. 5~7 until the measurement is finished.
9. When the measurement is finished, turn OFF the TOP cover SW.

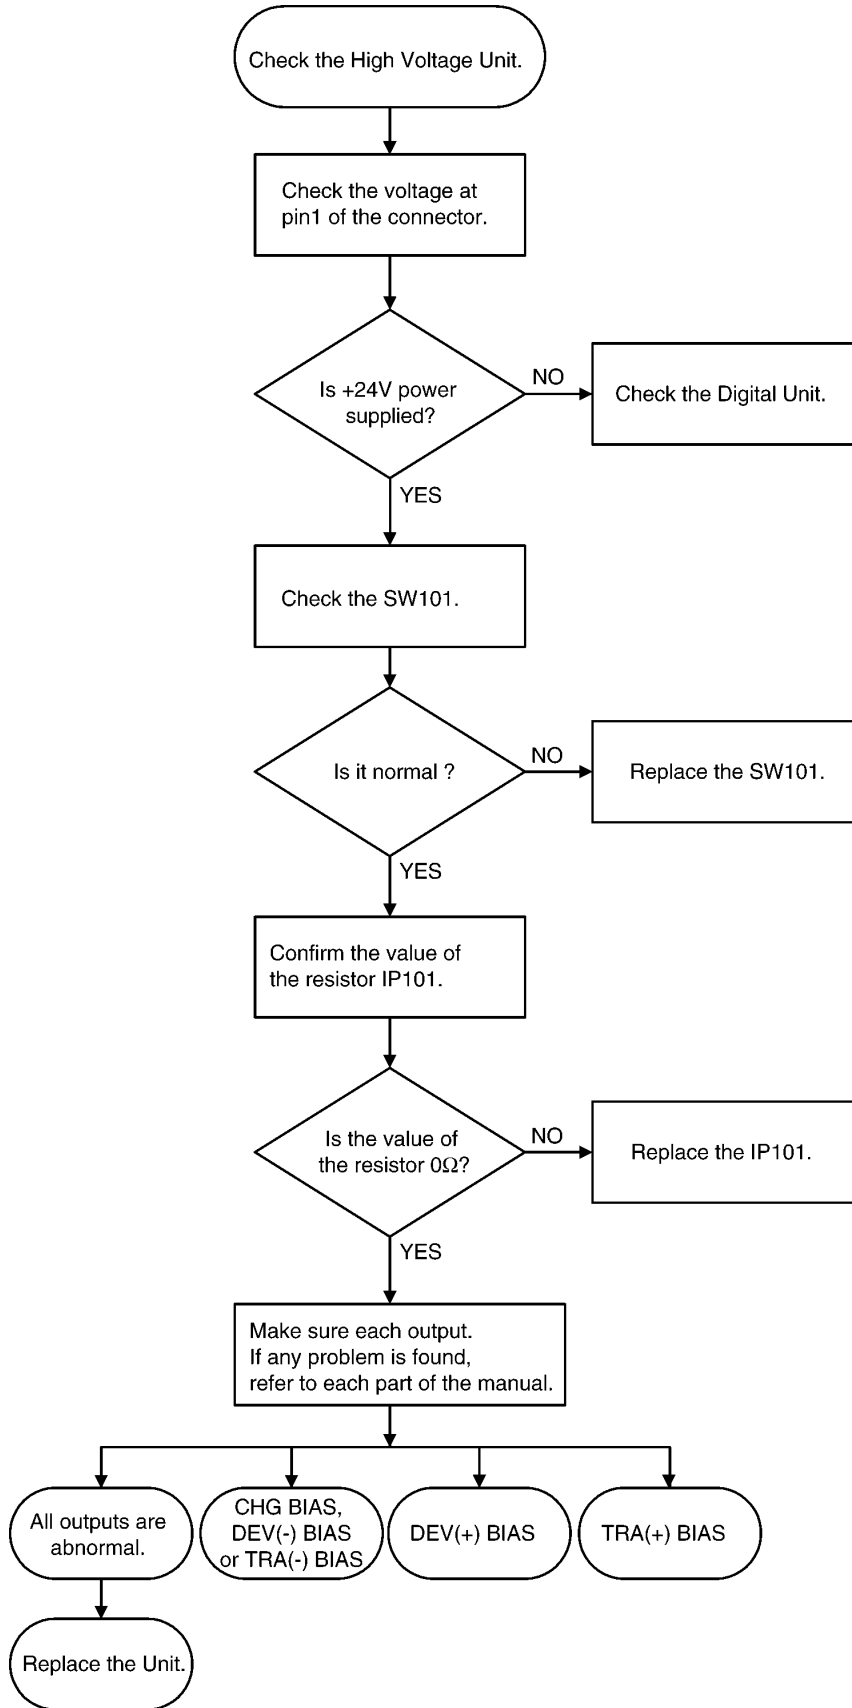

### Output voltage of each terminal

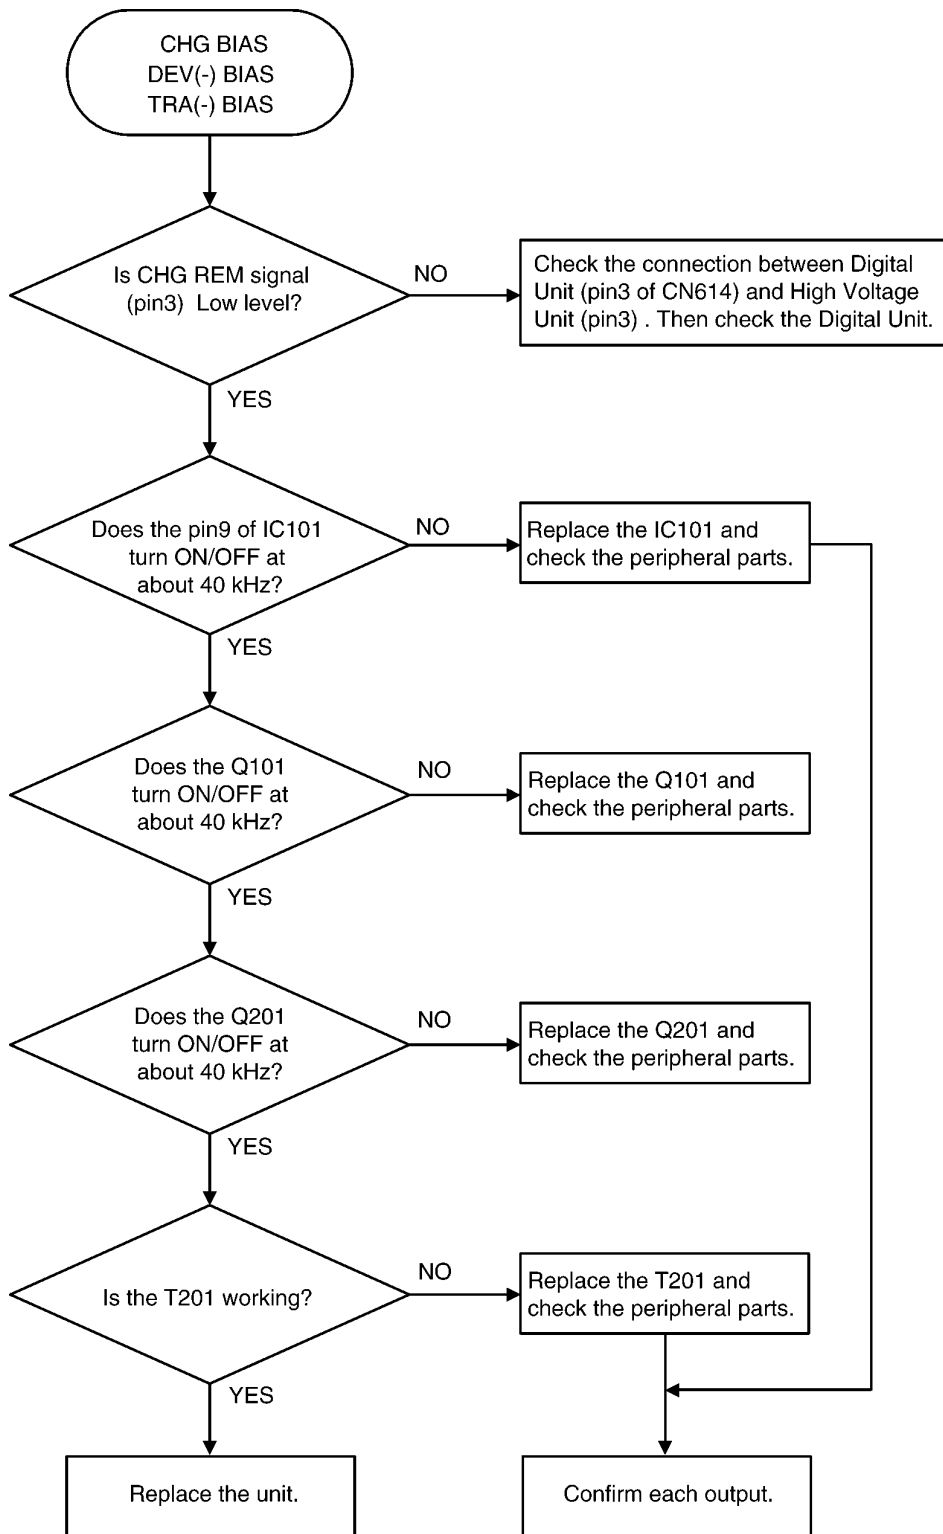

No.	BIAS Name	Specified output voltage	The range of specified output voltage
①	CHG (Charge)	-1000V	-1000V± 30V
②	DEV (Developing)	-200V	-200V± 15V
③	TRA (Transfer)	-1000V	-1000V± 100V

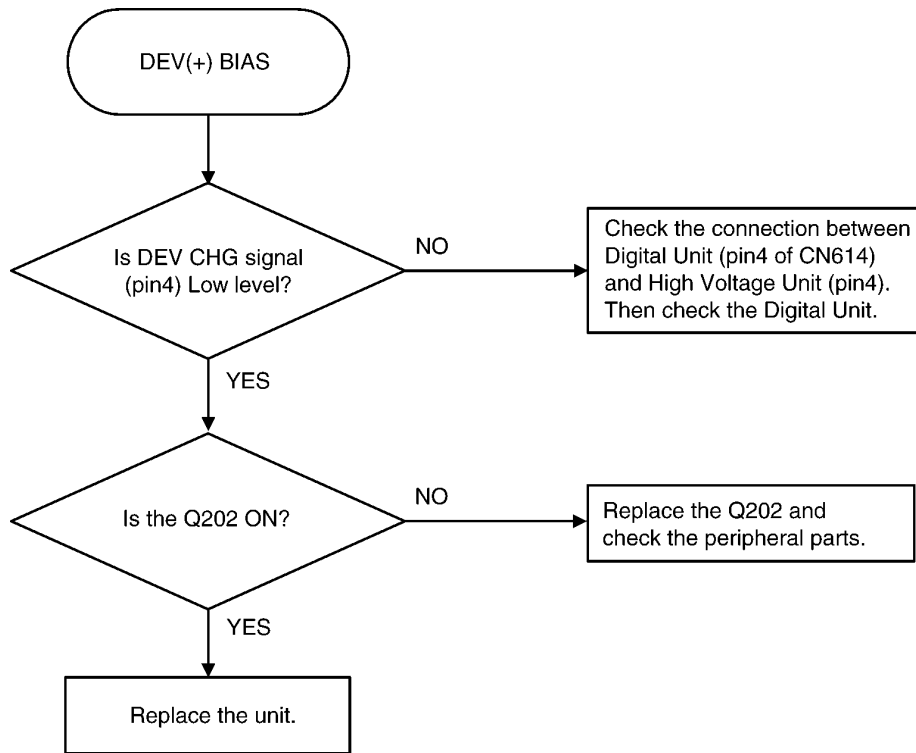

\* As for the High Voltage test equipment, FLUKE 85 (MULTI METER)+ HIOKI (HV PROBE 9014) or the equivalent should be used.

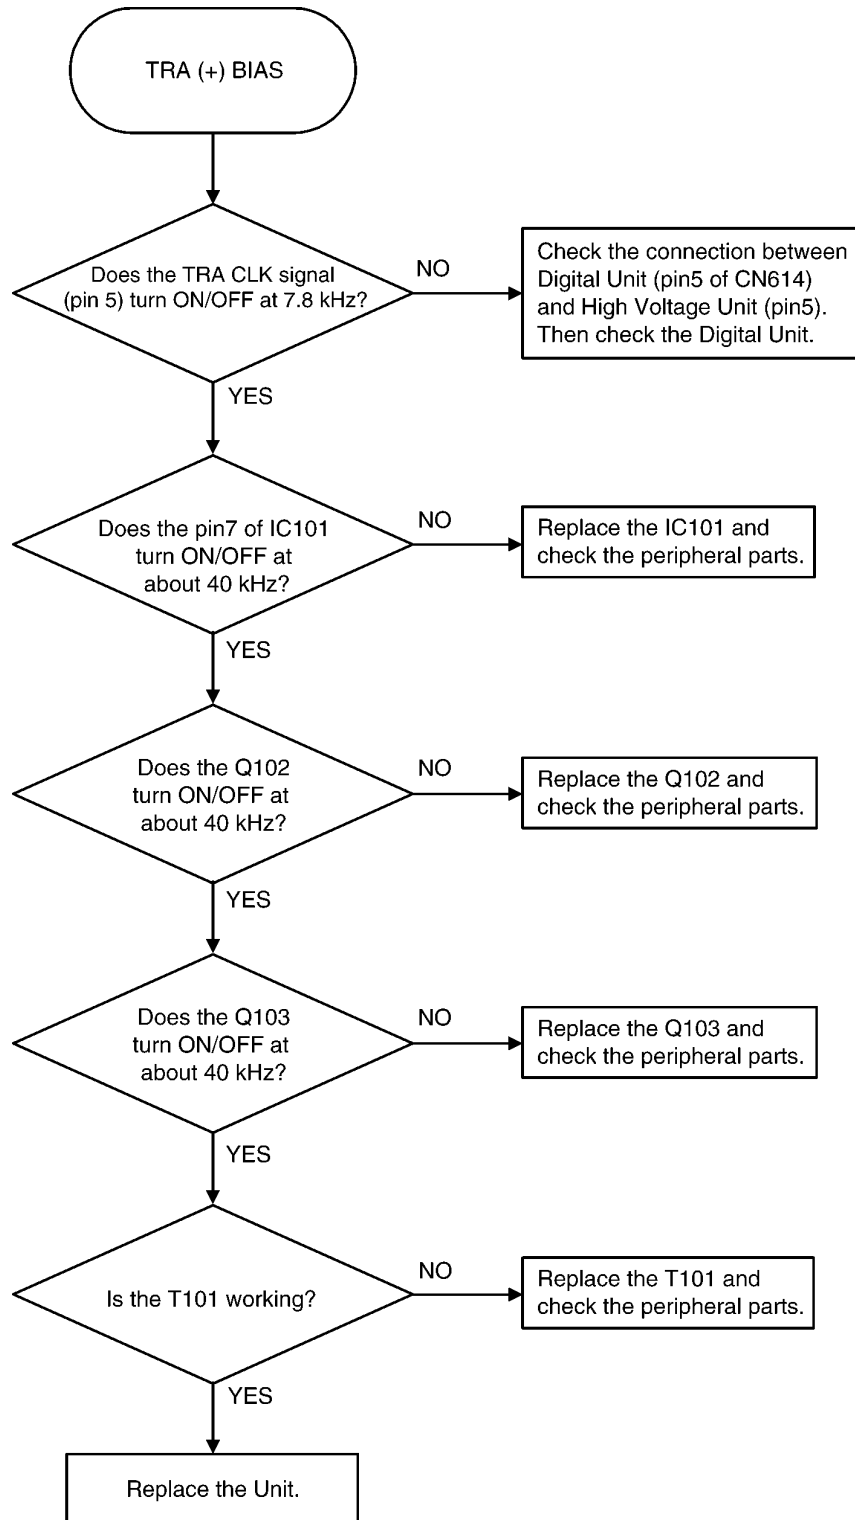

### 6.5.16. HIGH VOLTAGE SECTION

\* This Adjustment should be done with a single High Voltage Board.

\* As for the High Voltage Probe, HV PROBE 9014 of HIOKI electric co. or the equivalent should be used.

\* As for the tester, FLUKE 85 III multi meter or the equivalent should be used.

\* Be careful not to touch the terminals during adjustment because the high voltage is used.

## 6.5.17. POWER SUPPLY BOARD SECTION

### 6.5.17.1. KEY COMPONENTS FOR TROUBLESHOOTING

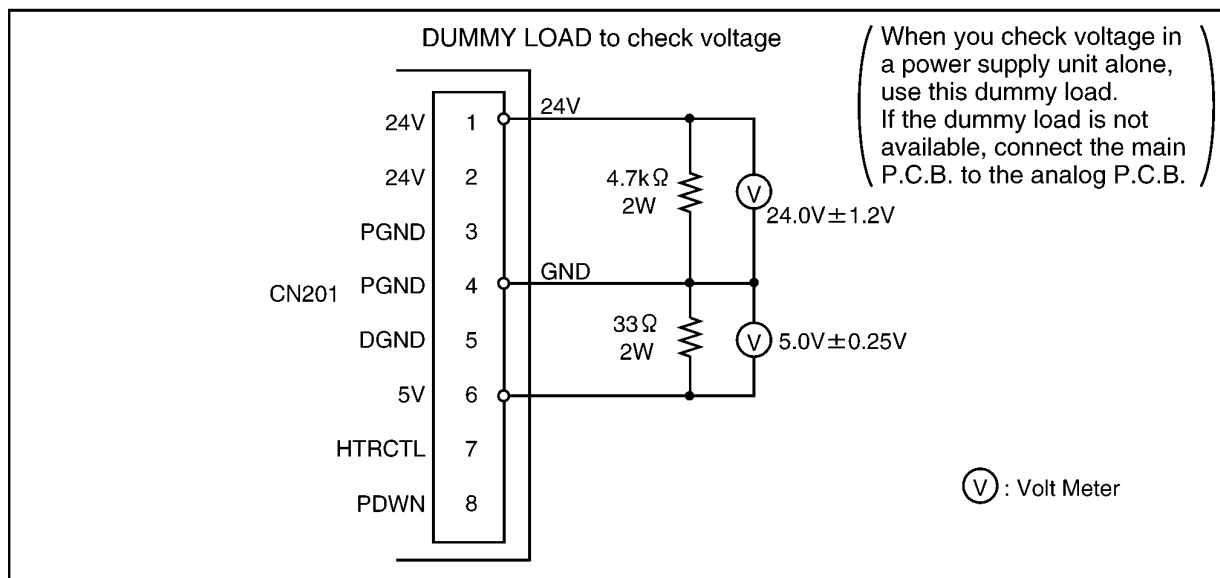

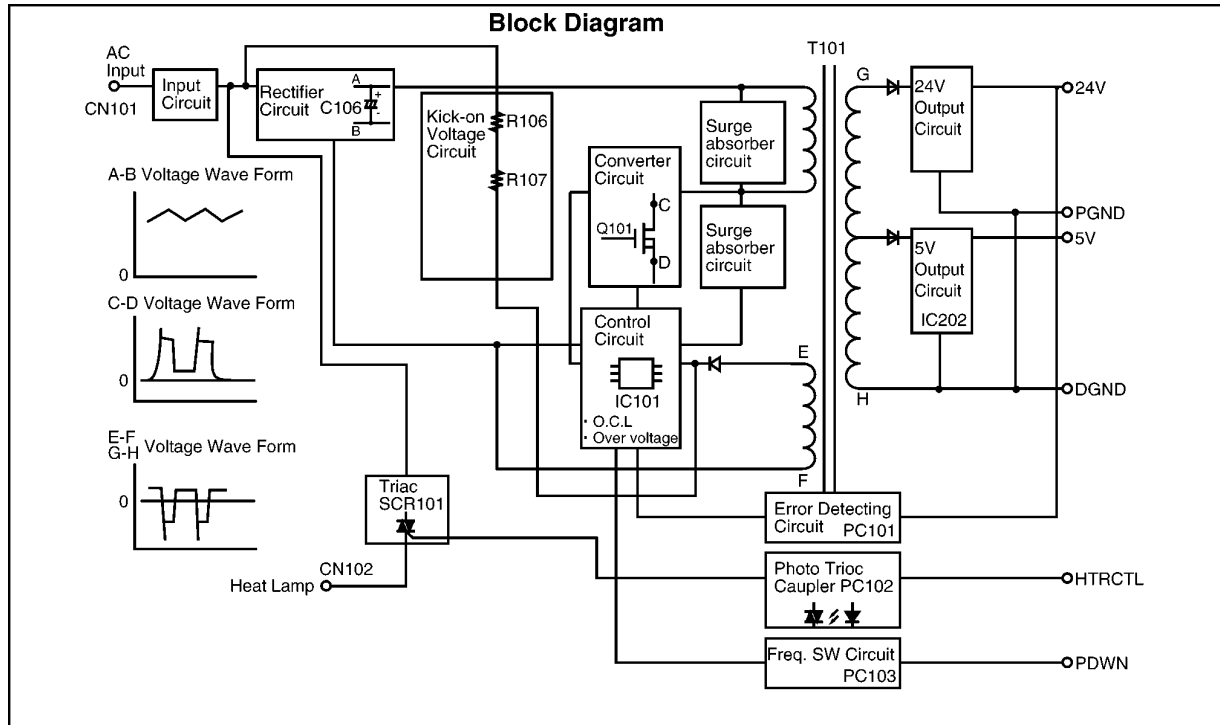

Check the following parts first: F101, D101-D104, C106, Q101, PC101 and IC101.

This comes from our experience with experimental tests. For example: power supply and lightning surge voltage test, withstanding voltage test, intentional short circuit test, etc.

**Caution:**

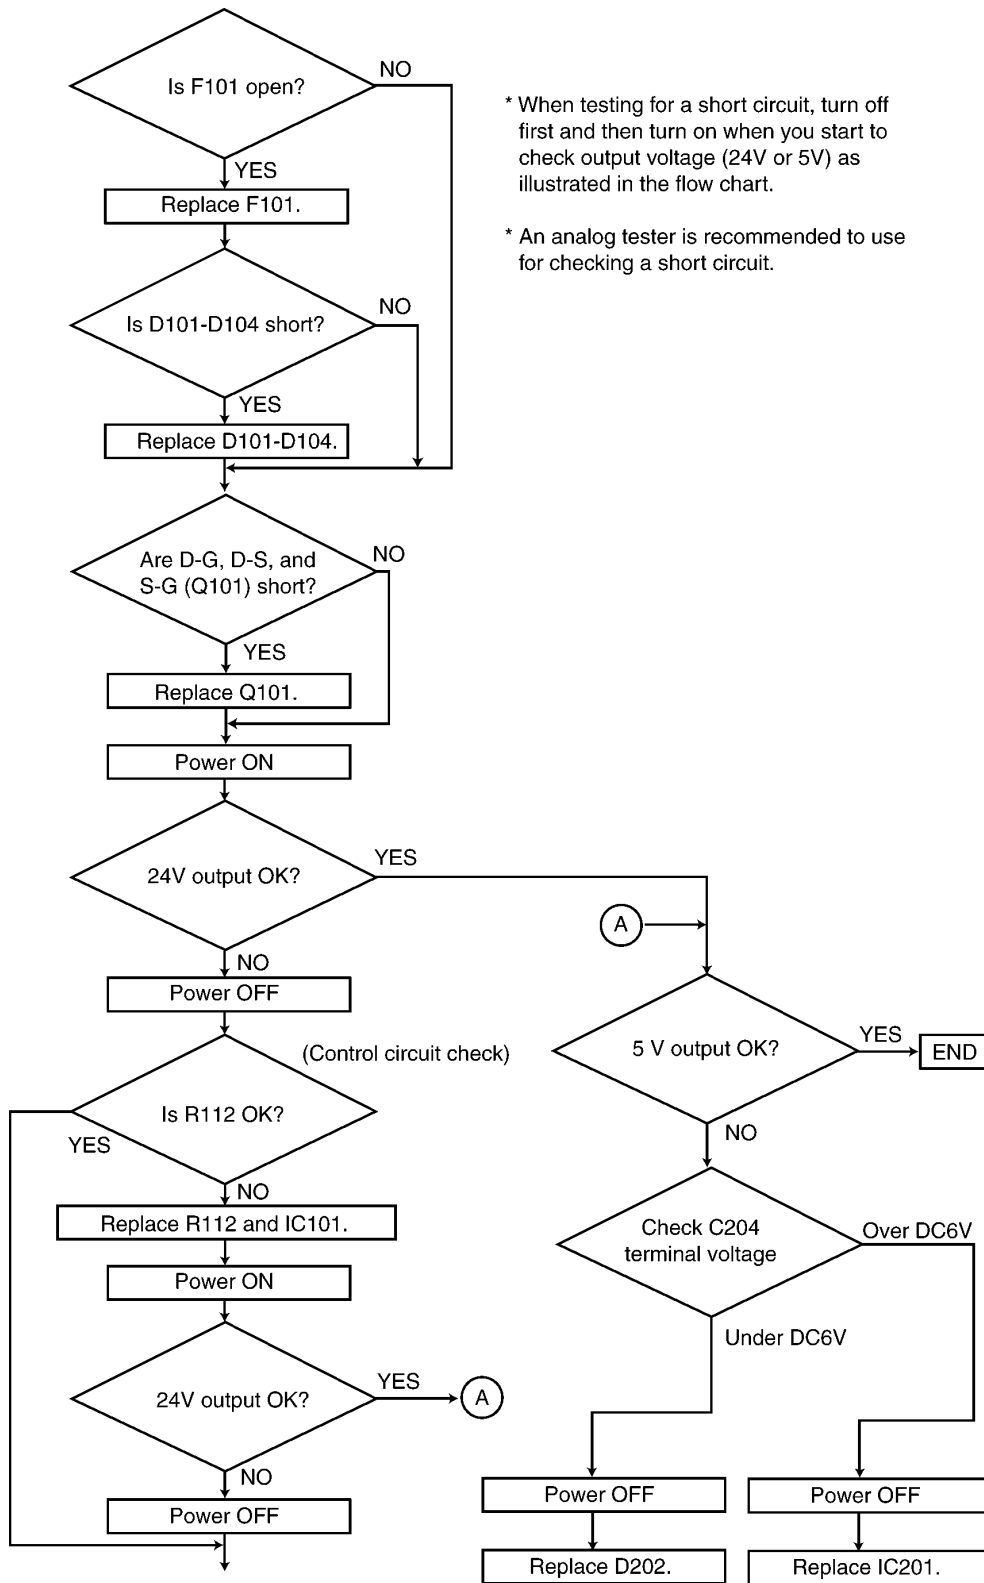

If you find a melted fuse in the unit, do not turn on the power until you locate and repair the faulty parts (except for the fuse); otherwise the fuse will melt again and you cannot pinpoint the faulty point.

In most cases, the symptom is that nothing is output. It is more likely that the fault is in the primary side rather than the secondary side. Check the primary side first.

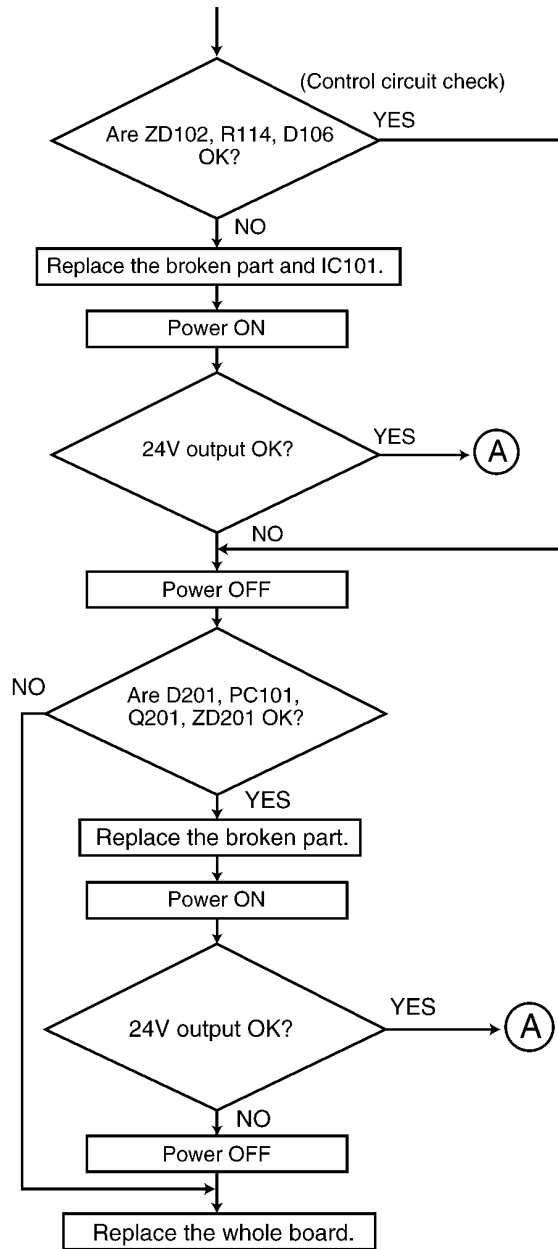

### 6.5.17.2. TROUBLESHOOTING FLOW CHART

\* When testing for a short circuit, turn off first and then turn on when you start to check output voltage (24V or 5V) as illustrated in the flow chart.

\* An analog tester is recommended to use for checking a short circuit.

### 6.5.17.3. BROKEN PARTS REPAIR DETAILS

(D101~D104)

Check for a short-circuit in terminal 4. If D101~D104 is short-circuit, F101 will melt (open). In this case, replace all of the parts (D101~D104, F101).

(Q101)

The worst case of Q101 is a short-circuit between the Drain and Gate because damage expands to the peripheral circuit of Q101. This is due to a very high voltage through the Gate circuit which is composed of R109 and IC101.

You should change all of the parts listed as follows.

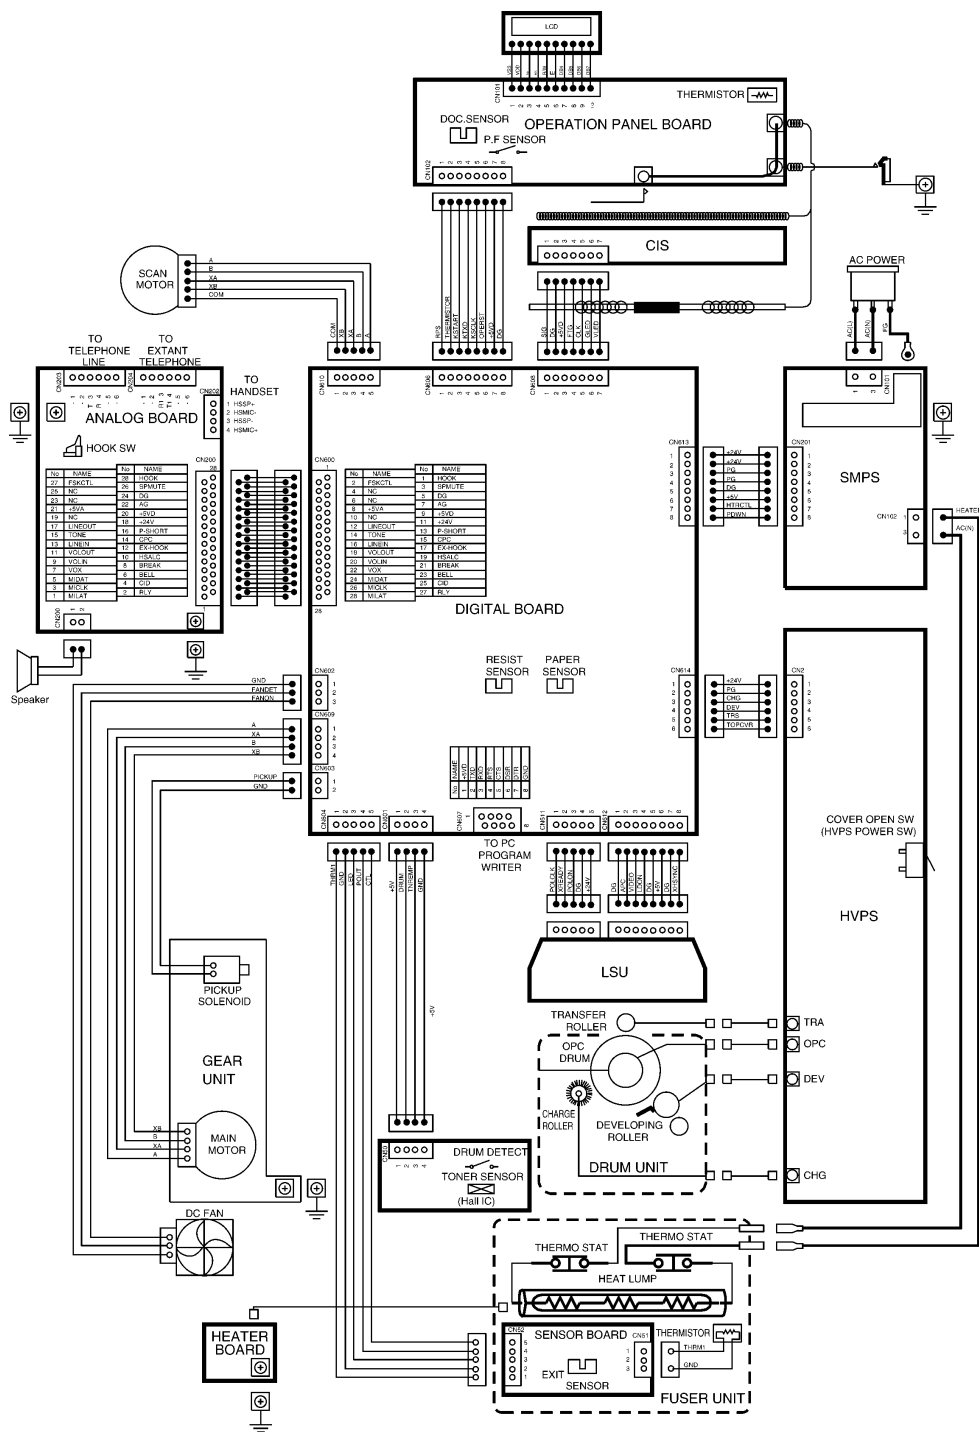

F101, Q101, R109, IC101

(D201)

If D201 is broken, the oscillation circuit in the power supply cannot operate. Check it with an electric tester.

# 7 CIRCUIT OPERATIONS

## 7.1. CONNECTION DIAGRAM

## 7.2. GENERAL BLOCK DIAGRAM

The following is an outline of each device IC on the digital board.

### 1. ASIC (IC606)

This custom IC is used for general FAX operations.

(1)	CPU:	This model uses a Z80 equivalent CPU operating at 16MHz. Many of the peripheral functions are handled by custom designed LSIs. As a result, the CPU only needs to process the results.
(2)	RTC:	Real time clock.
(3)	DECODER:	Decodes the address.
(4)	ROM/RAM I/F:	Controls the SELECT signal of ROM or RAM and bank switching.
(5)	LSU I/F:	Controls the polygon motor and outputs the VIDEO signal to LSU.
(6)	I/O PORT:	I/O Port Interface.
(7)	ANALOG UNIT:	Sends beep tones, etc. Convert the analog signal to the digital signal.
(8)	MOTOR I/F:	Controls the SCAN Motor.

### 2. G/A (IC605)

- (1) OPERATION PANEL I/F: Serial interface with Operation Panel.
- (2) ANALOG GATE ARRAY I/F: Controls the ANALOG GATE ARRAY.
- (3) MOTOR I/F: Controls the ENGINE Motor.
- (4) FAN I/F: Controls FAN MOTOR and detect the rotation of FAN MOTOR.
- (5) SENSOR I/F: Controls the LED and detect the sensor signal.
- (6) I/O PORT: I/O Port Interface.

### 3. ROM (IC607)

This 8MB FLASH ROM contains all of the program instructions on the unit operations.

### 4. Synchronous Dynamic RAM (IC604)

This SDRAM is used for CPU work and receiving memory and page memory.

### 5. MODEM (IC600)

Performs the modulation and the demodulation for FAX communication.  
Detects the CALLER ID signal.

### 6. Read Section

CIS image sensor to read transmitted documents.

### 7. LSU (Laser Scanning Unit)

Forms the images on the OPC drum by rotating polygon motor and reflecting the laser beam against polygon.

### 8. Analog Board

Composed of ITS circuit and NCU circuit.

### 9. Sensor Section

Composed of 4 switches and 5 sensors.

### 10. Power Supply Board Switching Section

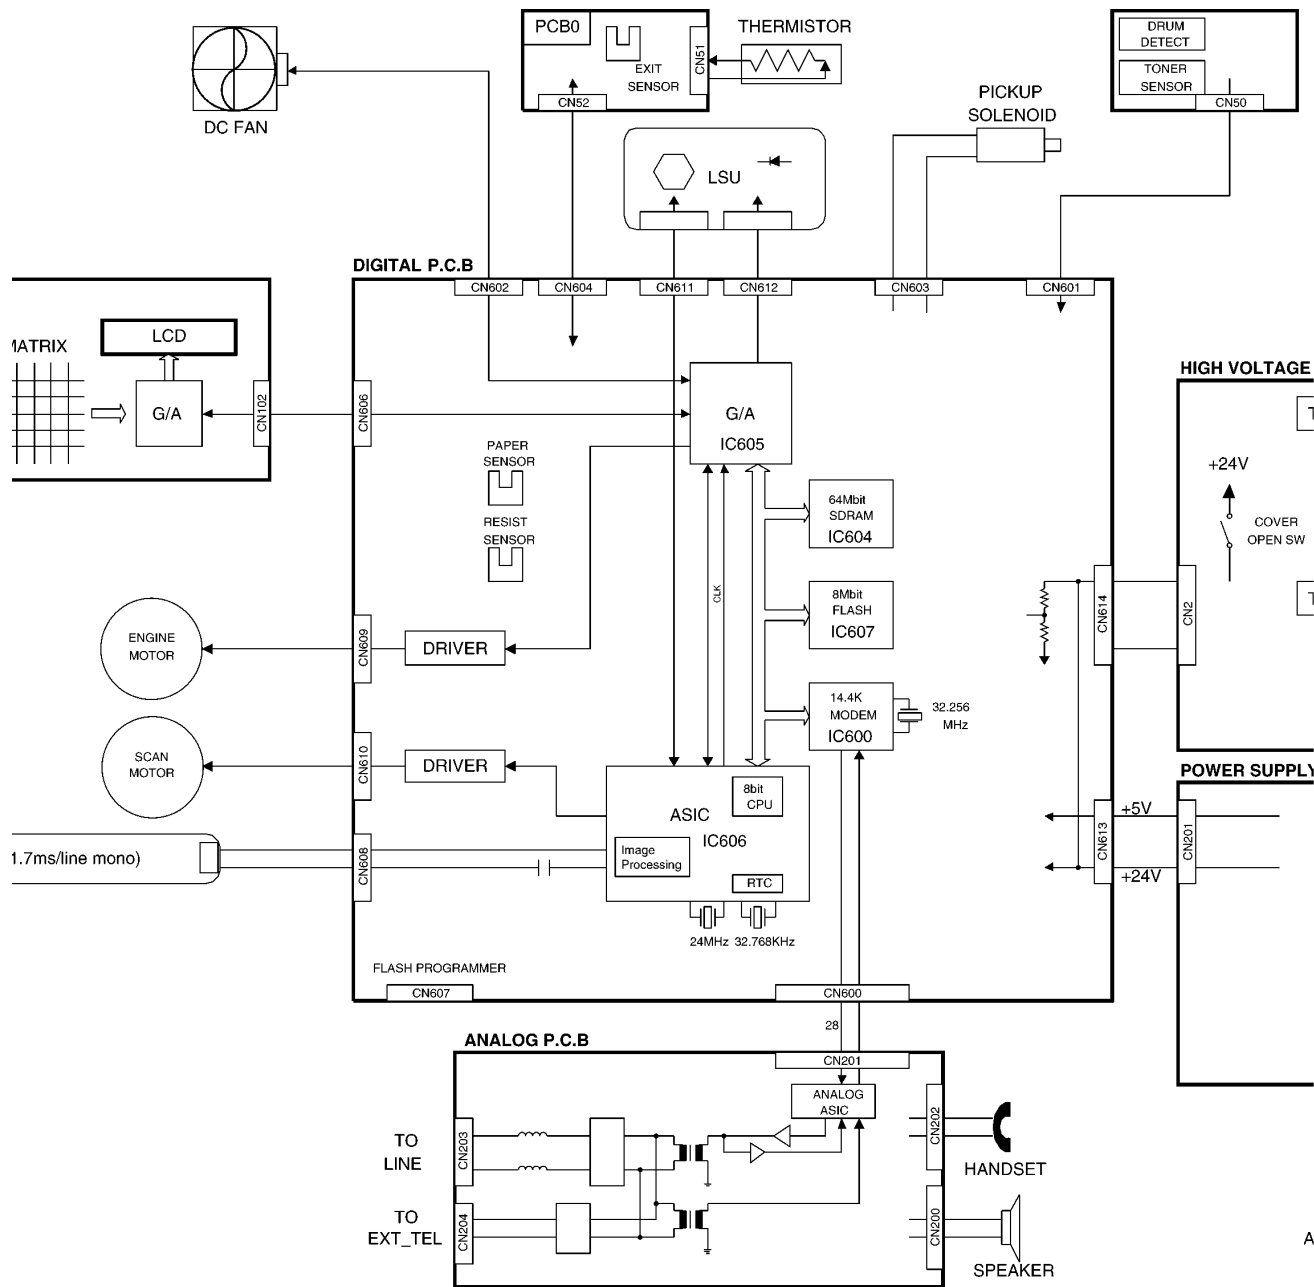

Supplies +5V and +24V to the unit and controls the HEATER.

### 11. High Voltage Power Supply Board Section

Supplies bias need for the printing operation: bias of the DRUM, Developing and Transcription.

### 12. Fixing Unit

Composed heat lamp, thermistor and thermal fuse.

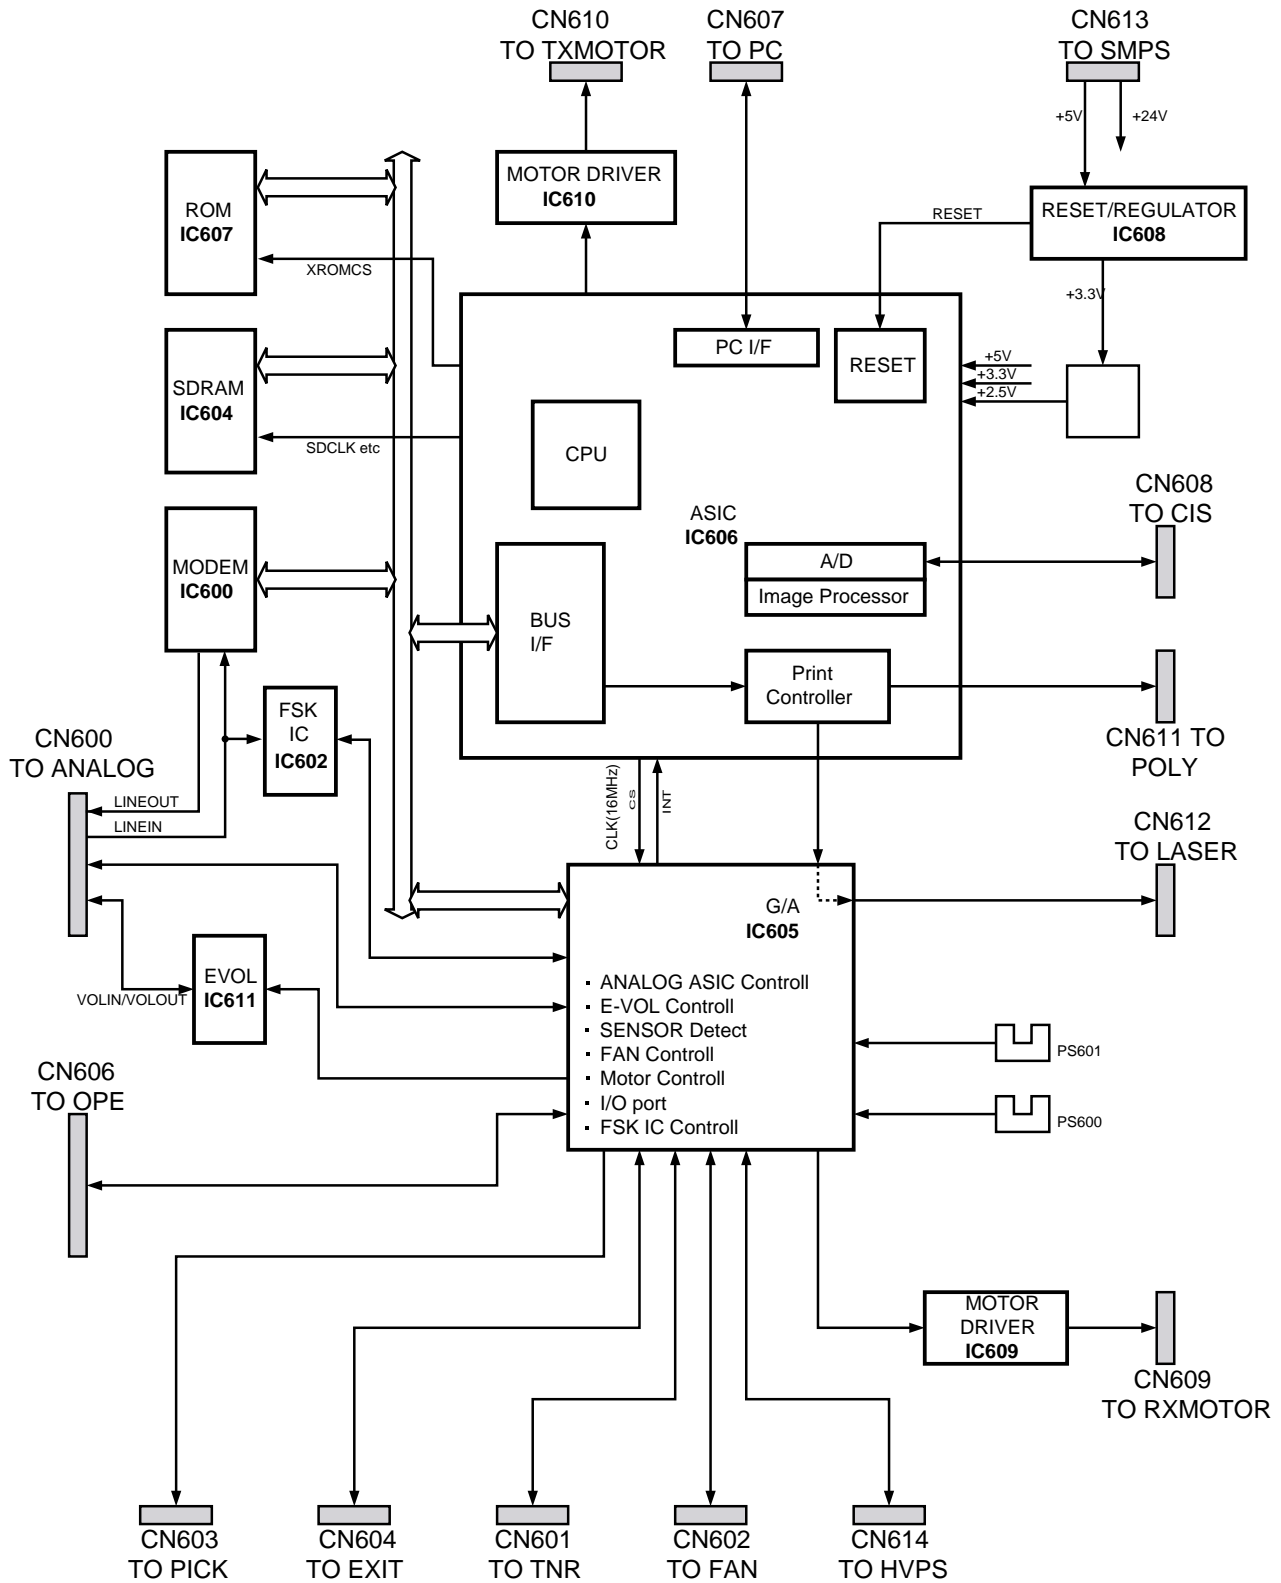

A

### 7.3. FACSIMILE SECTION

#### 7.3.1. DIGITAL SECTION

##### 7.3.1.1. DIGITAL BLOCK DIAGRAM

### 7.3.1.2. ASIC (IC606)

This custom IC is used for general FAX operations.

(1) CPU:	This model uses a Z80 equivalent CPU operating at 16MHz. Many of the peripheral functions are handled by custom designed LSIs. As a result,the CPU only needs to process the results.
(2) RTC:	Real time clock.
(3) DECODER:	Decodes the address.
(4) ROM/RAM I/F:	Controls the SELECT signal of ROM or RAM and bank switching.
(5) LSU I/F:	Controls the polygon motor and outputs the VIDEO signal to LSU.
(6) I/O PORT:	I/O Port Interface.
(7) ANALOG UNIT:	Sends beep tones,etc. Convert the analog signal to the digital signal.
(8) MOTOR I/F:	Controls the SCAN Motor.

### 7.3.1.3. ROM (IC607)

This 8MB FLASH ROM contains all of the program instructions on the unit operations.

### 7.3.1.4. GATE ARRAY (IC605)

- (1) OPERATION PANEL I/F: Serial interface with Operation Panel.
- (2) ANALOG GATE ARRAY I/F: Controls the ANALOG GATE ARRAY.
- (3) MOTOR I/F: Controls the ENGINE Motor.
- (4) FAN I/F: Controls FAN MOTOR and detect the rotation of FAN MOTOR.
- (5) SENSOR I/F: Controls the LED and detect the sensor signal.
- (6) I/O PORT: I/O Port Interface.

### 7.3.1.5. SYNCHRONOUS DYNAMIC RAM (IC604)

This SDRAM is used for CPU work and receiving memory and page memory.

### 7.3.1.6. MODEM(IC600)

Performs the modulation and the demodulation for FAX communication.  
Detects the CALLER ID (DTMF) signal.

### 7.3.1.7. FSK RECEIVER (IC602)

Detects the CALLER ID (FSK) signal.

#### Description of Pin Distribution (IC606)

PIN No.	SIGNAL	I/O	POWER SUPPLIED VOLTAGE	EXPLANATION

## 7.3.2. RTC BACKUP CIRCUIT

### 1. Function

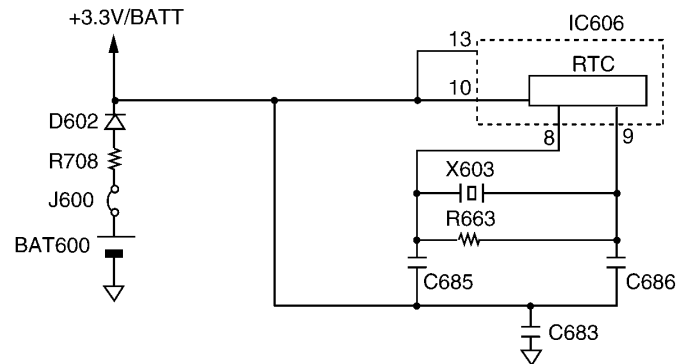

This unit has a lithium battery (BAT600) which works for the Real Time Clock IC (RTC: inside IC606).

The RTC continues to work, backed up by a lithium battery even when the power switch is OFF.

### 2. RTC Inside (IC606) Backup Circuit Operation

When the power switch is turned ON, power is supplied to the RTC (inside IC606). At this time, the voltage at pin 10 of the IC606 is +3.3V. When the power switch is turned OFF, the BAT600 supplies power to RTC through D602. The voltage at pin 10 of IC606 is about +2.5V. When the power switch is OFF and the voltage of +3.3V decreases, pin 10 of RTC (IC606) becomes roughly the same voltage as the battery voltage. RTC goes into the backup mode, in which the power consumption is lower.

**Circuit Diagram**

### 7.3.3. MODEM CIRCUIT OPERATION

The modem (IC600) has all the hardware satisfying the CCITT standards mentioned previously.

When the ASIC IC606 (114) is brought to a low level, the modem (IC600) is chip-selected and the resistors inside IC are selected by the select signals from ASIC (IC606) ADR0-ADR4(pin 84~88). Commands are written through the data bus, and all processing is controlled by the ASIC (IC606) according to CCITT procedures. Here, the INT signal dispatched from IRQ (pin 108 of IC600) to the ASIC (IC606) implements post processing.

This modem (IC600) has an automatic application equalizer. With training signal 1 or 2 at the time of G3 reception, it can automatically establish the optimum equalizer. The modem (IC600) operates using the 32.256MHz clock (X600).

#### 1. Facsimile Transmission/DTMF Line Send

The digital image data on the data bus is modulated in the modem (IC600), and sent from pin 69 via modem IC600, Analog gate array IC207(24→22), amplifier IC204(6→7) and the NCU section to the telephone line.

Refer to **CHECK SHEET**(P.128).

#### 2. Facsimile Reception

The analog image data which is received from the telephone line passes through the NCU section and enters pin 60 of the modem (IC600). The signals that enter pin 60 of the modem (IC600) are demodulated in the board to digital image signals, then placed on the data bus.

In this case, the image signals from the telephone line are transmitted serially. Hence, they are placed on the bus in 8 bit units. Here, the internal equalizer circuit reduces the image signals to a long-distance receiving level.

This is designed to correct the characteristics of the frequency band centered around 3 kHz and maintain a constant receiving sensitivity.

It can be set in the service mode.

Refer to **CHECK SHEET**(P.128).

#### 3. DTMF Transmission (Monitor tone)

The DTMF signal generated in the modem (IC600) is output from pin 69, and the NCU section to the telephone line the same as facsimile transmission signals.

##### (DTMF Monitor Tone)

Refer to **CHECK SHEET**(P.128).

#### 4. Busy/Dial Tone Detection

The path is the same as FAX receiving. When it is detected, the carrier detect bit of the resistor in the modem (IC600) becomes 1, and this status is monitored by ASIC (IC606).

#### 5. Call Tone Transmission

This is the call signal which is generated the ASIC (IC606) and sent to the speaker.

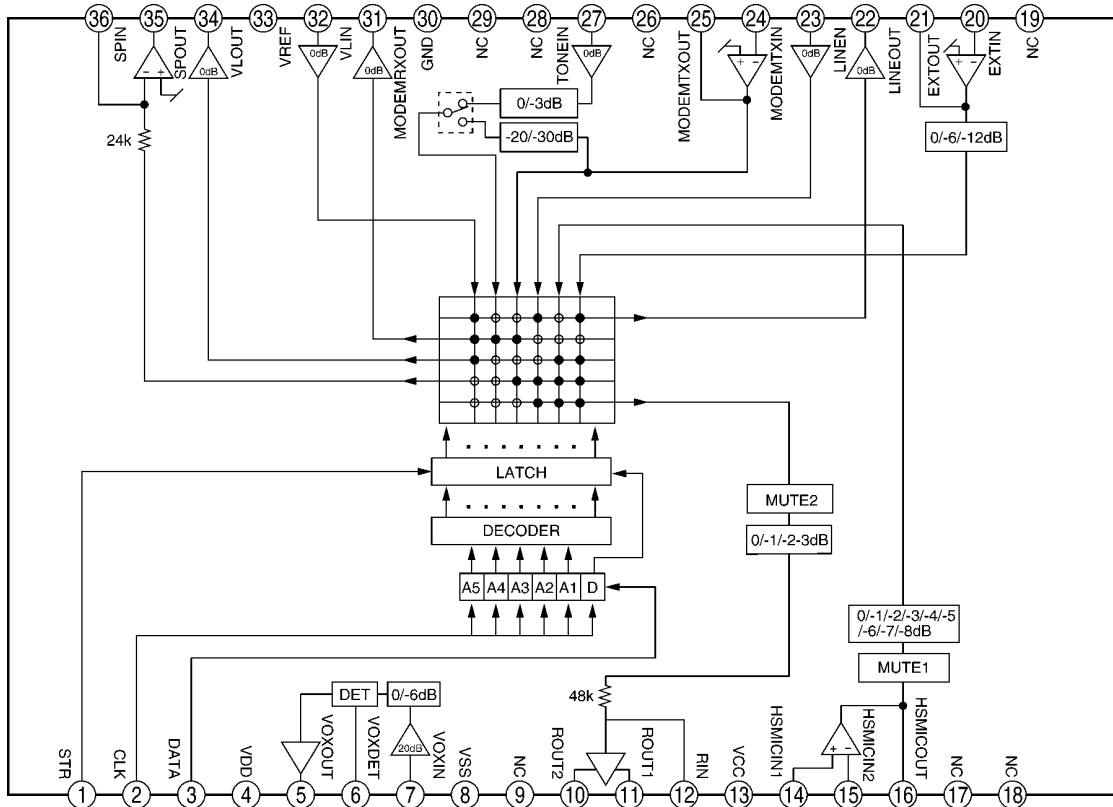

### 7.3.4. ANALOG SECTION

Composed of ITS circuit and NCU circuit.

#### 7.3.4.1. ANALOG GATE ARRAY (IC207)

The cross-point switch installed in this IC makes it possible to change the circuit configuration for any analog signals such as the fax signals sent from the digital board. In addition, this analog gate array integrates a handset circuit, input/output ports, etc.

This IC is controlled by ASIC(IC606) through GATE ARRAY (IC605) on the digital board.

Explanation of ANALOG GATE ARRAY (IC207 on the ANALOG Board)

No.	Name	Function	No.	Name	Function
1	STR	Strobe input	19	NC	Not used
2	CLOCK	Clock input	20	EXTIN	Ext amp output
3	DATA	Data input	21	EXTOUT	Ext amp input
4	VDD	Logic power supply	22	LINEOUT	Line amp output
5	VOXOUT	VOX output	23	LINEIN	Line amp input
6	VOXDET	VOX detection adjustment	24	MODEMTXIN	MODEM TX amp input
7	VOXIN	VOX input	25	MODEMTXOUT	MODEM TX amp output
8	VSS	Logic ground	26	NC	Not used
9	NC	Not used	27	TONEIN	Tone amp input
10	ROUT2	HS receiver amp output 2	28	NC	Not used
11	ROUT1	HS receiver amp output 1	29	NC	Not used
12	RIN	HS receiver amp input	30	GND	Analog ground
13	VCC	Analog ground	31	MODEMRXOUT	MODEM RX amp output
14	HSMICIN1	HS mic amp input 1	32	VLIN	Volume amp input
15	HSMICIN2	HS mic amp input 2	33	VREF	Reference voltage output
16	HSMICOUT	HS mic amp output	34	VLOUT	Volume amp output
17	NC	Not used	35	SPOUT	Speaker amp output
18	NC	Not used	36	SPIN	Speaker amp input

## 7.3.4.2. DESCRIPTION OF BLOCK DIAGRAM IN ANALOG SECTION

### 1. Function

The analog section works as an interface between the telephone line.

The analog ASIC (IC207) on the analog board exchanges FAX TX and RX signals between the MODEM (IC600) and the analog section.

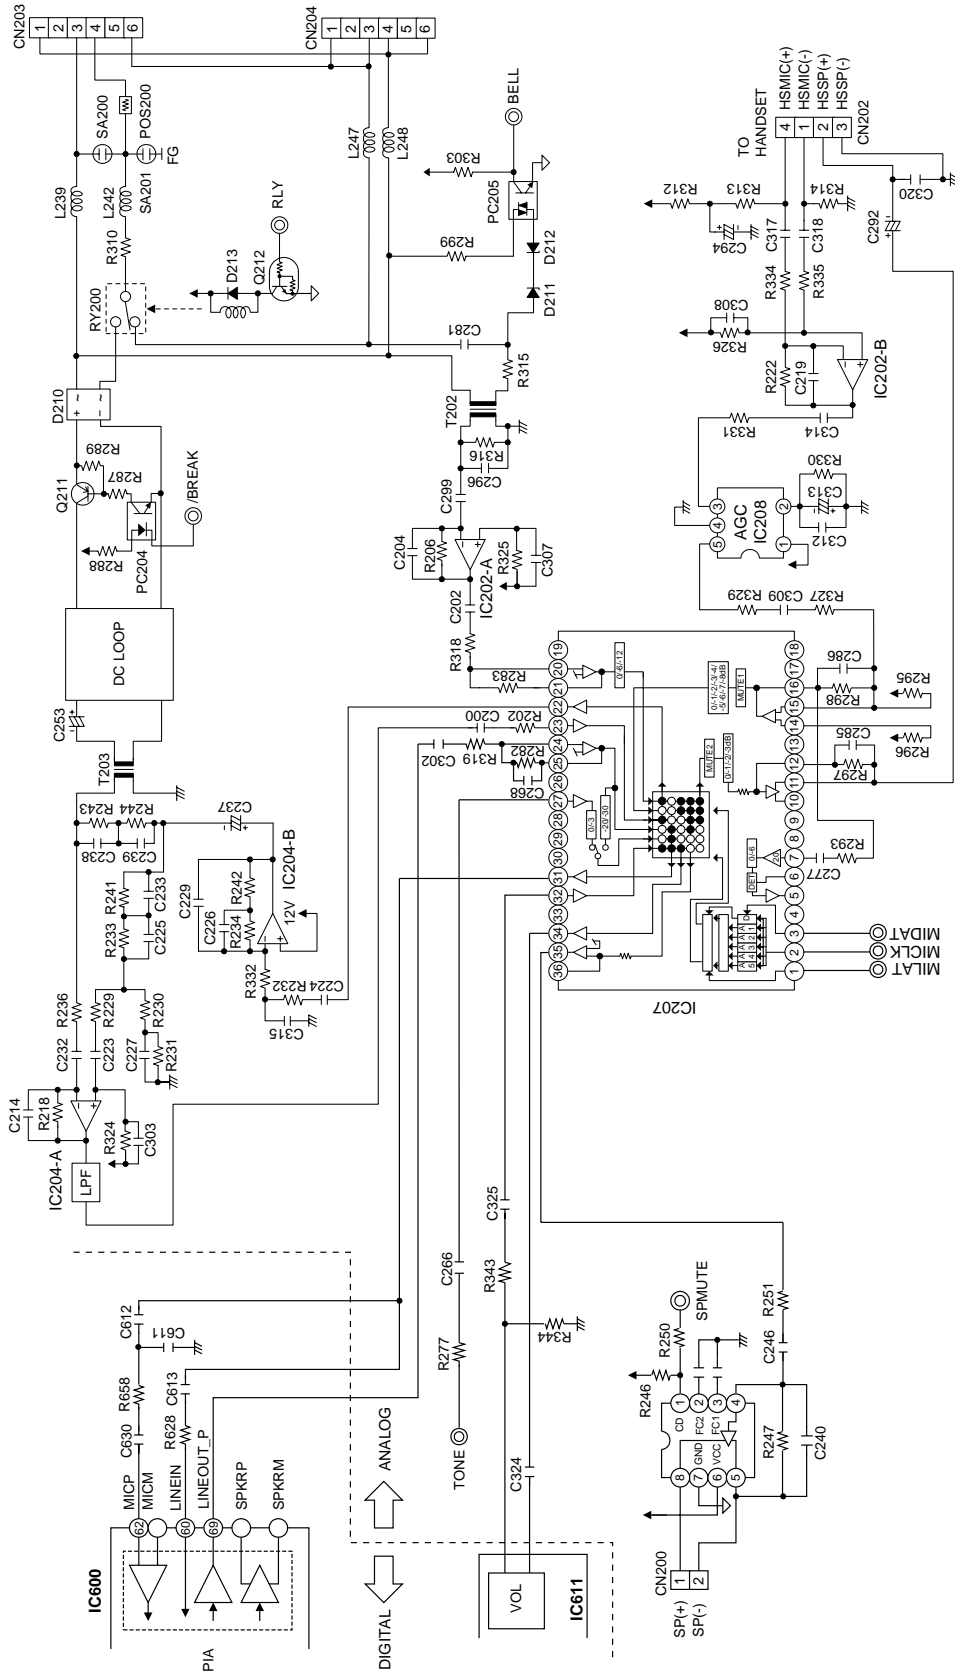

The control signals transmitted to the analog section are output mainly from G/A IC605, and the analog status is stored as data in G/A IC605.

### 2. Circuit Operation

[NCU]: Network Control Unit the NCU comprises of the following; DC loop forming circuit to connect with the telephone line; Switching circuit for other interconnected telephones; Bell detection circuit; Side tone circuit; Remote fax activation circuit.

Refer to **NCU SECTION** (P.161) for the details.

### 7.3.4.3. BLOCK DIAGRAM

KX-FL612CX : ANALOG BOARD : BLOCK DIAGRAM

## 7.4. NCU SECTION

### 7.4.1. GENERAL

This section is the interface between the telephone line and external telephone. It is composed of an EXT. TEL line relay (RLY200), bell detection circuit, TAM interface circuit, line amplifier and side tone circuits and a multiplexer.

### 7.4.2. EXT. TEL. LINE RELAY (RLY200)

#### 1. Circuit Operation

Normally, this relay switches to the external telephone side (break) and switches to the open side (make) while OFF-HOOK.

{ IC605 (95) High Level→CN600 (27) High Level} →CN201 (2) High Level→Q212 ON→RLY200 (ON)→(make)

{ IC605 (93) LOW Level→CN600 (21) LOW Level} →CN201 (8) LOW Level→PC204 ON→Q211 (ON)→(make)

### 7.4.3. BELL DETECTION CIRCUIT

#### 1. Circuit Operation

The signal waveform for each point is indicated below. The signal (low level section) input to pin 6 of gate array IC605 on the digital board is read by ASIC and judged as a bell.

TEL LINE→PC205 (1, 2 - 4)→IC605 (6)

Between the Tip and Ring  
from the telephone line

Between PC205 (1) and (2)

PC205 (4)G/A IC605 (6)

### 7.4.4. CALLING LINE IDENTIFICATION CIRCUIT

#### 1. Function

This unit is compatible with the Caller ID service offered by your local telephone company. To use this feature, you must subscribe to a Caller ID service. The data for the caller ID from the telephone exchange is sent during the interval between the first and second rings of the bell signal. The data from the telephone exchange is a modem signal which is modulated in an FSK (Frequency Shift Keying) format. Data "0" is a 1200 Hz sine wave, and data 1 a 2200 Hz sine wave.

There are two type of the message format which can be received: i.e.the single data message format and multiple data message format.

The multiple data format allows to transmit the name and data code information in addition to the time and telephone number data.

When there is multiple data in the unit, the name or telephone number are displayed.

#### 2. Circuit Operation

FSK signal of the caller ID signal input from TEL LINE is processed with FSK receiver (IC602).

Refer to **CHECK SHEET** (P.128) for the route of caller ID signal.

### 7.4.5. LINE AMPLIFIER AND SIDE TONE CIRCUIT

#### 1. Circuit Operation

The reception signal output from the line transformer T201 is input to pin (2) of IC204 via C232, R236 and then the signal is amplified at pin (1) of IC204 and sent to the reception system.

The transmission signal goes through C224, R232 and enters IC204-pin (6), where the signal is amplified. Then, it is output from pin (7) of IC204 and transmitted to T201 via L230, C237, R244, R243. Without a side tone circuit, the transmission signal will return to the reception amplifier via R236, C232. When the side tone circuit is active, the signal output from IC204 pin (7) passes through L230, C237, R241, R233, C225, C223, and R229 and goes into the amplifier IC204 pin (3). This circuit is used to cancel the transmission return signal.

The TX signal is output to the circuit analog the route from the IC204 7 pin→L230→C237→R244→R243→T201→TEL LINE. However, if balance is lost in the bridge, a voltage occurs between the IC207 6 pin and 5 pin and a side tone results, because the balance cannot be maintained completely at all frequencies in the audio range some side tone always occur.

### 7.4.6. LOW PASS FILTER AND NOTCH FILTER

#### 1. Function

This low pass filter and notch filter attenuates the account signal from the commutator to eliminate influence on the conversation and communication.

#### 2. Circuit Operation

This low pass filter is an eight-order active filter, and the cutoff frequency is approximately 4 kHz.

NOTCH FILTER has filter pole of account signal frequency.

## 7.4.7. REMOTE FAX ACTIVATION CIRCUIT

### 1. Function

Another telephone connected to same line activates the unit to the FAX mode by using a DTMF signal.

### 2. Signal Path

Refer to **CHECK SHEET** (P.128).

## 7.4.8. TAM INTERFACE CIRCUIT

This circuit is to switch between FAX receiving and the external TAM's message recording automatically. This circuit consists of the monitor, transformer and amplifier.

For details, please refer to **TAM INTERFACE SECTION** (P.164).

## 7.5. ITS (Integrated telephone System) and MONITOR SECTION

### 7.5.1. GENERAL

The general ITS operation is performed by the special IC207 which has a handset circuit. The alarm tone, the key tone, and the beep are output from the ASIC IC606 (digital board).

#### 7.5.1.1. TELEPHONE MONITOR

##### 1. Function

This is the function when you are not holding the handset and can hear the caller's voice from the line.

##### 2. Circuit Operation

(Telephone Monitor Signal Path)

Signals received from the telephone line are output through at the speaker via the following path.

##### 3. Signal Path

Refer to **CHECK SHEET**.

### 7.5.1.2. HANDSET CIRCUIT

#### 1. Function

This circuit controls the conversation over the handset, i.e. the transmitted and received voices to and from the handset.

#### 2. Signal Path (Transmission signal)

Refer to **CHECK SHEET**.

#### 3. Signal path (Reception signal)

Refer to **CHECK SHEET**.

### 7.5.1.3. MONITOR CIRCUIT

#### 1. Function

This circuit monitors various tones, such as (1) DTMF tone, (2) Alarm/Beep/Key tone/Bell.

#### 2. Signal Path

##### a. DTMF MONITOR

(Speaker Operation)

Refer to **CHECK SHEET**.

(Handset Operation)

Refer to **CHECK SHEET**.

##### b. ALARM/BEEP/KEY TONE/BELL

Refer to **CHECK SHEET**.

### 7.5.1.4. TAM INTERFACE SECTION

#### 1. Function

When TAM is connected to this unit, the unit receives documents for FAX calls or the external TAM records a voice message automatically.

#### 2. Circuit Operation

The TAM INTERFACE circuit consists of the transformer (T202), amplifier (IC202), analog ASIC (IC207), MODEM (IC600) on the digital board to detect the other party CNG signal, and RLY200 to separate EXT.TAM.

##### a. CNG signal detection circuit

The CNG signal from the other party's FAX is detected in MODEM IC600 (digital board).

(Signal path)

Refer to **CHECK SHEET**(P.128).

##### b. Remote receiving

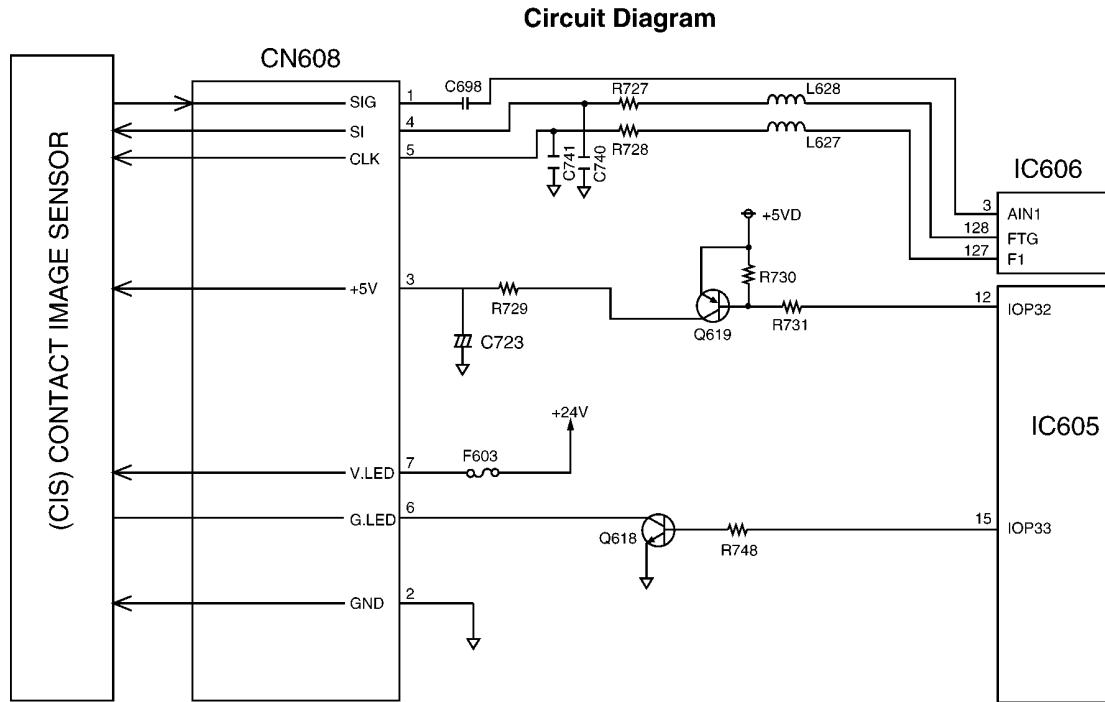

This is the parallel-connected DTMF signal for the TEL or EXT.TEL mode between T and R. When the other party is a FAX, the unit switches to FAX receiving.

(Signal Path)

Refer to **CHECK SHEET**(P.128).

## 7.6. CIS CONTROL SECTION

The scanning block of this device consists of a control circuit and a contact image sensor made up of a celfoc lens array, an LED, a light guide, and photoelectric conversion elements.

When an original document is inserted and the start button pressed, pin 15 of IC605 goes to a high level and the transistor Q618 turns on. This applies voltage to the LED to light it. The contact image sensor is driven by each of the FTG-F1 signals output from IC606, and the original image illuminated by the LED undergoes photoelectric conversion to output an analog image signal (SIG). The analog image signal is input to the system ASIC on AIN1 (pin 3 of IC606) and converted into 8-bit data by the A/D converter inside IC606. Then this signal undergoes digital processing in order to obtain a high-quality image.

## 7.7. STEPPING MOTOR DRIVE SECTION

### 7.7.1. ENGINE MOTOR DRIVE CIRCUIT

#### 1. Functions

This motor functions for main operations FAX reception and copy printing.  
 This feed recording paper synchronized for printing.

#### 2. Motor operation

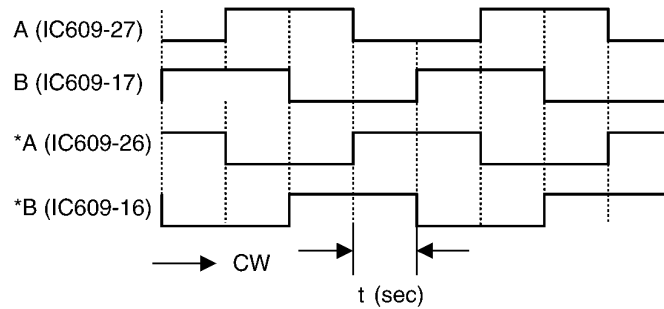

Excitation pulses is output from G/A (IC605) pins 83, 84, 85 and 86. Then stepping pulses are output from driver IC (IC609) pin No 2, 7, 8 and 13, and drives the motor coil.

During motor driving, pin 90 of G/A IC605 becomes a low level.

As a result, a current of about 1A are supplied to the motor coil.

#### 7.7.1.1. TIMING CHART

① 2 phase excitation

② 2 phase excitation output waveform (example "A Phase")

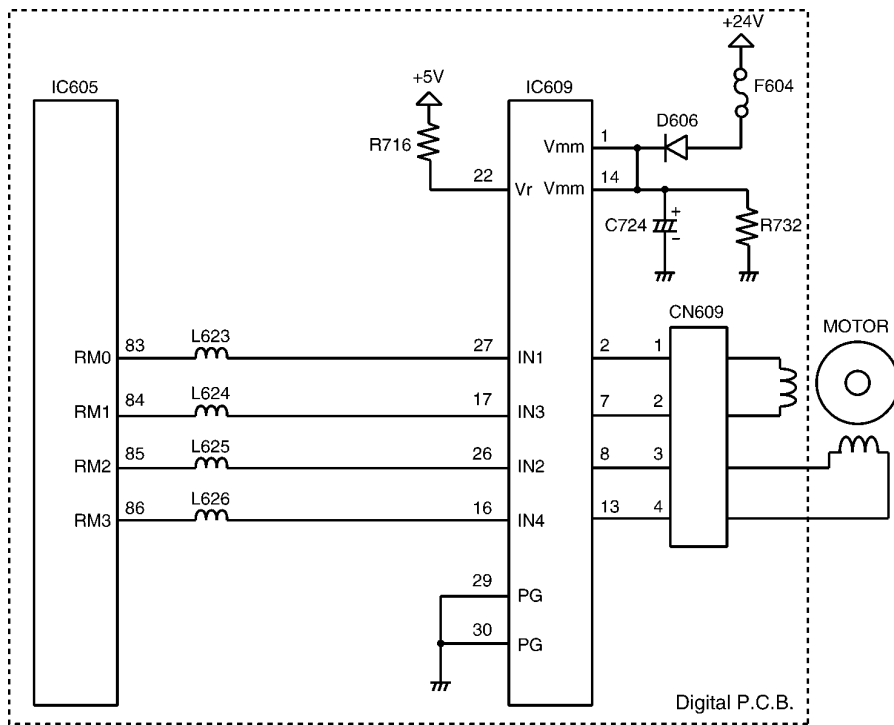

Other phase (B, \*A, \*B) operates as A phase does.

#### DRIVE MODE

FUNCTION	MODE	PHASE PATTERN	SPEED	CURRENT
PRINT	-	2 phase	951pps	1A

### 7.7.1.2. ENGINE MOTOR DRIVE CIRCUIT

## 7.7.2. SCAN MOTOR DRIVE CIRCUIT

### 1. Functions

This motor functions for main operations including FAX transmission.

This feed document paper synchronized for reading.

### 2. Motor operation

During motor driving, pin 25 of ASIC IC606 becomes a high level, and Q613, Q620 turns ON.

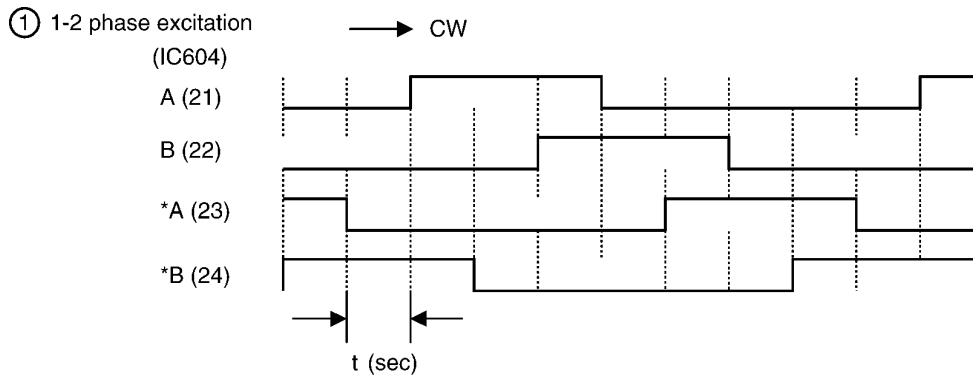

As a result, +24V is supplied to the motor coil.

Stepping pulses are output from ASIC IC606 pins, 21, 22, 23, 24, causing driver IC610 pins, 16 ~ 13 to drive the motor coil.

The motor coil is energized sequentially in 2 phase increments, which causes a 1-step rotation.

A 1-step rotation feeds 0.065mm of document paper.

### 7.7.2.1. TIMING CHART

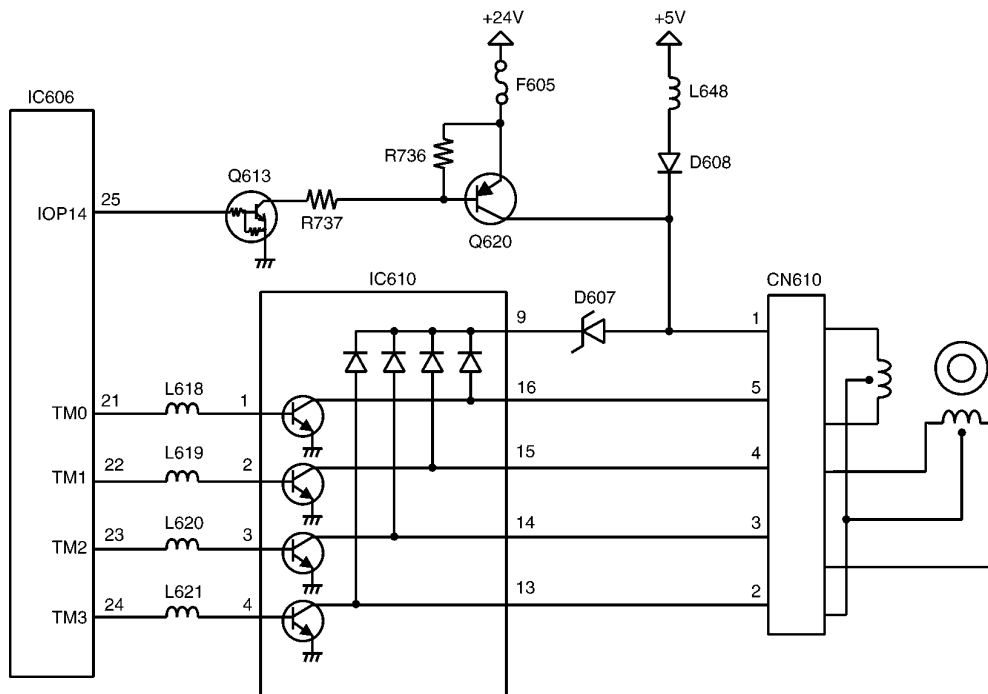

② 1-2 phase excitation output wave form (example "A Phase")

Other phase (B, \*A, \*B) operates as A phase does.

### 7.7.2.2. SCAN MOTOR (ADF MOTOR) DRIVE CIRCUIT

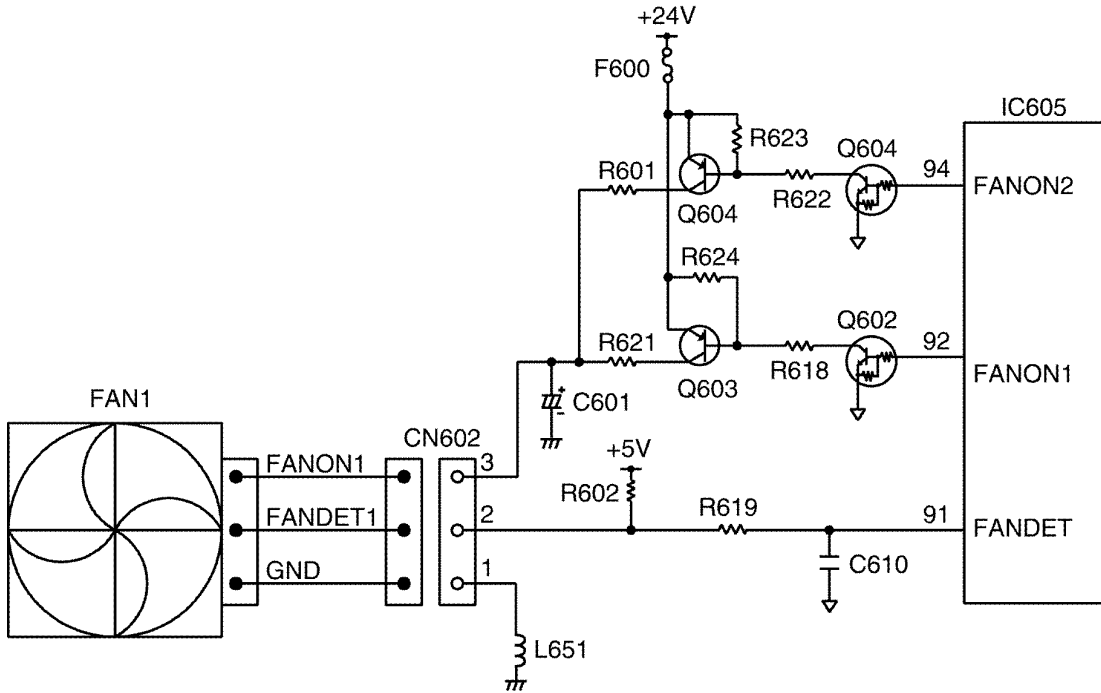

#### DRIVE MODE

FUNCTION		MODE	PHASE PATTERN	SPEED
SCAN	FAX	STANDARD	2 phase	579pps
SCAN	FAX/COPY	FINE/PHOTO	2 phase	579pps
SCAN	FAX/COPY	SUPER FINE	1-2 phase	579pps
SCAN	FAX/COPY	PHOTO WITH TEXT	2 phase	579pps
SCAN	DOC.PREFEED/EJECT	-	2 phase	579pps
STAND-BY		-	ALL PHASE OFF	-

## 7.8. FAN MOTOR SECTION

This FAN is used to radiate heat in the unit.

The signal level at pin 92/94 of IC605 becomes high, the FAN is activated. In this case, the pulse signal as shown below input to pin 91 of IC605 and the rotation of the FAN is detected.

## 7.8.1. FAN CONTROL

This unit is equipped with fan to prevent the developing device from rising in temperature while printing.

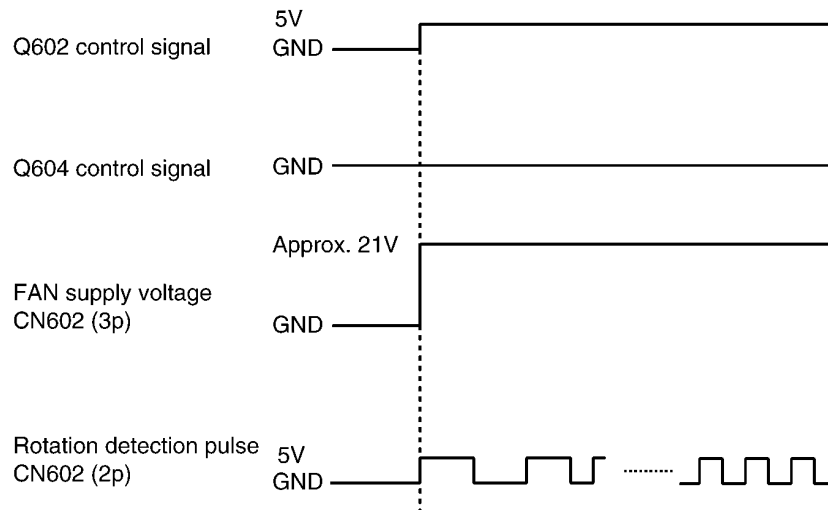

The air is inhaled from the right side of the unit.

The fan rotates at high speed (Approx. 3000 rpm) while printing (controlling the developing device). After printing is finished, it rotates at low speed (Approx. 2200 rpm) when the temperature of the unit goes up over a fixed one or depending on the number of printed papers (frequency).

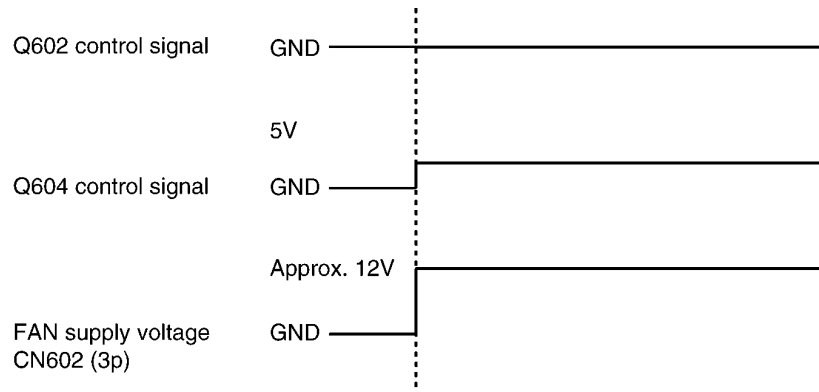

While the fan is rotating at high speed, the voltage of Approx. 21 V is supplied to the fan, however, while rotating at low speed, the supply voltage is decreased to Approx. 12V.

### Each signal wave is as follows:

#### 1. High-speed rotation (typ. 3000 rpm)

#### 2. Low-speed rotation (typ. 2200 rpm)

## 7.9. SOLENOID DRIVE SECTION

The solenoid drive circuit controls the pick-up clutch.

The solenoid is designed to be driven by +24V, driven by IC605-17 pin.

Diode D600 protects Q607 from backward voltage when the solenoid is driven.

Mode	IC606-149 pin
SOLENOID ON	high level
SOLENOID OFF	low level

### 7.10. LSU (Laser Scanning Unit) SECTION

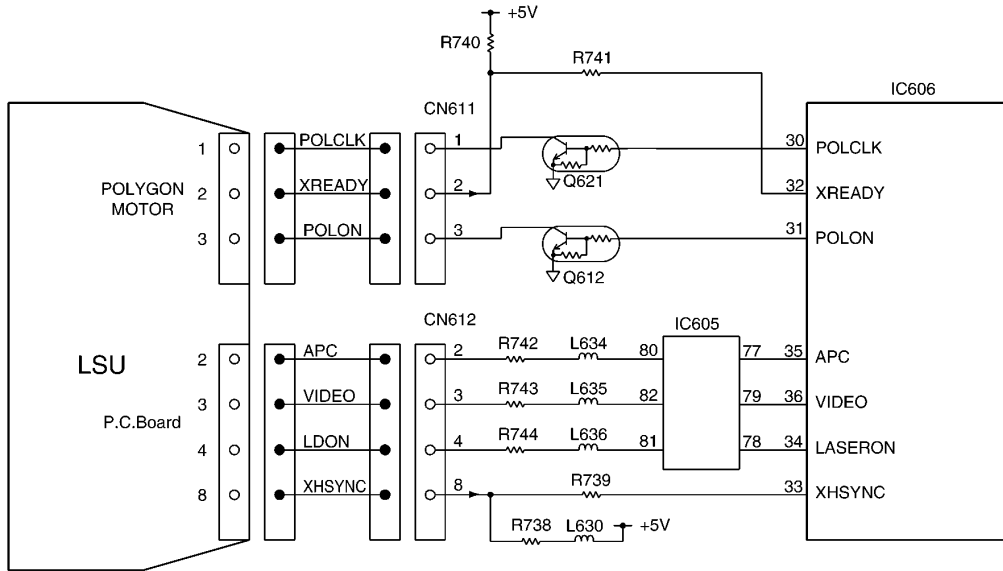

The mechanical shutter will be opened by setting DRUM UNIT properly.

- ① Laser output
- ② Laser reflecting on the drum
- ③ Laser towards the effective printing outside range onto the sensor

### Circuit Diagram

### Timing Chart

## 7.11. SENSORS AND SWITCHES SECTION

All of the sensor and switches are shown below.

Sensor Circuit Location	Sensor	Sensor or Switch Name	Message Error
Operation Panel	PS101	Document set	[CHECK DOCUMENT]
Operation Panel	SW146	Paper Feed	[REMOVE DOCUMENT]
High Voltage PCB	SW101	Printer Open	[COVER OPEN]
Toner Sensor PCB	SW60	OPC Set	[CHECK DRUM]
Digital PCB	PS601	Register	[FAILED PICKUP]
Digital PCB	PS600	Paper	[OUT OF PAPER]
Exit Sensor PCB	PS51	Exit	[PAPER JAMMED]
Toner Sensor PCB	SW60,IC60	Dev & Toner Set	[TONER EMPTY] [TONER LOW] [CHECK DRUM]
Analog PCB	SW200	Hook	—————

### Note:

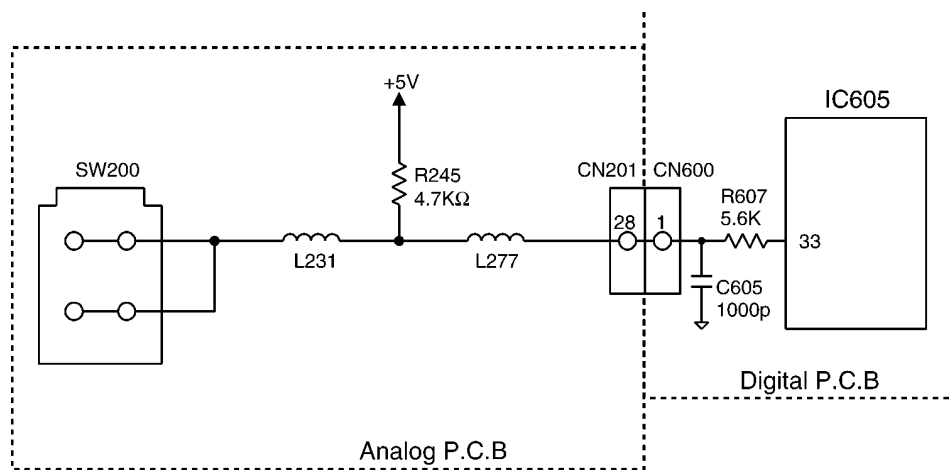

See TEST FUNCTIONS - SENSOR CHECK SECTION for the sensor test.

(#815 of Service Mode test. Refer to **TEST FUNCTIONS** (P.64).

### 7.11.1. HOOK SWITCH

When the handset is raised, the switch is turned OFF, and the signal at pin 33 of IC605 is high.

When the handset is returned, the switch is turned ON, and the signal at pin 33 of IC605 is low.

### 7.11.2. DOCUMENT SENSOR

The Sensor detects whether or not a document is in place.

When a document is detected, the shelter plate shuts off the sensor light, the photo-transistor turns OFF, and the input signal of IC101-19pin becomes a high level. When there is no document, the shelter plate let the sensor light pass through, the photo-transistor turns ON, and the input signal of IC101-19pin becomes a low level.

	Photo-transistor	Signal (IC101-19pin)
Document Set	OFF	High level
No Document	ON	Low level

### 7.11.3. PAPER FEED SENSOR

The Sensor detects the front edge of the document.

When a document is detected, the switch turns ON, and the input signal of IC605-74pin becomes a low level. When there is no document, the switch turns OFF, and the input signal of IC605-74pin becomes a high level.

	Switch	Signal (IC605-74pin)
Read Position	ON	Low level
Non Read Position	OFF	High level

### 7.11.4. TOP COVER OPEN SWITCH

The Switches detect whether the printer cover is open or closed.

When the printer cover is closed, the switches turn ON, and the input signal of IC605-37pin becomes a high level.

When the printer cover is open, the switches turns OFF, and the input signal of IC605-37pin becomes a low level.

	Switch	Signal (IC605-37 pin)
Open	OFF	Low level
Close	ON	High level

### 7.11.5. DRUM SENSOR

The Switch detects whether the OPC unit is set or not.

When there is the DRUM unit, the input signal of IC605-16pin becomes a high level.

When there is no DRUM unit, the input signal of IC605-16pin becomes a low level.

	Signal (IC605-16 pin)
DRUM Set	High level
No DRUM	Low level

### 7.11.6. REGIST SENSOR

The Sensor detects whether or not the recording paper is present so that printing can start.

When the recording paper is detected, the shelter plate let the sensor light passing through, the photo-transistor turns ON, and the input signal of IC605-5pin becomes a low level.

When there is no recording paper, the shelter plate closes the sensor light, the photo-transistor turns OFF, and the input signal of IC605-5pin becomes a high level.

	Photo-transistor	Signal (IC605-5 pin)
No Recording Paper	OFF	High level
Recording Paper Regist	ON	Low level

### 7.11.7. PAPER SENSOR..... “OUT OF PAPER”

The Sensor detects the recording paper are in place.

When the recording paper is detected, the shelter plate let the sensor light passing through, the photo-transistor turns ON, and the input signal of IC605-35 pin becomes a low level.

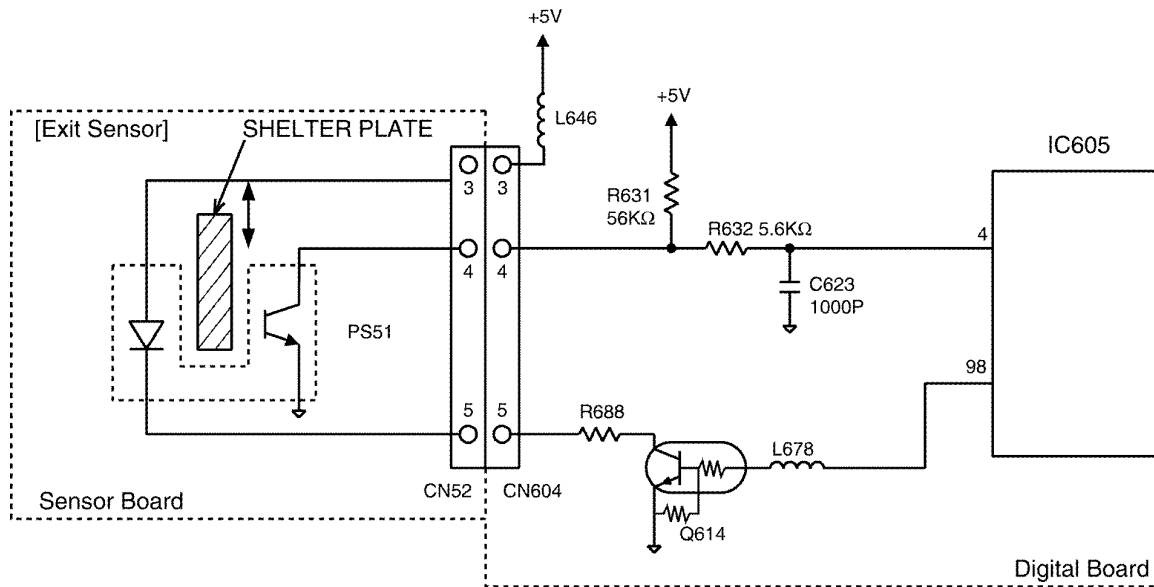

When there is no recording paper, the shelter plate closes the sensor light, the photo-transistor turns OFF, and the input signal of IC605-35 pin becomes a high level.

[Paper Sensor]

	Photo-transistor	Signal (IC605-35 pin)
Recording Paper Set	OFF	Low level
No Recording Paper	ON	High level

### 7.11.8. PAPER EXIT SENSOR..... “PAPER JAMMED”

The sensor detects whether the recording paper exit out or noy.

When there is no recording paper at the position of the sensor, the shelter plate closes the sensor light, the photo-transistor fot tarus OFF, and the input signal of IC605-4pin becomes high level.

When the recording paper reach the exit sensor, the shelter plate let the sensor light passing through, the photo-transistor ON, and the input signal of IC605-4pin becomes a low level.

[Exit Sensor]

	Photo-transistor	Signal (IC605-4 pin)
No Paper	OFF	High level
Paper Exist	ON	Low level

### 7.11.9. Detecting New Drum Units

#### Purpose

To investigate the actual number of printed papers with the drum units  
(Investigating how the returned sets' drum units were used)

#### Method

Whether the drum unit is new or old should be judged by detecting the turn delay of Mixing Paddle (Toner detection sensor).

- When shipping the drum unit, the mixing paddle gear is set to the position that has the space of more than one turn (max. 600).
- After the main motor starts, when the toner detection signal is not varied within the fixed time (max. 4.5 sec), the drum unit is found new.

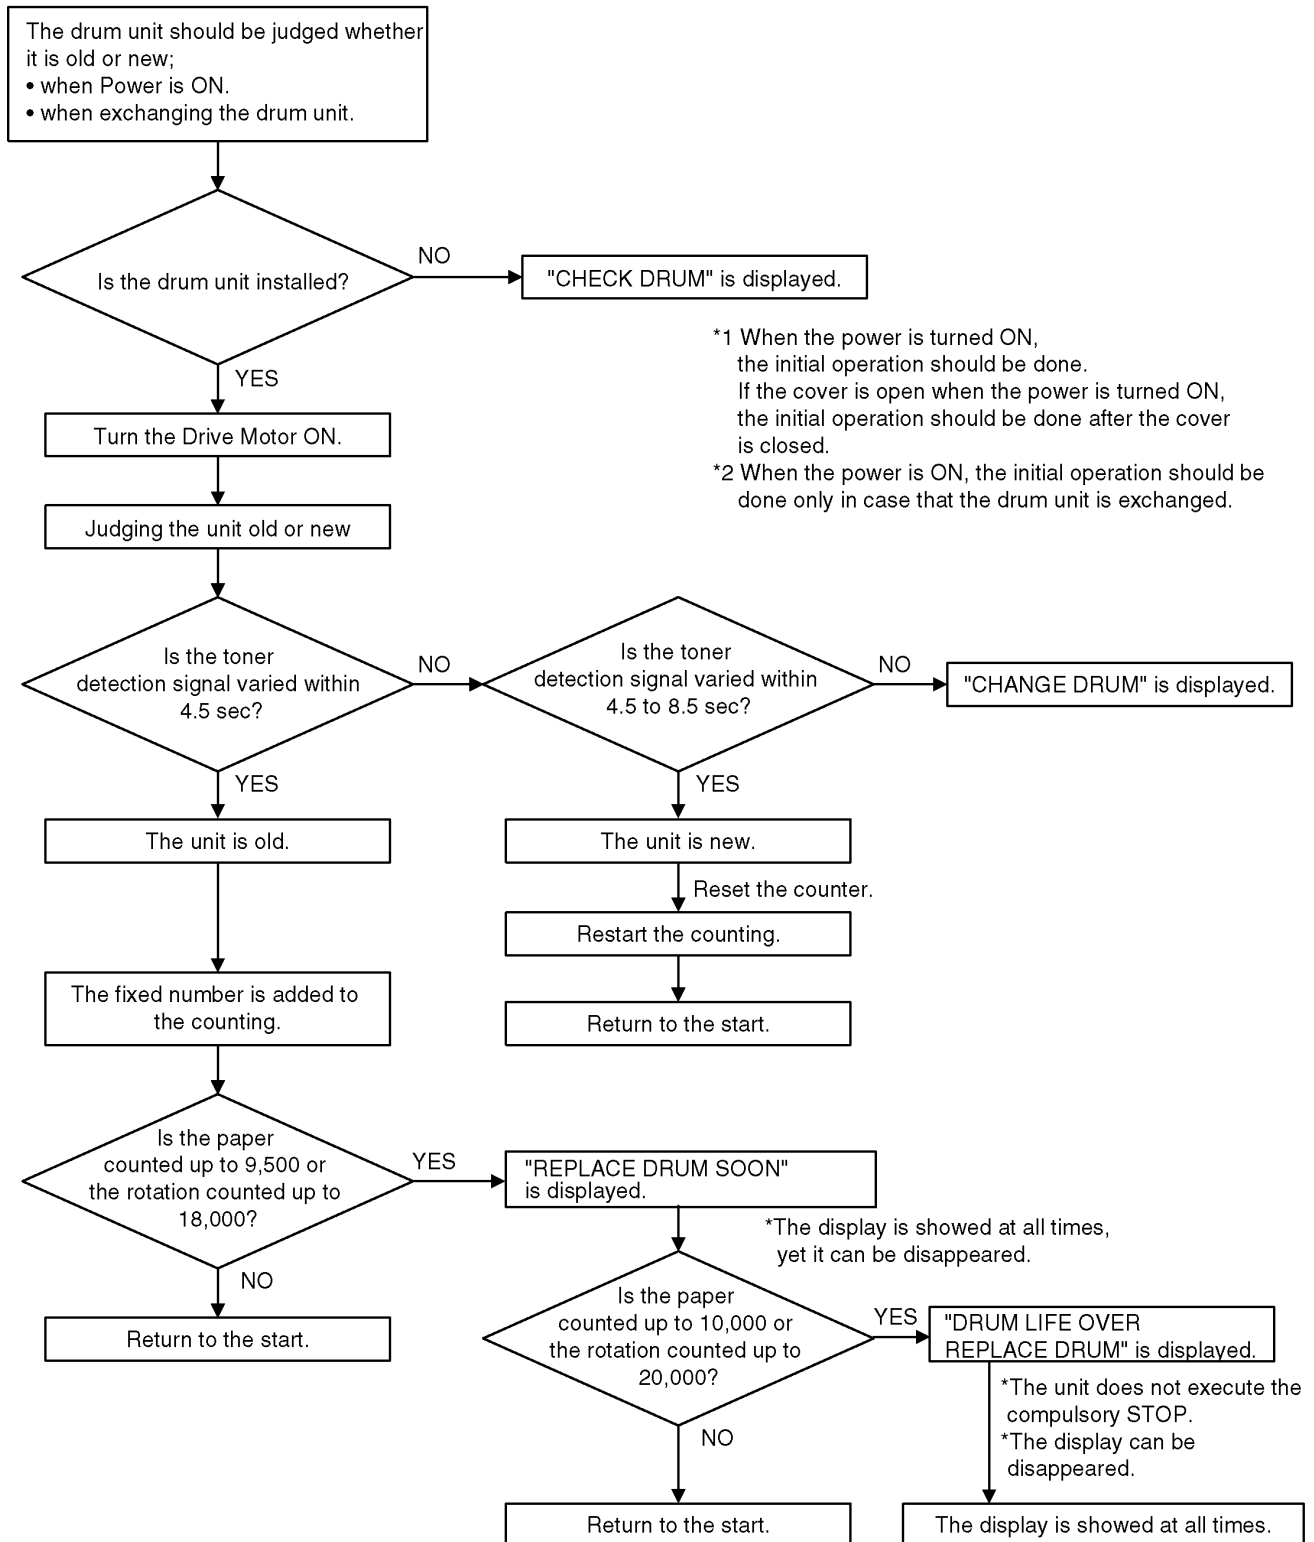

Fig. a

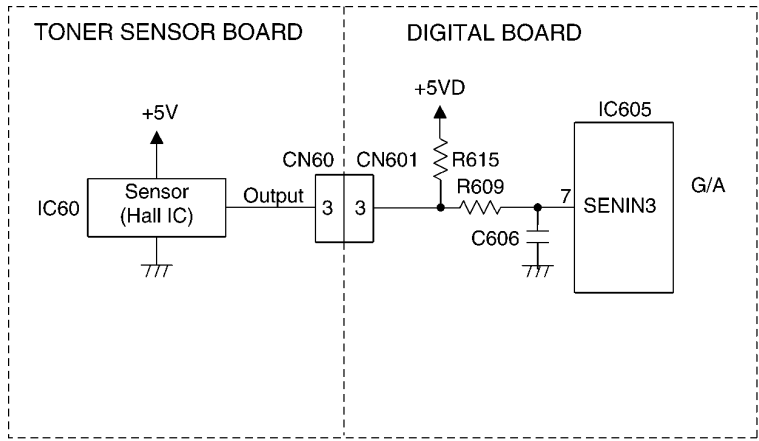

Detection Flowchart

### 7.11.10. TONER SENSOR.... “TONER EMPTY”, “TONER LOW”, “CHANGE DRUM”

The Sensor detects whether or not the Drum unit and the toner are present.

When there is not Drum unit, Hall IC (IC60) turns off, and the input signal of IC605-7 pin (Digital P.C.B) becomes a High level over 9s. When the Developer unit is set, Hall IC (IC60) turns ON/OFF. If the time of IC605-7 pin's Low level is under 600ms, there is enough toner in Developer unit, if not, toner is near empty.

**1. Toner Full**

**2. Toner Low**

**3. In case the Mixing Paddle does not rotate**

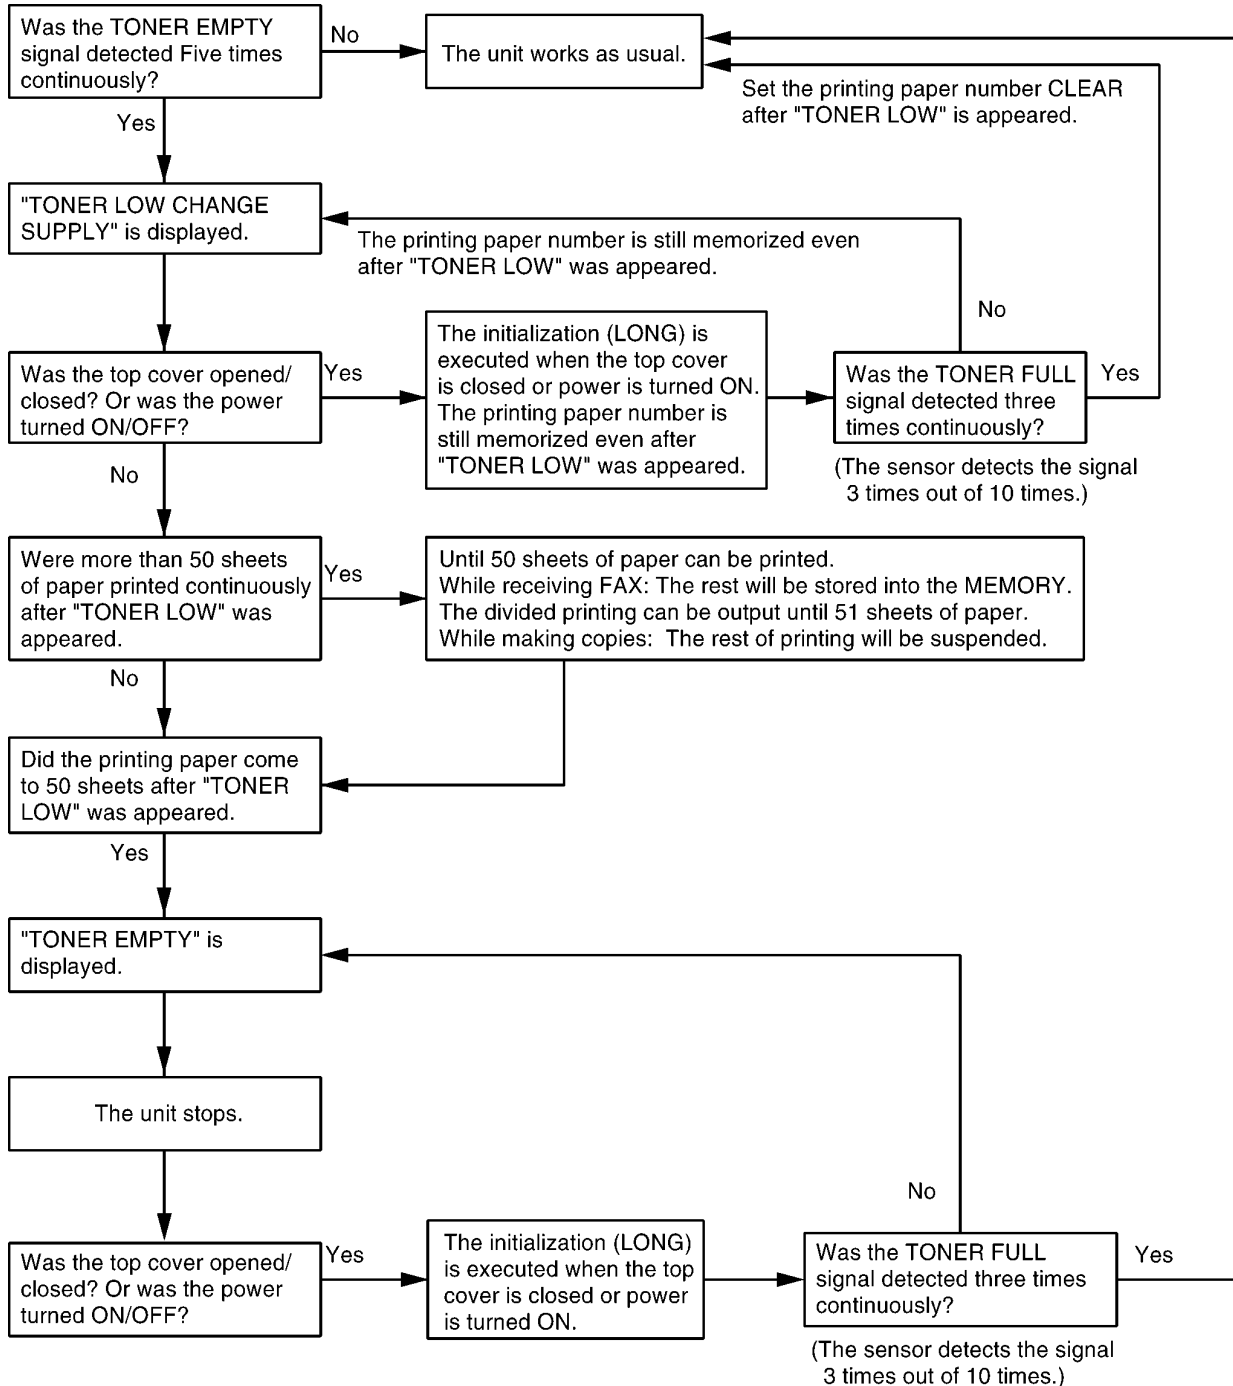

**Toner Sensor**

The rest of toner is detected by the move speed of the magnet put on the pendulum of Mixing Paddle. The pendulum is pushed up by the Mixing Paddle, then it falls down by its own weight. The rotation speed of paddle is set slower than the one of pendulum which falls down by its own weight. When the toner is still left, the pendulum falls and stops on the toner, then pushed by the paddle, it starts to rotate. When no toner is left, the pendulum falls to the bottom. Consequently the contact time between the magnet and steel becomes short when toner is left and long with no toner.

State	Display	Signal (IC605-7pin)
Toner Set (full)	-	Low level = about 0.3s
Near Empty Toner	TONER LOW	Low level>0.6s
Mixing Paddle does not rotate	CHANGE DRUM	High level fix or Low level fix

## 7.11.10.1. TONER DETECTION FLOW

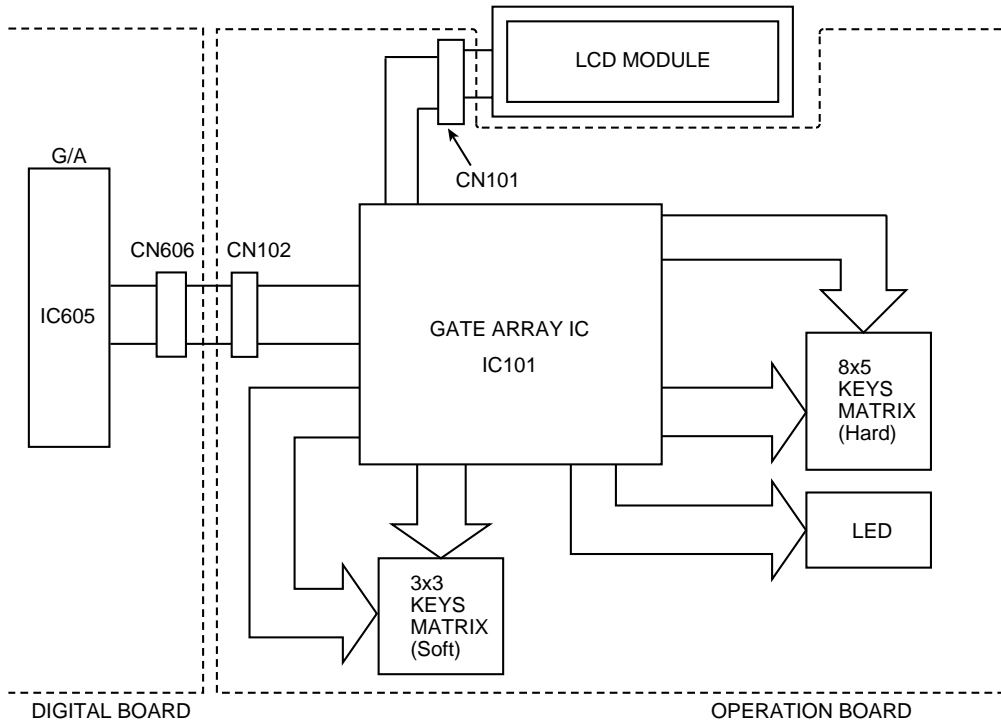

**CAUTION:**

1. Toner low can be judged by continuous 5-times TONER LOW signal at only printing.  
(It is not executed at.)
2. Toner full can be judged by continuous 3-times TONER FULL signal at initialization.  
(It is not executed at printing.)
3. In the ordinal operation, "CHECK DRUM" is displayed when TONER EMPTY sensor does not generate a signal for 2.7 seconds.

## 7.12. OPERATION BOARD SECTION

The unit consists of a LCD (Liquid crystal display), KEYS and LEDs (light-emitting diodes). They are controlled by the Gate Array (IC101) and Gate Array (IC605: on the DIGITAL BOARD).

The key matrix table is shown below.

### 1. Key Matrix

#### a. Hard Scan

	KIN0	KIN1	KIN2	KIN3	KIN4	KIN5	KIN6	KIN7
KSL0	AUTO ANSWER	CALLER IQ	NEXT	STOP	MENU	FLASH	H/S MUTE	REDIAL/PAUSE
KSL1	QUICK SCAN	S6	VOL-	CID-SEARCH	DIRECTORY/ PROGRAM	#	0	*
KSL2	COPY	-----	PREV	CID-PRINT	-----	9	8	7
KSL3	RESOLUTION	COLLATE	-----	S12	MONITOR	3	2	1
KSL4	FAX START	-----	VOL+	S11	HELP	6	5	4

\*LED7 should be set to KSL4. "8 x 5" key matrix is executed by hardware scanning.

#### b. Soft Scan

	SKIN0 (XLED8)	KIN1 (XLED12)	KIN2 (XLED11)
SKS0 (LED6)	S10	S7	S9
SKS1 (XLED9)	S4	S2	S3
SKS2 (XLED10)	S5	S1	S8

### 2. LED

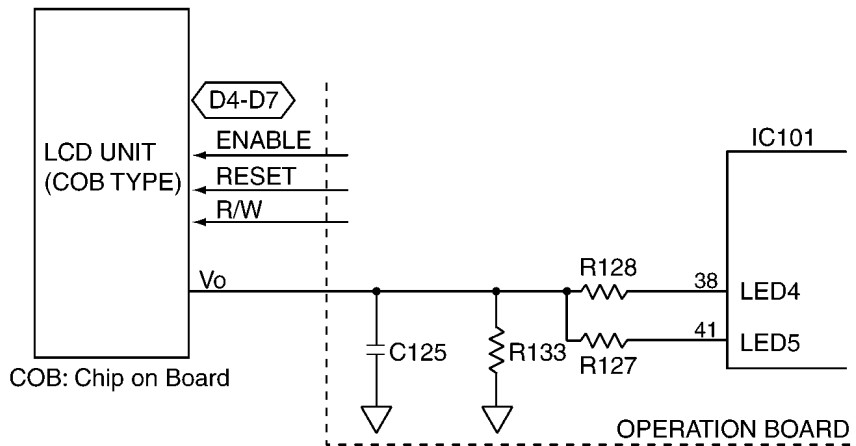

- AUTO ANSWER LED ON/OFF port---LED2
- CALLER IQ LED ON/OFF port---LED3

### 7.13. LCD SECTION

The Gate Array (IC101) works only for writing the ASCII code from the data bus (D4~D7). V0 is supplied for the crystal drive. R130 and R134 are density control resistors. Consequently, in this unit, the timing (positive clock) is generated by the LCD interface circuitry in the gate array (IC101).

#### Circuit Diagram

#### Timing Chart

<Density>

Display mode	User setting	LED4	LED5
2 LINE	NORMAL	H	L
	DARKER	L	L
Large	NORMAL	H	H
	DARKER	H	L

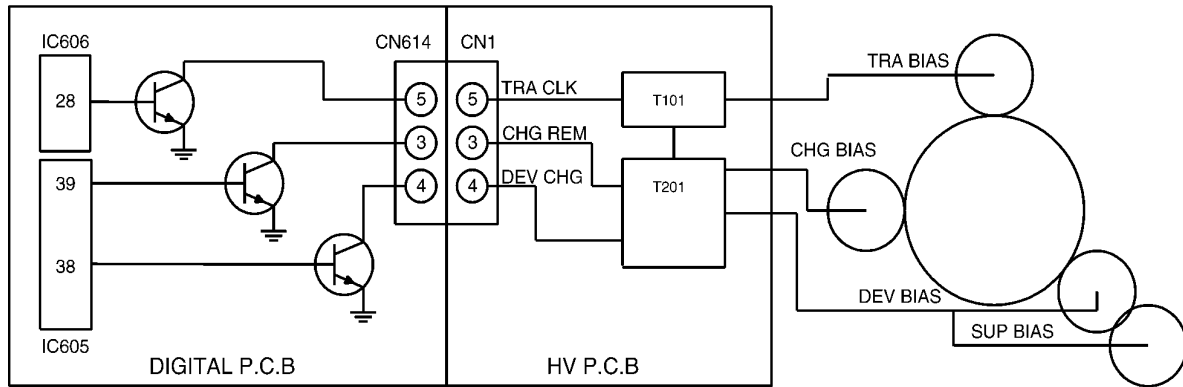

## 7.14. HVPS (High Voltage Power Supply) SECTION

### 7.14.1. HVPS SPECIFICATION

No	Output voltage	Item	Specification	Notes
1	Electrostatic Charge CHG BIAS	Rate output voltage	-1000±30V	
		Impedance range	50M~1000MΩ	
		Output format	Constant voltage	
2	Developing DEV(-) BIAS	Rate output voltage	-200±15V	
		Impedance range	10M~2000MΩ	
		Output format	Constant voltage	
	Developing DEV(+) BIAS	Rate output voltage	+150+20V	
		Output format	Constant voltage	
3	Transfer TRA(+) BIAS	Variable output current	+4~25μA	Output current varies with the rate printed.
		Output voltage	+3500V Max.	
		Output format	Variable Constant current	
	Transfer TRA(-) BIAS	Rate output voltage	-1000±100V	
		Output format	Constant voltage	

DEV BIAS is output from one of the output terminals after the DEV CHG signal selects DEV(+) BIAS and DEV(-) BIAS.  
 TRA BIAS is output from one of the output terminals after the TRA CLK signal selects TRA(+) BIAS and TRA(-) BIAS.

**H.V.P.S.(High Voltage Power Supply) Circuit Diagram**

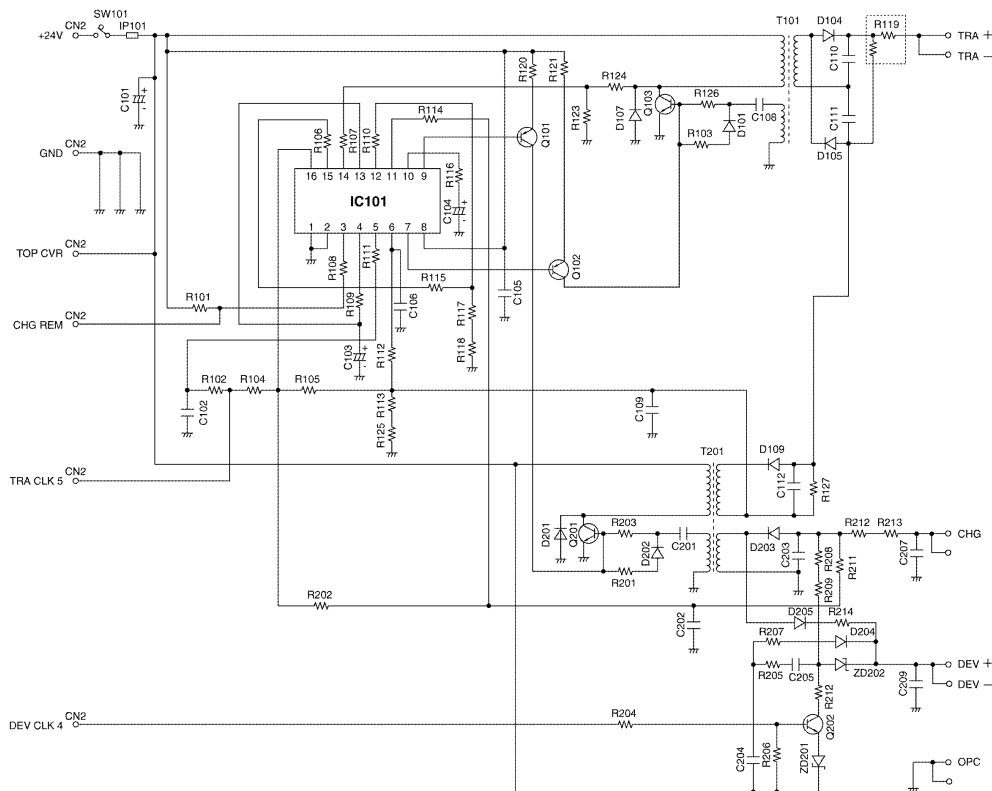

### 7.14.2. CHG-BIAS (Charge BIAS)/DEV(-) BIAS (Developing(-) BIAS)/DEV(+) BIAS (Developing(+) BIAS) UNIT

When the CHG REM terminal becomes "L", the transistor Q201 turns ON by IC101, Charge BIAS(-1000V) is output from CHG OUTPUT, Developing(-) BIAS(-200V) is output from DEV(-) BIAS. After that, when DEV CHG terminal becomes "L", Q202 turns ON, and Developing(+) BIAS(+150V) is output from DEV(+) BIAS.

### 7.14.3. TRA(+) BIAS (Transfer(+) BIAS)/TRA(-) BIAS (Transfer(-) BIAS) UNIT

When the CHG REM terminal is "L" and the TRA CLK terminal is "Open", Transfer(-) BIAS(-1000V) is output from TRA OUTPUT the moment Charge BIAS(-1000V) is output from CHG OUTPUT. When 7.8KHz PWM (pulse-width modulation) signal is input to the TRA CLK terminal, Q103 turns ON by IC101, and TRA(+) CURRENT BIAS according to the PWM signal is output from TRA OUTPUT. The PWM signal will be turned to a constant voltage by the resistor and the condenser, and input to the IC101. The IC101 compares this voltage with the feedback voltage from T101 and controls the Q103. As for the transfer current, +25 $\mu$ A is output when DUTY of the TRA CLK input signal is 0%, or +4 $\mu$ A is output when that is 72%.

Circuit Diagram

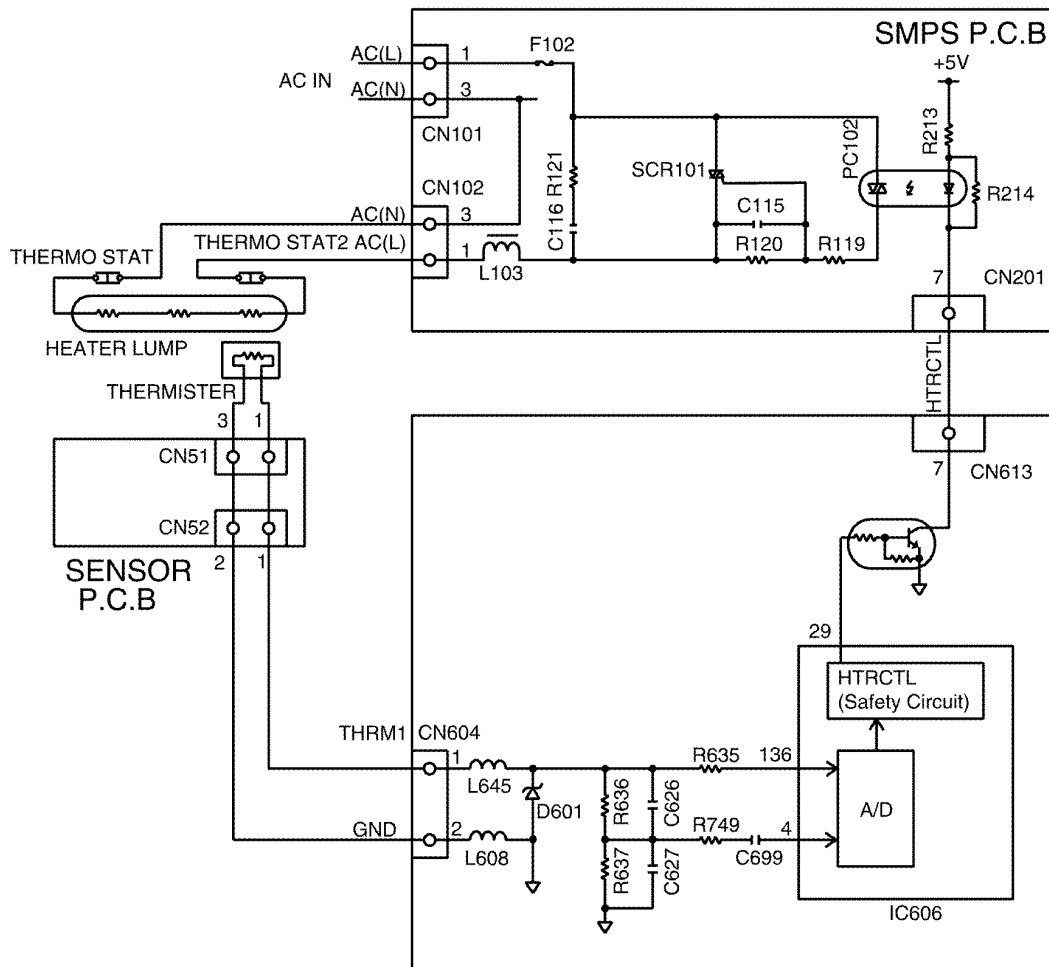

Transfer Current Variation by PWM Input

## 7.15. HEAT LAMP CONTROL CIRCUIT

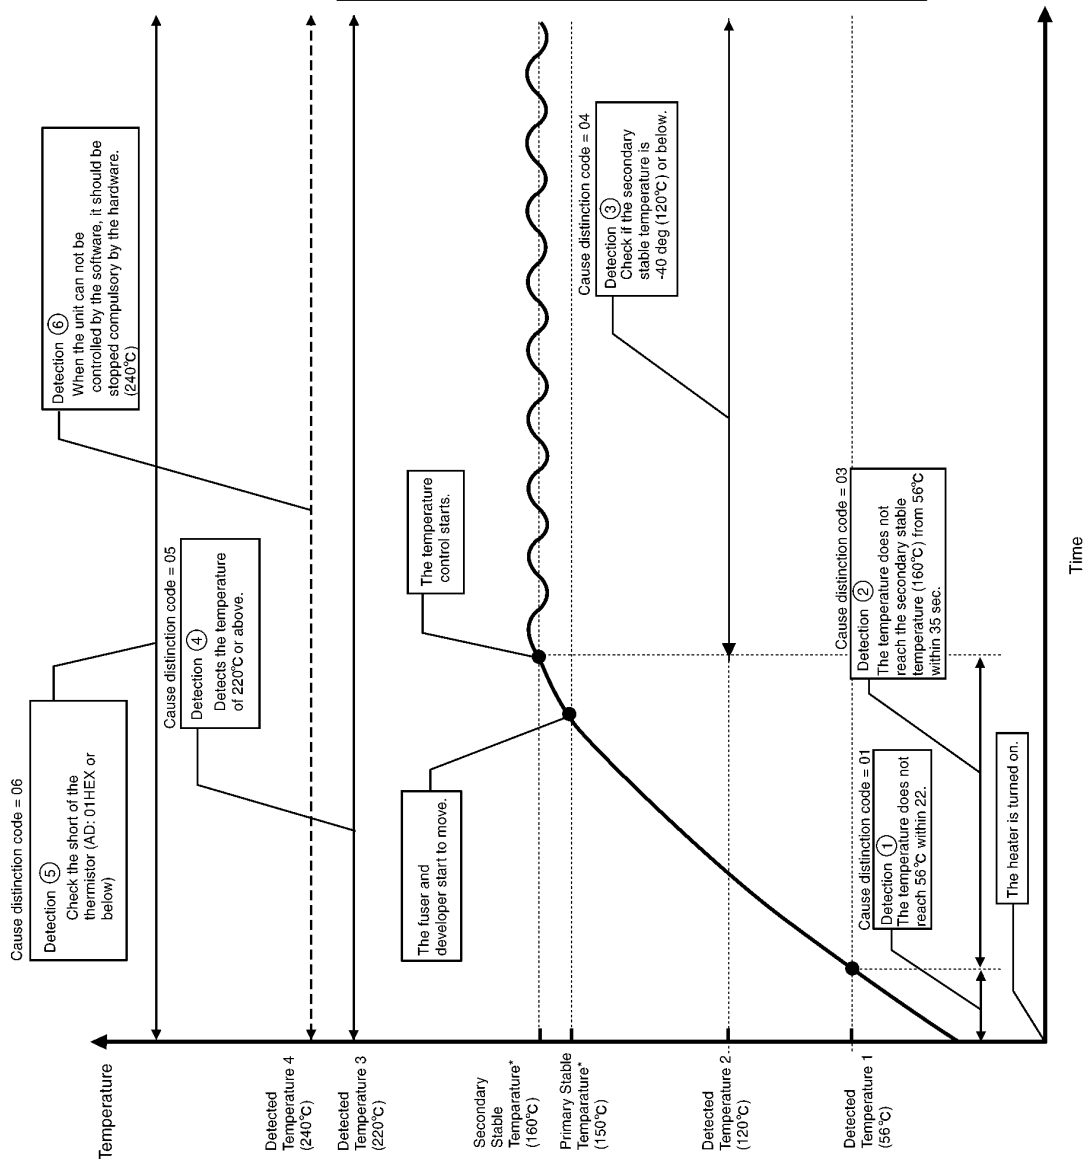

The temperature of the fixing part of the Fixing Unit is converted to a voltage by THERMISTOR and input to IC606-4pin. The heater turns ON/OFF the photo-coupler PC102 at the heater control port (IC606-29pin), and is turned ON/OFF at the triac SCR101. And two thermostats are set on the AC line as the safety devices.

Circuit Diagram

### 1. Control at Printing

- After the printing signal is received, turn ON the heater.
- After that, turn ON the motor at the Primary Stable Temperature (150°C).
- After that, control at the Secondary Stable temperature (160°C), and feed papers.

When one of the followings happened, the process against a failure is executed and the unit goes to "CALL SERVICE 3".

[Low temperature detection]  
 Detection ① : When the temperature does not reach 56 °C within 22 sec after the heater is turned ON.  
 Detection ② : When the temperature does not reach the secondary stable temperature (160 °C) from 56 °C within 35 sec.  
 Detection ③ : When the temperature went under the secondary stable temperature -40 deg (120 °C) by the temperature control after it reached the secondary stable temperature (160 °C) .

[High temperature detection]  
 Detection ④ : When the temperature became 220 °C or above during printing.  
 Detection ⑤ : When the short of the thermistor (AD: 01HEX or below) is detected during printing.  
 Detection ⑥ : When the unit can not be controlled by the software, it should be stopped compulsorily by the hardware. (240 °C) .  
 Detection ⑦ : When the temperature of the thermostat reached 135°C.

2. Safety Protection

a. 2 thermostats are provided with the unit, and the heater circuit is shut down when their surface temperatures became over

135°C.

- b. The heater control circuit of IC606 has the built-in function that the software turns off the heater control automatically if the heater is not turned ON every a fixed time.
- c. When the temperature became over 240°C, the heater control circuit of IC606 is turned off forcedly and system reset (IC606 pin 20 becomes Low) will be executed.

## 7.16. POWER SUPPLY BOARD SECTION

This power supply board uses the switching regulator method.

### [Input Circuit]

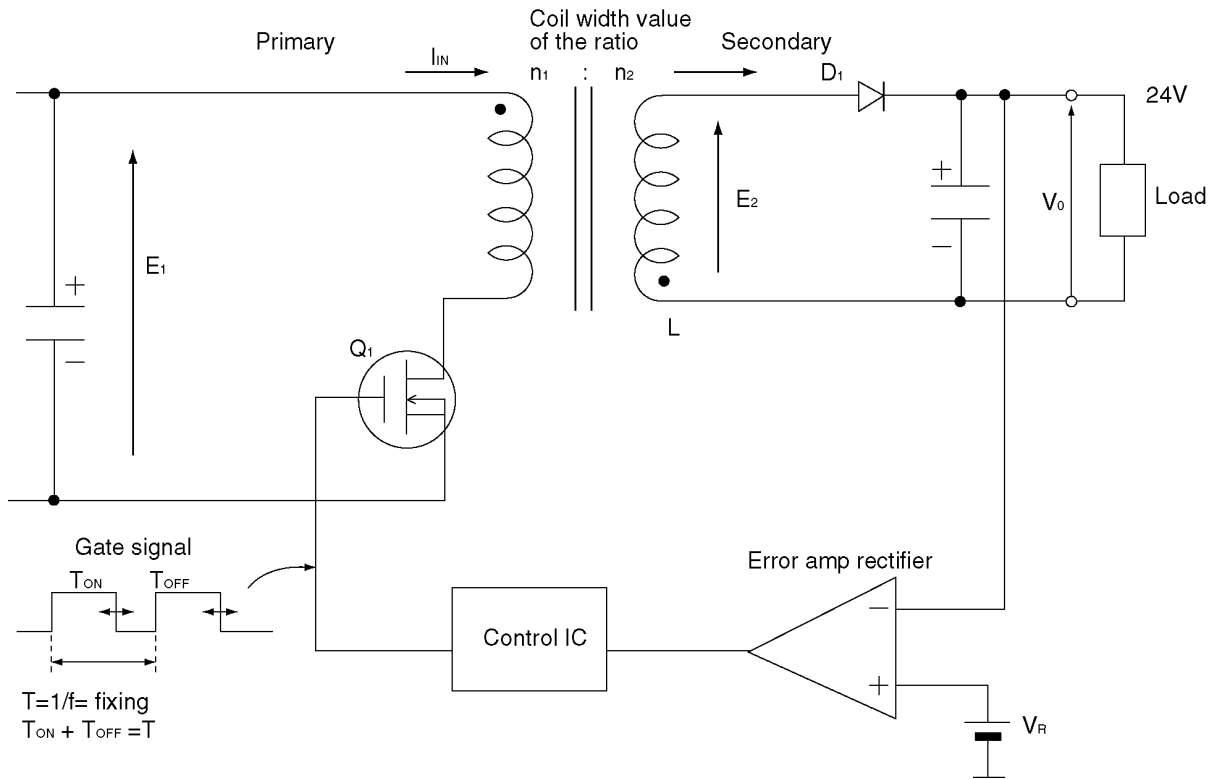

The input current goes into the input rectifier circuit through the filter circuit. The filter circuit decreases the noise voltage and the noise electric field strength.

### [Rectifier Circuit]

The input current is rectified by D101~ D104 and charges C106 to make DC voltage. Then it supplies power to the converter circuit.

### [Kick-on voltage circuit]

Bias is applied to the Q101 gate via this circuit when the AC power is turned on and Q101 begins operating.

The following is an overview of how the power supply unit is controlled.  
 The control method of this power supply unit is pulse width modulation.

When Q<sub>1</sub> is ON, the energy is charged in the transfer primary coil according to E<sub>1</sub>. When Q<sub>1</sub> is OFF, the energy is output from the secondary transfer as follows.

L → D<sub>1</sub> → Load → L

Then the power is supplied to the Load. When Q<sub>1</sub> is ON, power is not output from the secondary side. The output voltage is fed back in the control IC according to the error amp rectifier. Then depending on how T<sub>ON</sub> is controlled, stabilization occurs. Also, when the current load becomes too large, in order to decrease the voltage output, the increase in  $\tau$  is controlled and the output voltage is stabilized.

Therefore, basically the timing: Ton/Toff of Q1 controls the output voltage.

Output/Input voltage value of ratio

**[Surge Absorber Circuit]**

This circuit is for absorbing surge voltage generated by the transformer.

**[Control Circuit and Detecting Circuit]**

The control circuit amplifies the output with increased voltage detected in the error detecting circuit. Then it drives the main transistor.

In this power supply, the duty ratio is defined by changing the ON period of the main transistor.

This is shown as follows.

When the output voltage of the 24V circuit increases, the current of the photo coupler PC101 increases, the pulse width of the output control IC becomes narrower and the ON period of Q101 becomes shorter.

**[Over Current Limiter (O.C.L.)]**

The highest drain current (Q101) is limited by a limiter circuit (IC101) of 24V. The 24V output is limited by this circuit.

**[Over Voltage Circuit]**

If the 24V output increases because the error detecting circuit or control circuit is broken, IC101 will recognize this signal and output becomes 0V.

**Dummy load method (to quickly check the power supply output)**

Refer to **POWER SUPPLY BOARD SECTION** (P.144).

## 8 REFERENCE MATERIALS DATA

### 8.1. PRINTING OPERATION PRINCIPLE

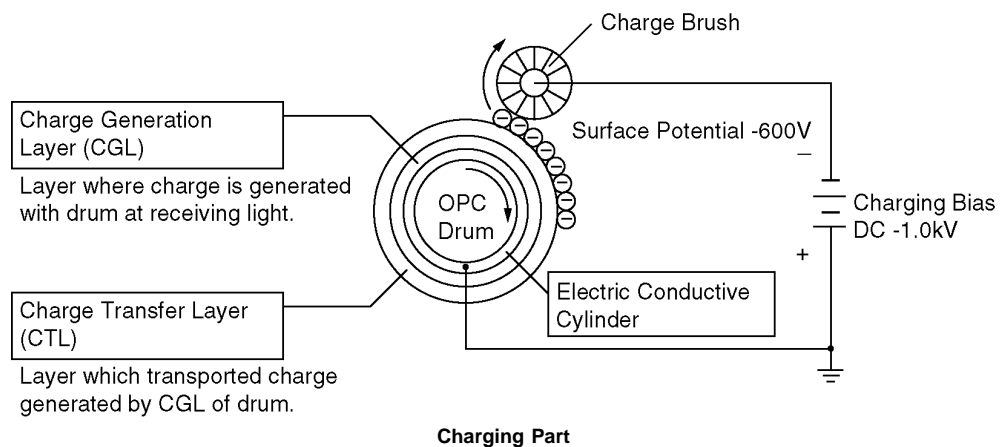

#### 8.1.1. PROCESS CHART AND PROCESS BIAS

#### 8.1.2. CHARGING

Charging is the stage that keeps the surface of the sensitive drum a fixed electric potential. The sensitive drum is the Organic Photo Conductor (OPC), which is a electric conductive cylinder whose surface is covered with the Charge Generation Layer (CGL) and Charge Transfer Layer (CTL).

When the charging bias (DC -1.0 KV) is added and the minus charge is supplied to the charge brush while charging, the whole surface potential of the drum is -600V.

### 8.1.3. EXPOSING

When the drum which is charged with the fixed electric charge is irradiated by the laser beam, the plus charge and minus charge are generated at the Charge Generation Layer. Passing through the Charge Transfer Layer which conducts the plus charge, the minus-charged drum's surface is neutralized to be skipped. Then the minus charge goes to the ground from the electric conductive cylinder. Consequently the charge of the part which is not exposed remains as it is, and the electric potential of the scanned part changes.

At that time an invisible image is created on the drum.

### 8.1.4. LASER SCANNING UNIT LOCATIONS

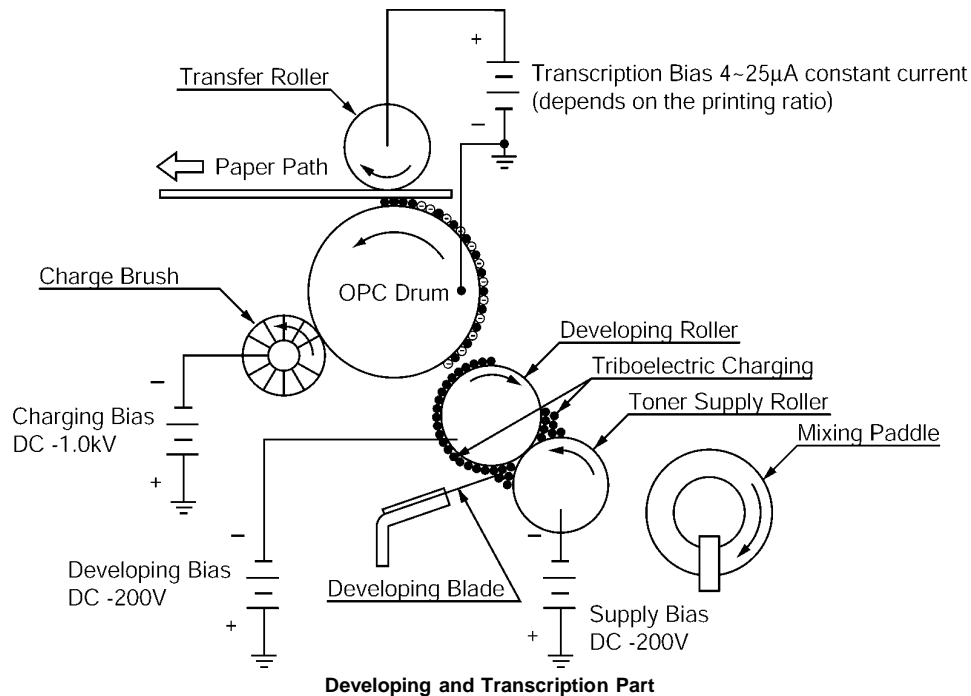

Parts Name	Parts Name
1 Laser Diode	8 Frame
2 Collimator Lens	9 Cover
3 Cylindrical Lens	10 Cover Glass
4 Polygon Motor Unit	11 LD Harness
5 f θ Lens	12 Motor Harness
6 LD Driving Circuit	13 Sponge
7 Pin Photodiode	

### 8.1.5. DEVELOPING AND TRANSCRIPTION

The developing is the stage that the OPC drum with an invisible image is changed to visible by the toner. The developer consists of mixing paddle, toner supply roller, developing roller, developing blade and OPC drum. The bias voltage is added to the developing roller (DC -200V) and toner supply roller (DC -200V). Firstly the toner is mixed up in the mixing paddle and minus-charged by triboelectricity, then led to the toner supply roller. Secondly the potential difference causes to send the toner to the developing roller from the toner supply roller. The supplied toner to the developing roller is kept to a certain layer thickness by the developing blade and also it is charged by triboelectricity. Consequently the toner is transferred to the surface of the exposed OPC drum by the potential difference between the developing roller and OPC drum's surface.

The transfer is the stage that the created image on the OPC drum is transferred to the paper. When the transfer roller is plus-charged with the image, the minus-charged toner particles are gathered on the surface of the drum and transferred to the paper.

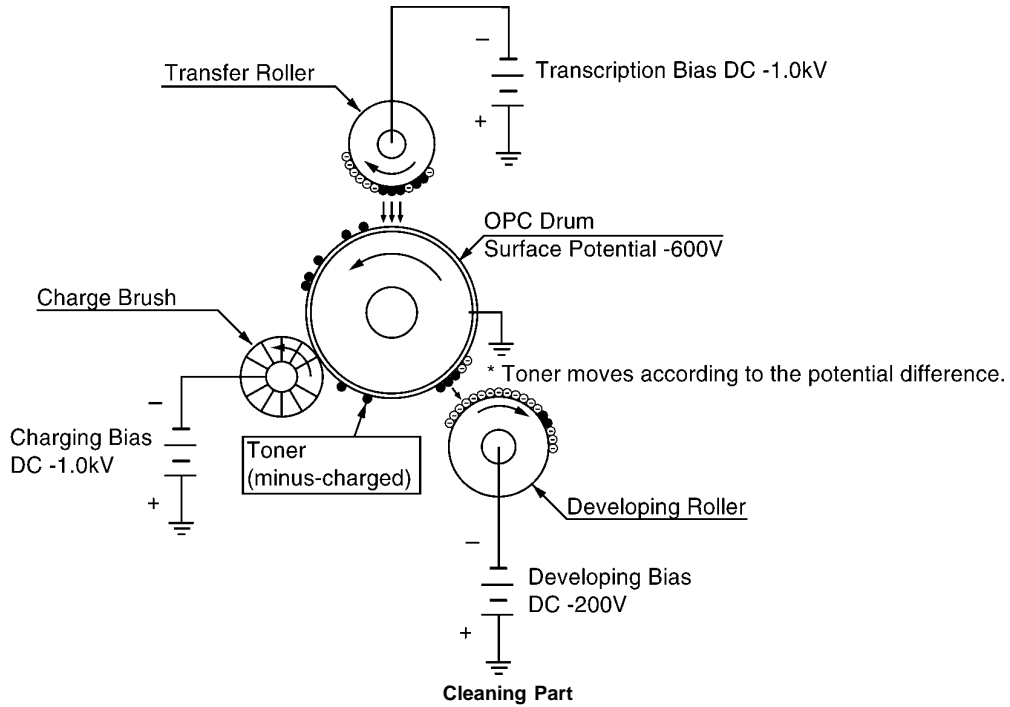

The values of developing bias and supply bias are different from the ones described in the Service Manual for FL501.

The biases output from the unit of FL501,FLM551 and FLB751 (FLB750) have the same voltage. However, the developing device of FA78X(FA78A) converts the developing and supply biases inside the developing device to improve the image quality.

	FA77X(FA77A) developing device	FA78X(FA78A) developing device	FA84X(FA84A/FA84E) developing device
Developing bias	-350V	-180V	-200V
Supply bias	-550V	-350V	-200V

### 8.1.6. CLEANING

The toner attached to the surface of the OPC drum is transferred to the paper at the transcription stage, but a part of the toner remains. The cleaning is the stage that cleans the remain toner after the transcription stage. The remain toner on the drum and the toner which was attached to the place where the laser beam didn't scan are gathered to the developing roller to be used again. When no paper is supplied, the transfer roller is minus-charged to eliminate the minus-charged toner.

### 8.1.7. FIXING

On the process of the transfer, the transferred toner is weakly attached on the paper. Fixing means the process to fix the toner on the paper permanently. The fixing part melts the toner at the high temperature using the halogen heater. The toner is fixed on the paper by the heat and pressure through the fixing part with the image. The surface of the heat roller is resined by Teflon and lubricated to prevent from attaching the toners. The press roller is made of silicon, and its spring compresses the melted toner.

The fixing part becomes high temperature, so the thermistor and the thermal fuse are provided.

#### 1. Thermistor

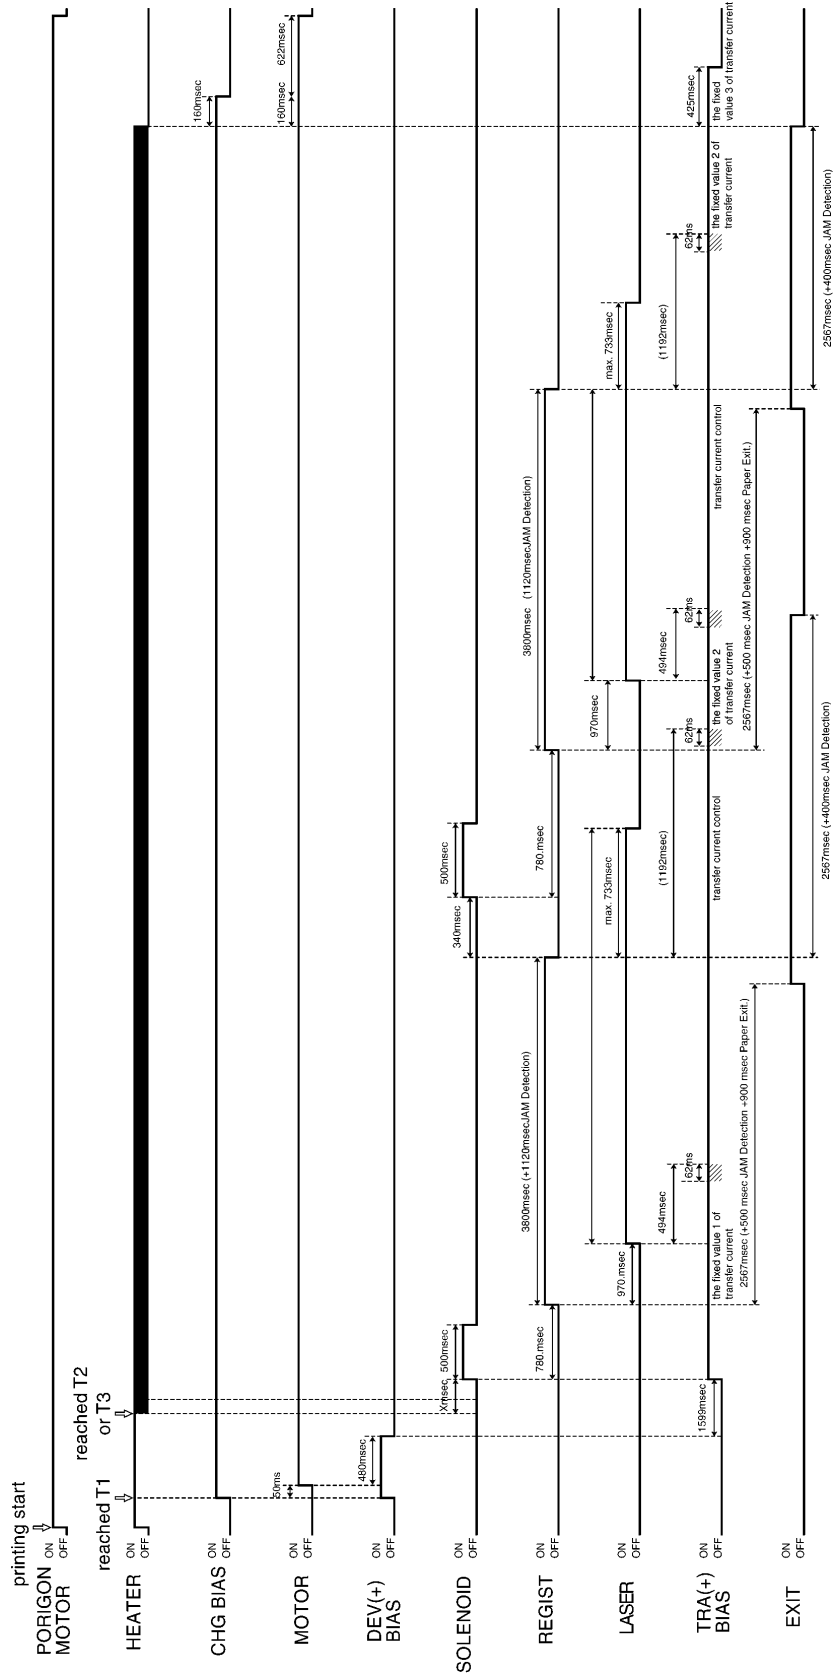

The thermistor touches the heat roller and check the temperature to feed back to the control circuit. The surface temperature should be kept 160 °C while printing.

#### 2. Thermostat

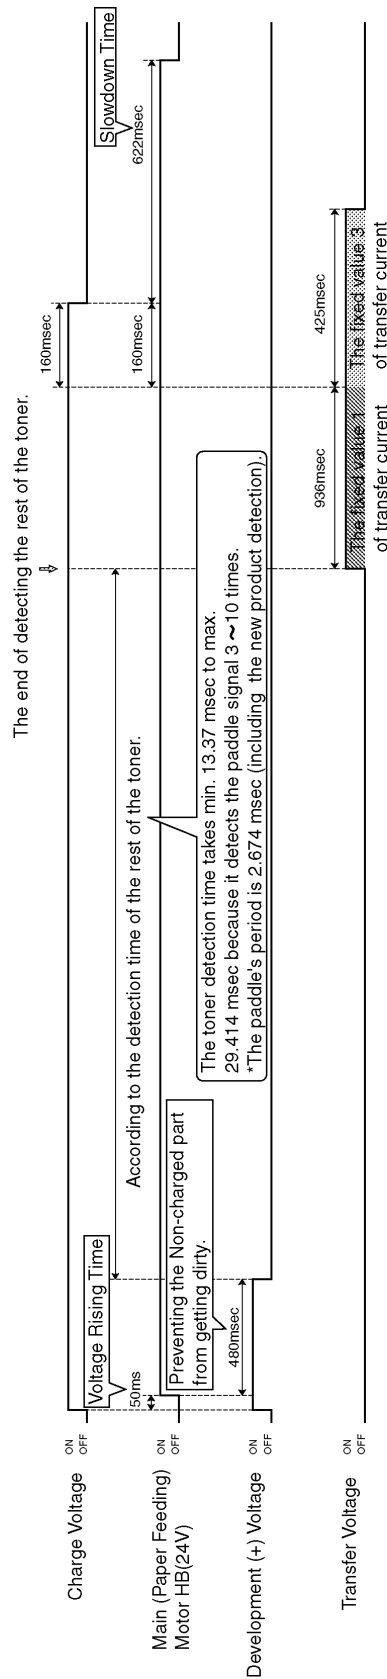

The thermostat takes the same role with the thermal fuse. The thermostat is located near the heat roller, and it turns OFF the power when the temperature around the thermostat becomes over 135°C.

### 8.1.8. TIMING CHART (When Printing Two Sheets of Paper) BASIC

### 8.1.9. Timing Chart [Initializing (Long)]

**Long Initialization**

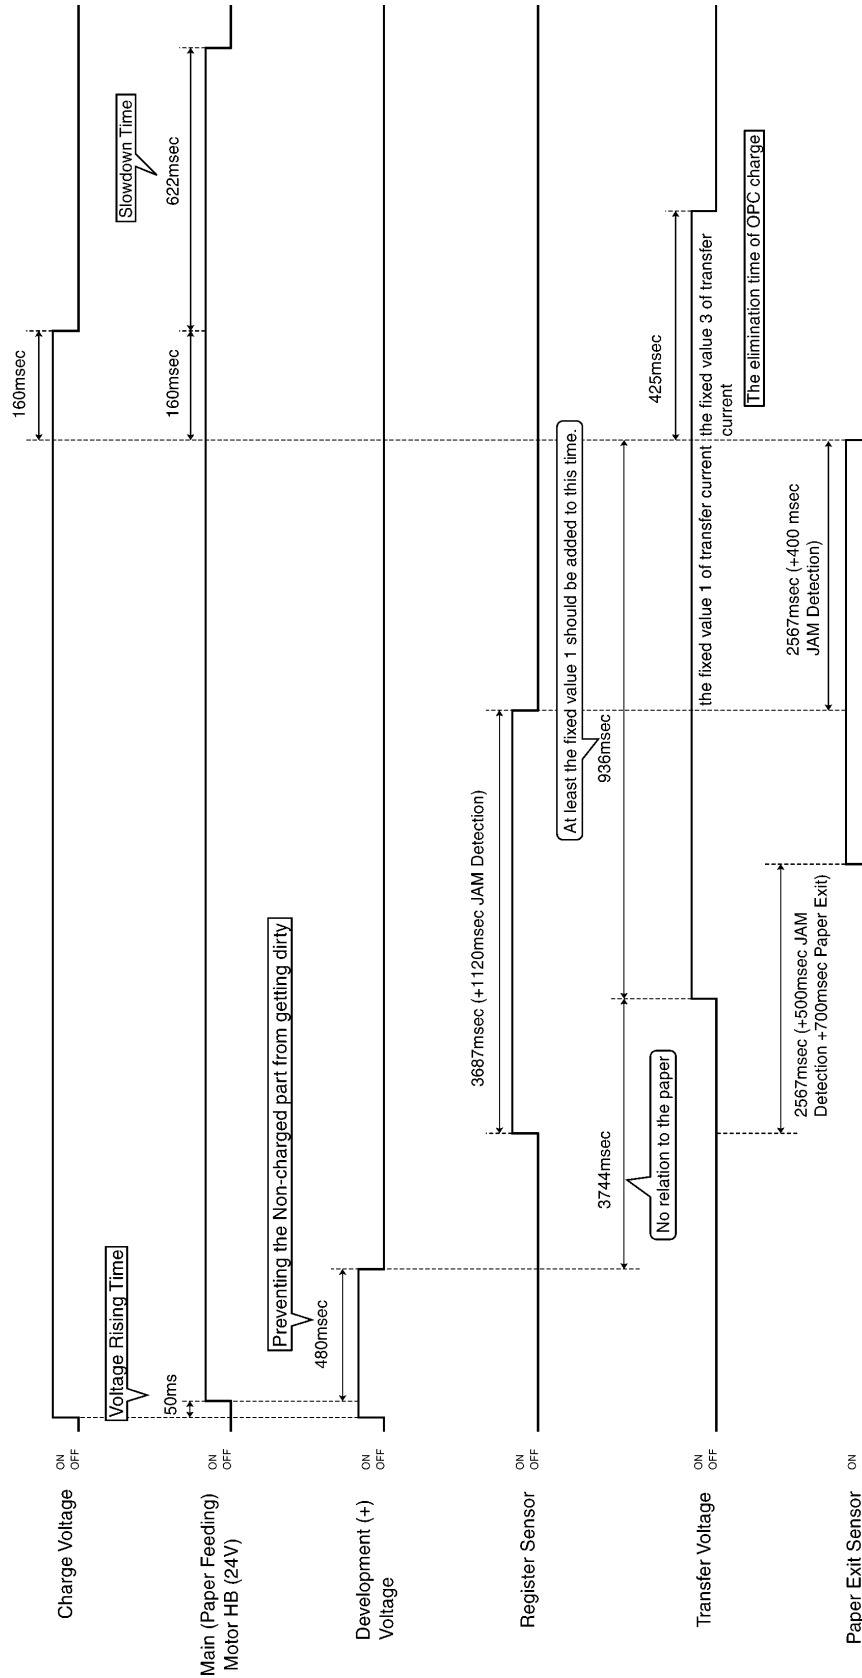

- When the cover is closed after power is turned ON or when the power is turned ON with the cover closed.
- When the developer is removed. (When the cover is closed after the developer is removed.
- When the cover is closed after the toner becomes LOW.
- When the cover is closed after the Jam is released.
- After FAILED PICK UP is released. (The initialization of the pick up roller position
- Aging: Once/day

\* In case that the abnormal paddle signal is detected during initialization, the motor is forced to stop without completion processing.

on the other hand when it is detected during printing the process will be completed as usual.

To prevent the unit from being destructed by the OPC transfer voltage

### 8.1.10. Timing Chart (when the registration sensor is turned OFF then ON during initializing)

## 8.3. HOW TO REPLACE THE FLAT PACKAGE IC

Even if you do not have the special tools (for example, a spot heater) to remove the Flat IC, with some solder (large amount), a soldering iron and a cutter knife, you can easily remove the ICs that have more than 100 pins.

### 8.3.1. PREPARATION

#### 8.3.1.1. For Power Supply Board

- SOLDER

Sparkle Solder 115A-1, 115B-1 OR Almit Solder KR-19, KR-19RMA

- Soldering iron

Recommended power consumption is between 30 W to 40 W.

Temperature of Copper Rod  $662 \pm 50^{\circ}\text{F}$  ( $350 \pm 10^{\circ}\text{C}$ )

(An expert may handle a 60~80 W iron, but a beginner might damage the foil by overheating.)

- Flux

HI115 Specific gravity 0.863

(Original flux should be replaced daily.)

#### 8.3.1.2. For P.C.Board with "PbF" marking

- PbF (: Pb free) Solder

- Soldering Iron

Tip Temperature of  $700^{\circ}\text{F} \pm 20^{\circ}\text{F}$  ( $370^{\circ}\text{C} \pm 10^{\circ}\text{C}$ )

**Note:** We recommend a 30 to 40 Watt soldering iron. An expert may be able to use a 60 to 80 Watt iron where someone with less experience could overheat and damage the PCB foil.

- Flux

Recommended Flux: Specific Gravity  $\rightarrow 0.82$ .

Type  $\rightarrow$  RMA (lower residue, non-cleaning type)

**Note:** See **ABOUT LEAD FREE SOLDER (PbF: Pb free)** (P.4).

### 8.3.2. FLAT PACKAGE IC REMOVAL PROCEDURE

1. Put plenty of solder on the IC pins so that the pins can be completely covered.

**Note:**

If the IC pins are not soldered enough, you may give pressure to the P.C. board when cutting the pins with a cutter.

2. Make a few cuts into the joint (between the IC and its pins) first and then cut off the pins thoroughly.

3. While the solder melts, remove it together with the IC pins.

When you attach a new IC to the board, remove all solder left on the land with some tools like a soldering wire. If some solder is left at the joint on the board, the new IC will not be attached properly.

### 8.3.3. FLAT PACKAGE IC INSTALLATION PROCEDURE

1. Temporarily fix the FLAT PACKAGE IC, soldering the two marked pins.

\*Check the accuracy of the IC setting with the corresponding soldering foil.

2. Apply flux to all pins of the FLAT PACKAGE IC.

3. Solder the pins, sliding the soldering iron in the direction of the arrow.

### 8.3.4. BRIDGE MODIFICATION PROCEDURE

1. Lightly resolder the bridged portion.
2. Remove the remaining solder along the pins using a soldering iron as shown in the figure below.

## 8.4. DIGITAL BOARD SECTION

When the unit fails to boot up the system, take the troubleshooting procedures very carefully. It may have a serious problem.

The symptom: No response when the power is turned on. (No LCD display, and keys are not accepted.)

The first step is to check the power source. If there is no problem with the power supply unit, the problem may lie in the digital unit (main board).

As there are many potential causes in this case (ASIC, DRAM, etc.), it may be difficult to specify what you should check first. If a mistake is made in the order of checks, a normal part may be determined faulty, wasting both time and money.

Although the tendency is to regard the problem as a serious one (IC malfunction, etc.), usually most cases are caused by solder faults (poor contact due to a tunnel in the solder, signal short circuit due to solder waste).

### Note:

1. Electrical continuity may have existed at the factory check, but a faulty contact occurred as a result of vibration, etc., during transport.
2. Solder waste remaining on the board may get caught under the IC during transport, causing a short circuit.

Before we begin mass production, several hundred trial units are produced at the plant, various tests are applied and any malfunctions are analyzed. (In past experiences, digital IC (especially, DRAM and ROM) malfunctions are extremely rare after installation in the product.)

This may be repaired by replacing the IC, (DRAM etc.). However, the real cause may not have been an IC malfunction but a soldering fault instead.

Soldering faults difficult to detect with the naked eye are common, particularly for ASIC and RA (Resistor Array). But if you have an oscilloscope, you can easily determine the problem site or IC malfunction by checking the main signal lines.

Even if you don't have such a measuring instrument, by checking each main signal line and resoldering it, in many cases the problem will be resolved.

An explanation of the main signals (for booting up the unit) is presented below.

Don't replace ICs or stop repairing until checking the signal lines.  
An IC malfunction rarely occurs. (By understanding the necessary signals for booting up the unit, the "Not Boot up" display is not a serious problem.)

What are the main signals for booting up the unit?

Please refer to **DIGITAL BLOCK DIAGRAM** (P.150).

The ASIC (IC606) controls all the other digital ICs. When the power is turned on, the ASIC retrieves the operation code stored in the ROM (IC607), then follows the instructions for controlling each IC. All ICs have some inner registers that are assigned to a certain address.

It is the address bus by which the ASIC designates the location inside each IC. And the data bus reads or writes the data in order to transmit the instructions from the ASIC to the ICs.

These signal lines are all controlled by voltages of 3.3V (H) or 0V (L).

### 8.4.1. NG EXAMPLE

1.

Short circuit from the adjacent signal wires.  
Check for a short circuit in the RA and IC leads and the signal wire at the through hole.

2.

Short between the signal line and GND.

3.

Solder fault on RA.

## 8.5. MODEM SECTION

### 8.5.1. FUNCTION

The unit uses MODEM (IC600) that serves as an interface between the control section for FAX transmission and reception and the telephone line. During a transmitting operation, the digital image signals are modulated and sent to the telephone line.

During a receiving operation, the analog image signals which are received via the telephone line are demodulated and converted into digital image signals. The communication format and procedures for FAX communication are standardized by ITU-T. MODEM has hardware which sends and detects all of the necessary signals for FAX communication.

It can be controlled by writing commands from the ASIC (IC606: inside ASIC).

This MODEM also sends DTMF signals, generates a call tone (from the speaker), and detects a busy tone and dial tones.

Overview of Facsimile Communication Procedures (ITU-T Recommendation):

#### 1. ON CCITT (International Telegraph and Telephone Consultative Committee)

The No. XIV Group of ITU-T, one of the four permanent organizations of the International Telecommunications Union (ITU), investigates and make recommendations on international standards for facsimiles.

#### 2. Definition of Each Group

- Group I (G1)

Official A-4 size documents without using formats which reduce the band width of a signal are sent over telephone lines. Determined in 1968.

Transmission for about 6 minutes at a scanning line density of 3.85 lines/mm.

- Group II (G2)

Using reduction technology in the modulation/demodulation format, an A-4 size document is sent at an official scanning line density of 3.85 lines/mm for about 3 minutes.

Methods to suppress redundancy are not used.

Determined in 1976.

- Group III (G3)

Method of suppressing redundancy in the image signal prior to modulation is used. An A-4 size document is sent within about one minute.

Determined in 1980.

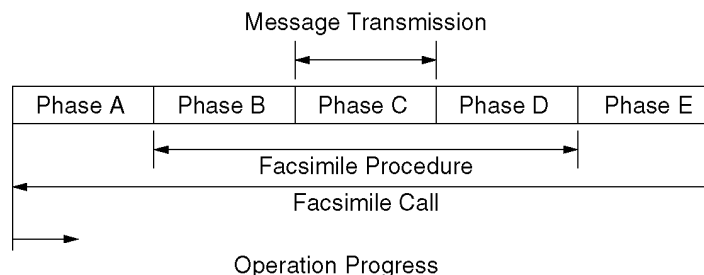

- Group IV (G4)

Transmission is via the data network. A method is provided for suppressing redundancy in signals prior to transmission, and error-free reception of transmission is possible.

The scope of these facsimile applications is not limited simply to transmission of written statements. Through symbiotic linkages with other communication methods, it can be expected to expand to include integrated services.

#### 3. Facsimile Call Time Series

As shown in the following diagram, the facsimile call time series is divided into five phases.

#### Phase A : Call setting

Call setting can be manual/automatic.

#### Phase B : Pre-message procedure

Phase B is a pre-processing procedure and sequence for confirming the status of the terminal, transmission route, etc., and for terminal control. It implements terminal preparation status, determines and displays terminal constants, confirms synchronization status, etc. and prepares for transmission of facsimile messages.

#### Phase C : Message transmission

Phase C is the procedure for the transmitting facsimile messages.

**Phase D** : Post message procedure

Phase D is the procedure for confirming that the message is completed and received. For continuous transmission, phase B or phase C is repeated for transmission.

**Phase E** : Call retrieval

Phase E is the procedure for call retrieval, that is for circuit disconnection.

#### 4. Concerning Transmission Time

$$\boxed{\text{Transmission Time}} = \boxed{\text{Control Time}} + \boxed{\text{Image Transmission Time}} + \boxed{\text{Hold Time}}$$

Transmission time consists of the following.

##### Control time:

This is time at the start of transmission when the functions at the sending and receiving sides are confirmed, the transmission mode is established, and transmission and reception are synchronized.

##### Image transmission time:

This is the time required for the transmission of document contents (image data). In general, this time is recorded in the catalog, etc.

##### Hold time:

This is the time required after the document contents have been sent to confirm that the document was actually sent, and to check for telephone reservations and/or the existence of continuous transmission.

#### 5. Facsimile Standards

Item	Telephone Network Facsimile
	G3 Machine
Connection Control Mode	Telephone Network Signal Mode
Terminal Control Mode	T. 30 Binary
Facsimile Signal Format	Digital
Modulation Mode	PSK (V. 27 ter) or QAM (V. 29)
Transmission Speed	300 bps (Control Signal) 2400, 4800, 7200, 9600, 12000, 14400 bps (FAX Signal)
Redundancy Compression Process (Coding Mode)	1 dimension: MH Mode 2 dimension: MR Mode (K=2.4)
Resolution	Main Scan: 8 pel/mm Sub Scan: 3.85, 7.7l/mm
Line Synchronization Signal	EOL Signal
1 Line Transmission Time [ms/line]	Depends on the degree of data reduction. Minimum Value: 10, 20 Can be recognized in 40ms.

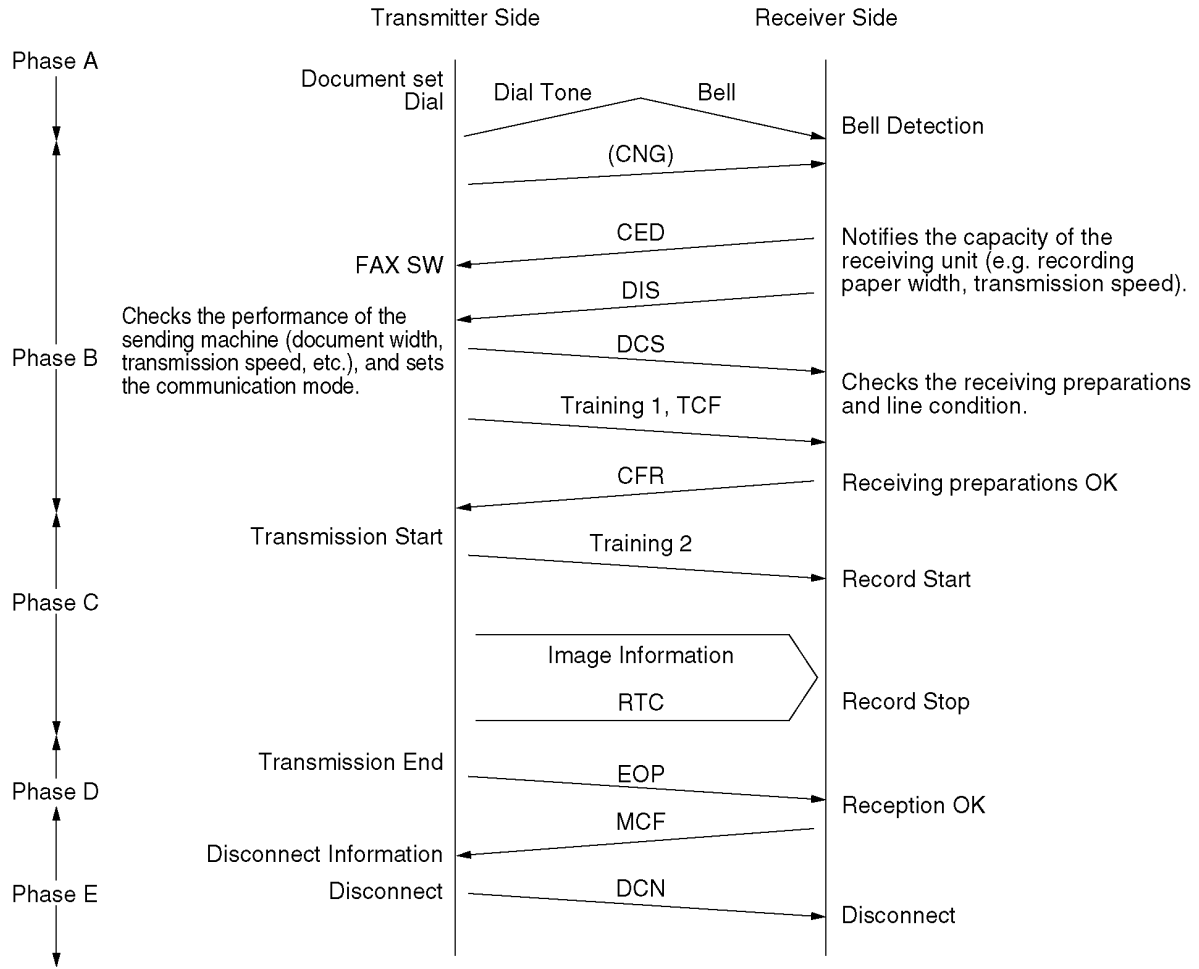

#### 6. Explanation of Communication and Compression Technology

##### a. G3 Communication Signals (T. 30 Binary Process)

For G3 Facsimile communication, this is the procedure for exchanging control signals between the sending and receiving machines both before and after transmission of image signals.

Control signals at 300 bps FSK are: 1850 Hz...0, 1650Hz...1.

An example of a binary process in G3 communication is shown below.

**Explanation of Signals**

Control signals are comprised mainly of 8-bit identification signals and the data signals added to them. Data signals are added to DIS and DCS signals.

Signal.....DIS (Digital Identification Signal)

Identification Signal Format.....00000001

**Function:**

Notifies the capacity of the receiving unit. The added data signals are as follows.

Signal.....DCS (Digital Command Signal)

Identification Signal Format.....X1000001

**Example**

(Some models do not support the following items.):

Bit No.	DIS/DTC	DCS
1	Transmitter --- T.2 operation	
2	Receiver --- T.2 operation	Receiver --- T.2 operation
3	T.2 IOC = 176	T.2 IOC = 176

Note 1 - Standard facsimile units conforming to T.2 must have the following capability: Index of cooperation (IOC)=264.

Note 2 - Standard facsimile units conforming to T.3 must have the following capability: Index of cooperation (IOC)=264.

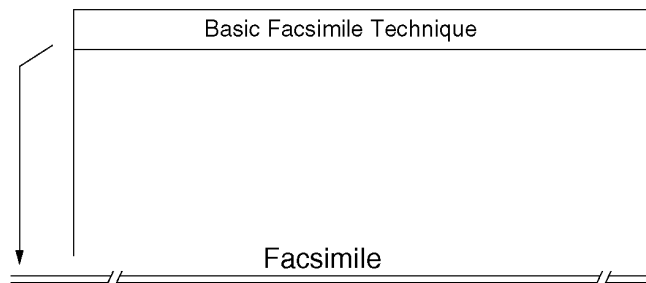

Note 3 - Standard facsimile units conforming to T.4 must have the following capability: Paper length=297 mm.

Signal	Identification Signal Format	Function
Training 1	_____	A fixed pattern is transmitted to the receiving side at a speed (2400 to 14400 bps) designated by DCS, and the receiving side optimizes the automatic equalizer, etc., according to this signal.
TCF (Training Check)	_____	Sends 0 continuously for 1.5 seconds at the same speed as the training signal.
CFR (Confirmation to Receive)	X0100001	Notifies the sending side that TCF has been properly received. If TCF is not properly received, FTT (Failure To Train) X0100010 is relayed to the sender. The sender then reduces the transmission speed by one stage and initiates training once again.
Training 2	_____	Used for reconfirming the receiving side like training 1.
Image Signal	Refer to the next page.	_____
RTC (Return to Control)	_____	Sends 12 bits (0..01 x 6 times) to the receiver at the same speed as the image signal and notifies completion of transmission of the first sheet.
EOP (End of Procedure)	X1110100	End of one communication
MCF (Message Confirmation)	X0110001	End of 1 page reception
DCN (Disconnect)	X1011111	Phase E starts.
MPS (Multi-Page Signal)	X1110010	Completion of transmission of 1 page. If there are still more documents to be sent, they are output instead of EOP. After MCF reception, the sender transmits an image signal of the second sheet.
PRI-EOP (Procedural Interrupt-EOP)	X1111100	If there is an operator call from the sender, it is output after RTC.
PIP (Procedural Interrupt Positive)	X0110101	This is output when an operator call is received.

#### b. Redundancy Compression Process Coding Mode

This unit uses one-dimensional MH format.

ABC Corporation  
Engineering Department  
1234 Harvard Avenue

Gentleman:

Presently we are planning to purchase facsimile system.

It is my pleasure to announce that we have decided on your products.

We would be grateful if you could send us a complete list of the latest models and specifications of your facsimile machines.

Since we would like to utilize them this coming season, your early reply will be very appreciated.

Very truly yours,

John Smith  
Manager of Facsimile Department

## 8.6.2. ITU-T No.1 TEST CHART

### THE SLEREXE COMPANY LIMITED

SAPORS LANE - BOOLE - DORSET - BH 25 8 ER

TELEPHONE BOOLE (945 13) 51617 - TELEX 123456

Our Ref. 350/PJC/EAC

18th January, 1972.

Dr. P.N. Cundall,  
Mining Surveys Ltd.,  
Holroyd Road,  
Reading,  
Berks.

Dear Pete,

Permit me to introduce you to the facility of facsimile transmission.

In facsimile a photocell is caused to perform a raster scan over the subject copy. The variations of print density on the document cause the photocell to generate an analogous electrical video signal. This signal is used to modulate a carrier, which is transmitted to a remote destination over a radio or cable communications link.

At the remote terminal, demodulation reconstructs the video signal, which is used to modulate the density of print produced by a printing device. This device is scanning in a raster scan synchronised with that at the transmitting terminal. As a result, a facsimile copy of the subject document is produced.

Probably you have uses for this facility in your organisation.

Yours sincerely,

P.J. CROSS  
Group Leader - Facsimile Research

# 11 ACCESSORIES AND PACKING MATERIALS

# 12 REPLACEMENT PARTS LIST

RTL (Retention Time Limited)

Notes:

- The marking (RTL) indicates that the Retention Time is limited for this item.

After the discontinuation of this assembly in production, the item will continue to be available for a specific period of time. The retention period of availability is dependent on the type of assembly, and in accordance with the laws governing parts and product retention.

After the end of this period, the assembly will no longer be available.

- Important safety notice

Components identified by  $\triangle$  mark have special characteristics important for safety. When replacing any of these components, use only manufacture's specified parts.

- The S mark means the part is one of some identical parts. For that reason, it may be different from the installed part.

- ISO code (Example : ABS-HB) of the remarks column shows quality of the material and a flame resisting grade about plastics.

- RESISTORS & CAPACITORS

Unless otherwise specified;

All resistors are in ohms ( $\Omega$ ) k=1000 $\Omega$ , M=1000k $\Omega$

All capacitors are in MICRO FARADS ( $\mu$ F) P= $\mu$  $\mu$ F

### Note:

Tools and Extension Cords are useful for servicing.  
(They make servicing easy.)

## 13 FOR THE SCHEMATIC DIAGRAMS

**Note:**

1. DC voltage measurements are taken with an oscilloscope or a tester with a ground.
2. The schematic diagrams and circuit board may be modified at any time with the development of new technology.
- 3.

**Important safety notice**

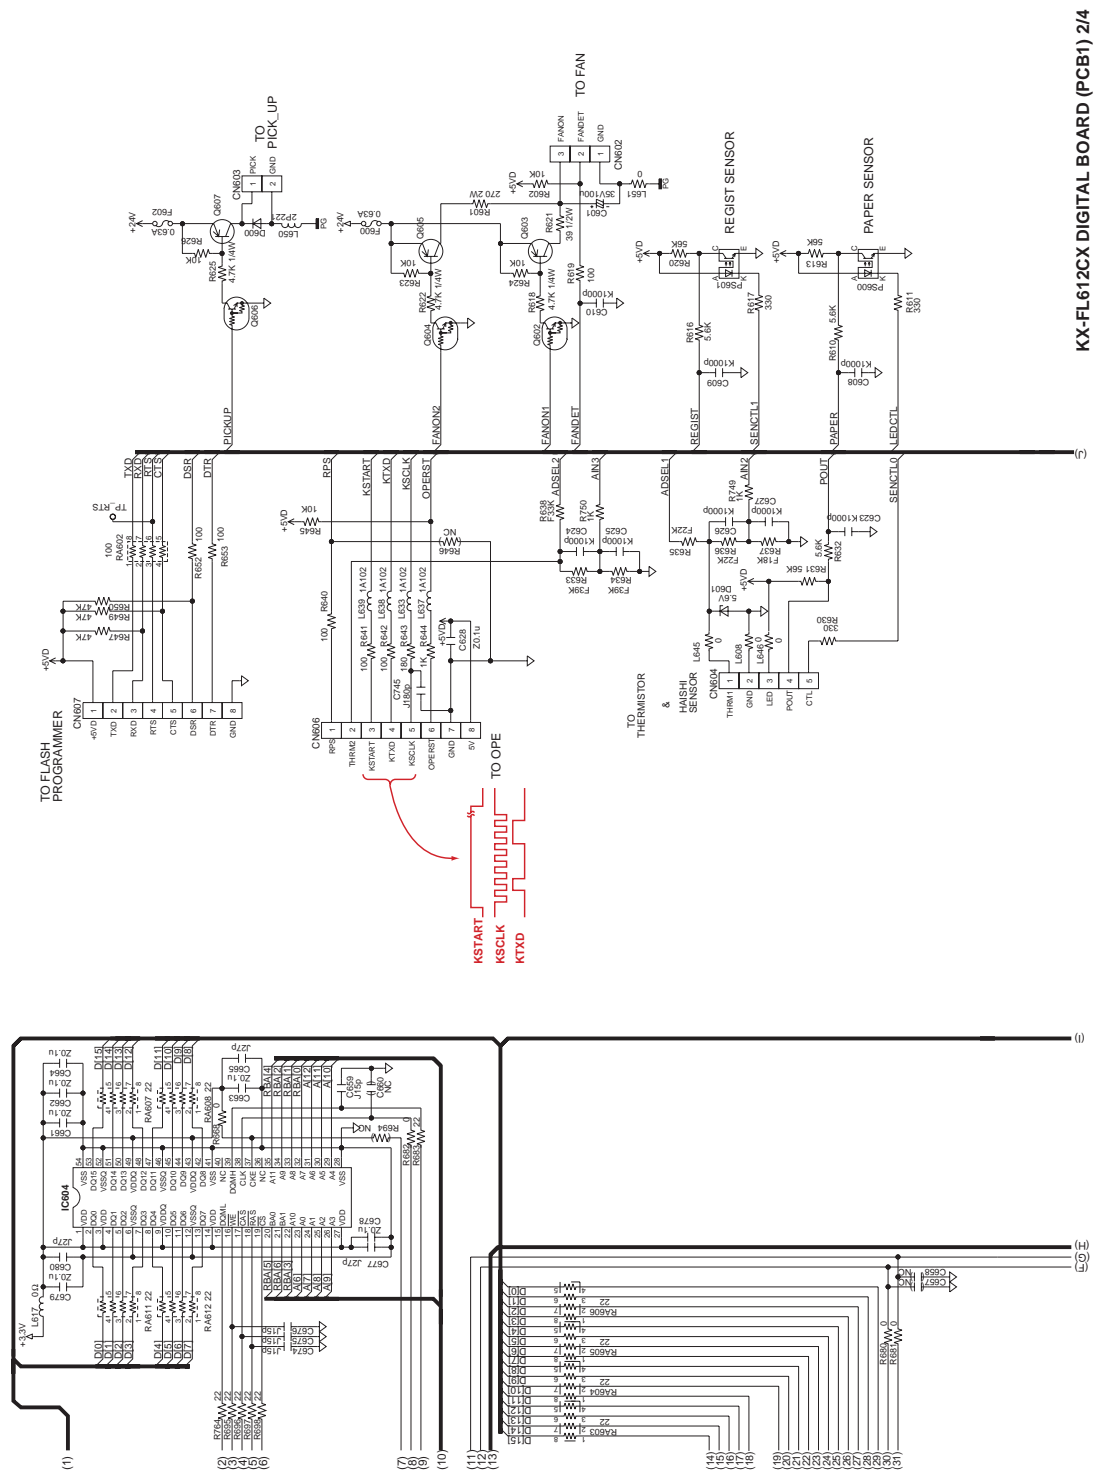

Components identified by  $\triangle$  mark have special characteristics important for safety. When replacing any of these components, use only the manufacturer's specified parts.

**Memo**

# 16 PRINTED CIRCUIT BOARD

## 16.1. DIGITAL BOARD (PCB1)

### 16.1.1. DIGITAL BOARD: COMPONENT VIEW

KX-FL612CX DIGITAL BOARD (PCB4) COMPONENT VIEW

16.1.2. DIGITAL BOARD: BOTTOM VIEW

KX-FL612CX DIGITAL BOARD (PCB4) BOTTOM VIEW

16.2.2. ANALOG BOARD: BOTTOM VIEW

KX-FL612CX ANALOG BOARD (PCB2) BOTTOM VIEW

### 16.3. OPERATION BOARD (PCB3)

#### 16.3.1. OPERATION BOARD:COMPONENT VIEW

KX-FL612CX OPERATION BOARD (PCB3) COMPONENT VIEW

16.3.2. OPERATION BOARD:BOTTOM VIEW

KX-FL612CX OPERATION BOARD (PCB3) BOTTOM VIEW

### 16.4. HIGH VOLTAGE POWER SUPPLY BOARD (PCB4)

#### 16.4.1. HIGH VOLTAGE POWER SUPPLY BOARD:COMPONENT VIEW

KX-FL612CX HIGH VOLTAGE POWER SUPPLY BOARD (PCB4) COMPONENT VIEW

16.4.2. HIGH VOLTAGE POWER SUPPLY BOARD:BOTTOM VIEW

KX-FL612CX HIGH VOLTAGE POWER SUPPLY BOARD (PCB4) BOTTOM VIEW

16.5. LOW VOLTAGE POWER SUPPLY BOARD (PCB5)

16.5.1. LOW VOLTAGE POWER SUPPLY BOARD:COMPONENT VIEW

KX-FL612CX LOW VOLTAGE POWER SUPPLY BOARD (PCB5) COMPONENT VIEW

16.5.2. LOW VOLTAGE POWER SUPPLY BOARD:BOTTOM VIEW

KX-FL612CX LOW VOLTAGE POWER SUPPLY BOARD (PCB5) BOTTOM VIEW

### 16.6. EXIT SENSOR BOARD PARTS (PCB6)

PFUP1331ZB-B (PFUP1331YA-B)  
KX-FL612CX EXIT SENSOR BOARD (PCB6)

### 16.7. DRUM AND TONER SENSOR BOARD (PCB7)

PFUP1331ZB-C (PFUP1331YA-C)  
KX-FL612CX DRUM AND TONER SENSOR BOARD/PCB7

### 16.8. VARISTOR BOARD (PCB8)

PFUP1331ZB-D (PFUP1331YA-D)  
KX-FL612CX VARISTOR BOARD (PCB8)
